

# 3/2, 4/2 and 4/3 directional valves, internally pilot operated, externally pilot operated

**RE 24751/08.08**  
Replaces: 02.03

1/38

## Types 4WEH and 4WH

Sizes 10 to 32  
Component series 4X; 6X; 7X  
Maximum operating pressure 350 bar [5076 psi]  
Maximum flow 1100 l/min [290 US gpm]

H6092+5589

## Table of contents

Content	Page
Features	1
Ordering code	2, 3
Spool symbols	4 to 8
Function, section	9 to 11
Pilot oil supply	12, 13
Technical data	14 to 16
Switching times	16
Characteristic curves, performance limits	17 to 26
Unit dimensions	27 to 33
Stroke adjustment, attachment options	34, 35
Switching time adjustment	36
Pressure reducing valve "D3"	36
Pre-load valve	37

## Features

- 2 types of actuation:
  - Electrohydraulic (type WEH)
  - Hydraulic (type WH)
- For subplate mounting
- Porting pattern to ISO 4401 and NFPA T3.5.1 R2
- For subplates to data sheets RE 45054 to RE 45060 (separate order), see page 32
- Spring- or pressure-centering, spring end position or hydraulic end position
- Wet-pin DC or AC voltage solenoids, optional
- Manual override, optional
- Electrical connection as individual or central connection, see RE 23178 and RE 08010
- Switching time adjustment, optional
- Pre-load valve in channel P of main valve, optional
- Stroke adjustment of main spool, optional
- Stroke adjustment and/or end position control, optional
- Inductive position switches and proximity sensors (contactless), see RE 24830

## Function, section: Type 4WEH

### Directional valves of type 4WEH...

Valves of type WEH are directional spool valves with electro-hydraulic actuation. They control the start, stop and direction of a flow.

These directional valves basically consist of the main valve with housing (1), main control spool (2), one or two return springs (3.1) and (3.2), as well as pilot valve (4) with one or two solenoids "a" (5.1) and/or "b" (5.2).

Main control spool (2) in the main valve is held in the zero or initial position by springs or through pressurization. In the depressurized condition, the two spring chambers (6) and (8) are pressureless and connected to the tank via pilot valve (4). The pilot valve is supplied with pilot oil via pilot line (7). The supply can be provided internally or externally (externally via port X).

When the pilot valve is operated, e.g. solenoid "a", pilot spool (10) is pushed to the left and spring chamber (8) is therefore pressurized to pilot pressure. Spring chamber (6) remains pressureless.

The pilot pressure acts on the left side of main control spool (2) and shifts the latter against spring (3.1). In the main valve, port P is consequently connected to B and A to T.

When the solenoid is de-energized, pilot spool (10) returns to its starting position (except for impulse spool). Spring chamber (8) is unloaded to the tank.

The pilot oil is drained internally (via channel T) or externally (via channel Y).

An optional manual override (9) allows pilot spool (10) to be moved without energization of the solenoid.

#### Note!

Return springs (3.1) and (3.2) in spring chambers (6) and (8) hold the main control spool (2) in the central position, even if the valve is arranged, for example, vertically.

**Pilot oil supply** (sections A – A and B – B), see pages 12 and 13.

## Function, section: Type 4WH

### Directional valves of type 4WH...

Valves of type WH are directional spool valves with hydraulic actuation. They control the start, stop and direction of a flow.

These directional valves basically consist of valve housing (1), main control spool (2), one or two return springs (3.1) and (3.2) on valves with spring return or spring centering, as well as reconnection plate (11).

The main control spool (2) is actuated directly through pressurization.

Main control spool (2) is held in the zero or initial position by springs or through pressurization. The pilot oil is supplied and drained externally (see page 12).

### 4/3 directional valve with spring centering of the pilot spool

With this version, main control spool (2) is held by two return springs (3.1) and (3.2) in the zero position. The two spring chambers (6) and (8) are connected via reconnection plate (11) to ports X and Y.

When main control spool (2) is pressurized to pilot pressure on one of the two front faces, it is pushed to the operated position. The connections within the valve are established as required.

When the pressurized spool is depressurized, the spring on the opposite side causes the spool to be returned to the zero or initial position.

**Pilot oil supply** (sections A – A and B – B), see pages 12 and 13.

## Function, section: Type 4WEH...H

### 4/3 directional valves with pressure-centering of the main control spool, type 4WEH...H

Main control spool (2) in the main valve is held in the zero position through pressurization of the two spool faces. Centering bushing (12) is supported within the housing and holds the spool in position.

By depressurization of one spool face, main control spool (2) is brought to the operated position.

The unloaded spool area displaces the returning pilot oil via the pilot valve into channel Y (external).

#### Note!

In this variant, springs (3.1) and (3.2) do not assume a return function. They hold the horizontally installed main control spool (2) in the central position when de-pressurized.

## Pilot oil supply

**NG10**

**NG16**

**NG25** (type 4W.H 22 .7X/...)

**NG25** (type 4W.H 25 .6X/...)

**NG32**

**Pilot oil supply**

External: 2 closed  
 internal: 2 open

**Pilot oil drain**

External: 1 closed  
 Internal: 1 open

For further details and explanations of items, see next page.

## Pilot oil supply

### Type 4WH...

The pilot oil is supplied and drained **externally** via channels X and Y.

### Type 4WEH...

The pilot oil is supplied **externally** - via channel X - from a separate pressure supply.

The pilot oil is drained **externally** - via channel Y - to the tank.

### Type 4WEH...E...

The pilot oil is supplied **internally** from channel P of the main valve. (See page 15, footnotes <sup>8)</sup> and <sup>9)</sup>)

The pilot oil is drained **externally** - via channel Y - to the tank. Port X in the subplate is plugged.

### Type 4WEH...ET...

The pilot oil is supplied **internally** from channel P of the main valve.

The pilot oil is drained **internally** - via channel T - to the tank. Ports X and Y in the subplate are plugged.

### Type 4WEH...T...

The pilot oil is supplied **externally** - via channel X - from a separate pressure supply.

The pilot oil is drained **internally** - via channel T - to the tank. Port Y in the subplate is plugged.

- 1 Plug screw M6, 3 A/F  
– pilot oil drain
- 2 Plug screw M6, 3 A/F  
– pilot oil supply

- 3 Pilot valve
- 4 Main valve
- 5 Cover
- 6 Throttle insert

**Tightening torques  $M_T$**  for cover mounting screws:

**NG16:** 35 Nm [25.8 ft-lbs]; **NG25:** 68 Nm [50.2 ft-lbs]

**Tightening torques  $M_T$**  for mounting screws of the pilot valve: **NG10 to 32:** 9 Nm [6.6 ft-lbs]

### Throttle insert

The use of throttle insert (6) is required, if the pilot oil supply in channel P of the pilot valve is to be restricted (see below).

Throttle insert (6) is to be installed in channel P of the pilot valve.

### ⚠ Attention!

The pilot oil supply may only be changed by authorized specialists or in the factory!

- **External** pilot oil supply X or drain Y:
  - For NG10, version SO30 must be provided for the use of sandwich plates. Code SO30 must be entered at the end of the type designation (sandwich plate).
  - Make sure that the permissible maximum parameters of the pilot valve are not exceeded (see RE 23178)!
  - Maximum pilot pressure: Please observe page 14!
- Internal pilot oil **supply** (versions “ET” and “E”):
  - Minimum pilot pressure: Please observe page 15!
  - To avoid impermissibly high pressure peaks, a **throttle insert “B10”** must be provided in port P of the pilot valve (see above) .
  - In conjunction with version “H-“, **pressure reducing valve “D3”** must be provided additionally (see page 36).

**Technical data** (for applications outside these parameters, please consult us!)

<b>General</b>

3-position valve, pressure-centered		bar [psi]	–	14 [203]	–	18 [261]	8,5 [123]
2-position valve with spring end position	Type H-4WEH...	bar [psi]	10 [145]	14 [203]	14 [203]	13 [188]	10 [145]
	Type 4WEH...	bar [psi]	10 [145]	14 [203]	11 [159]	13 [188]	10 [145]
2-position valve with hydraulic end position		bar [psi]	7 [101]	14 [203]	8 [116]	8 [116]	5 [72]
– Pilot oil supply X internal (with spools C, F, G, H, P, T, V, Z, S <sup>7)</sup> )		bar [psi]	4.5 [65] 8)	4.5 [65] 9)	4.5 [65] 9)	4.5 [65] 9)	4.5 [65] 9)

1) With 3-position valve, pressure-centering is only possible, if  $p_{St} \geq 2 \times p_{Tank} + p_{St min}$ .

2) The ignition temperature of the process and operating medium used must be higher than the maximum solenoid surface temperature.

3) Suitable for NBR **and** FKM seals

4) Suitable **only** for FKM seals

5) The cleanliness classes specified for components must be adhered to in hydraulic systems. Effective filtration prevents malfunction and, at the same time, prolongs the service life of components.

For the selection of filters, see data sheets RE 50070, RE 50076, RE 50081, RE 50086, RE 50087 and RE 50088.

6) – Internal pilot oil **supply**:

- In the case of a higher pilot pressure, a pressure reducing valve "D3" must be used.
- In conjunction with version "H-", **pressure reducing valve "D3"** must be provided additionally. (If not used, pilot pressure = operating pressure in the port)

– External pilot oil **supply**:

- In conjunction with version "H-", the adherence to the maximum pilot pressure must be ensured by taking suitable measures (e.g. installation of a pressure relief valve to protect the separate pilot oil circuit)!

7) Spool S only for NG16

8) With symbols C, F, G, H, P, T, V, Z, an internal pilot oil supply is only possible, if the flow from P to T in the central position (with 3-position valve) or while passing the central position (with 2-position valve) is so high that the pressure differential from P to T reaches a value of at least 6.5 bar [94 psi].

9) For spools C, F, G, J, H, P, T, V, Z, S<sup>7)</sup> – by means of pre-load valve (not NG10) or correspondingly greater flow. (For the establishment of the required flow, see characteristic curves "Pre-load valve" on page 37.)

**Technical data** (for applications outside these parameters, please consult us!)

Pilot oil flow for shortest switching time, ca.	l/min [US gpm]		35 [9.2]	35 [9.2]	35 [9.2]	35 [9.2]	45 [11.9]

**Switching times** (= closing of contact on the pilot valve until the control land starts to open in the main valve and change of spool stroke by 95%)

Pilot pressure		bar [psi]	70 [1015]	210 [3046]	250 [3626]	Spring
			ON			OFF
NG10	– Without throttle insert	ms	40 to 60	–	40 to 60	20 to 30
	– With throttle insert	ms	60 to 90	–	50 to 70	20 to 30
NG16	– Without throttle insert	ms	50 to 80	–	40 to 60	50 to 80
	– With throttle insert	ms	110 to 130	–	80 to 100	50 to 80
NG25 (4W.H 22)	– Without throttle insert	ms	40 to 70	40 to 60	–	50 to 70
	– With throttle insert	ms	140 to 160	80 to 110	–	50 to 70
NG25 (4W.H 25)	– Without throttle insert	ms	70 to 100	–	50 to 70	100 to 130
	– With throttle insert	ms	200 to 250	–	120 to 150	100 to 130
NG32	– Without throttle insert	ms	80 to 130	–	70 to 100	140 to 160
	– With throttle insert	ms	420 to 560	–	230 to 350	140 to 160

**Notes!**

- The switching times are measured in accordance with ISO 6403 with HLP46,  $\vartheta_{oil} = 40 \text{ °C} \pm 5 \text{ °C}$  [104 °F  $\pm$  9 °F]. At different oil temperatures, deviations are possible!
- The switching times were established using DC voltage solenoids. They are reduced by ca. 20 ms when AC voltage solenoids are used.

- The de-energization of the solenoid generates voltage peaks, which can be prevented by installing suitable diodes.
- When pressure reducing valve "D3" is used, the switching times increase by ca. 30 ms.
- The switching times were established under ideal conditions and can deviate within the system depending on the operating conditions.

## Performance limits: Important notes

### General:

#### ⚠ Attention!

The specified switching performance limits are valid for operation with two directions of flow (e.g. from P to A and simultaneous return flow from B to T in the ratio of 1:1).

Due to the flow forces acting within the valve, the permissi-

ble switching performance limits may be considerably lower with only one direction of flow (e.g. from P to A while port B is blocked with flow in only one direction or different flows)!

In the case of such applications, please consult us!

**The switching performance limit was established when the solenoids were at operating temperature, at 10% undervoltage and without tank pre-loading.**

#### ⚠ Attention!

<b>NG16</b>	<ul style="list-style-type: none"> <li>- With <b>X internal</b> pilot oil supply, a pre-load valve must be used at flows &lt; 160 l/min [42 US gpm] due to the negative overlap of spools C, Z and HC, HZ.</li> <li>- When 4/3 directional valves with pressure-centered control spool in the main valve are used beyond the specified performance limit, a higher pilot pressure is required. At, for example, an operating pressure of <math>p_{\max} = 350</math> bar [5076 psi] and a flow of <math>q_v = 300</math> l/min [79 US gpm] a pilot pressure of 16 bar [232 psi] is required. The maximum flow for these valves therefore depends on the <math>\Delta p</math> value, which is acceptable for the system.</li> <li>- With <b>X internal</b> pilot oil supply, a pre-load valve must generally be used (see page 37) due to the negative overlap of spools F, G, H, J, P, S, and T.</li> </ul>
<b>NG25</b>	<ul style="list-style-type: none"> <li>- With <b>X internal</b> pilot oil supply, a pre-load valve must be used at flows &lt; 180 l/min [47.5 US gpm] due to the negative overlap of spools Z, HZ, and V.</li> <li>- With <b>X internal</b> pilot oil supply, a pre-load valve must generally be used due to the negative overlap of spools C, HC, F, G, H, P, and T.</li> </ul>
<b>NG32</b>	<ul style="list-style-type: none"> <li>- With <b>X internal</b> pilot oil supply, a pre-load valve must be used at flows &lt; 180 l/min [47.5 US gpm] due to the negative overlap of spools Z, HZ, and V.</li> <li>- When 4/3 directional valves with pressure-centered control spool in the main valve are used beyond the specified performance limit, a higher pilot pressure is required. At, for example, an operating pressure of <math>p_{\max} = 350</math> bar [5076 psi] and a flow of <math>q_v = 1100</math> l/min [290 US gpm] a pilot pressure of 15 bar [217 psi] is required. ## Unit dimensions

- 1 Main valve
- 2 Pilot valve type 4WE 6 ...  
to data sheet RE 23178:
- 2.1 – Pilot valve type 4WE 6 D... (1 solenoid)  
for main valves with spools C, D, K, Z  
spools HC, HD, HK, HZ
- Pilot valve type 4WE 6 JA... (1 solenoid "a")  
for main valves with spools EA, FA, etc.,  
spring return
- Pilot valve type 4WE 6 MT... (1 solenoid "a")  
for main valves with spools HEA, HFA, etc.,  
hydraulic Spool return
- 2.2 – Pilot valve type 4WE 6 Y... (1 solenoid)  
for main valves with spool Y  
spool HY
- Pilot valve type 4WE 6 JB... (1 solenoid "b")  
for main valves with spools EB, FB, etc.,  
spring return
- Pilot valve type 4WE 6 MB... (1 solenoid "b")  
for main valves with spools HEB, HFB, etc.,  
hydraulic spool return
- 2.3 – Pilot valve type 4WE 6 J... (2 solenoids)  
for main valves with 3 spool positions, spring-  
centered
- Pilot valve type 4WE 6 M... (2 solenoids)  
for main valves with 3 spool positions,  
pressure-centered
- 3.1 Solenoid "a"
- 3.2 Solenoid "b"
- 4 Manual override "N", optional
- The manual override can only be actuated up to a  
tank pressure of ca. 50 bar. Avoid damage to the  
bore for the manual override! (Special tool for oper-  
ation, separate order, Material no. **R900024943**).  
When the manual override is blocked, operation of  
the solenoids must be ruled out!
- The simultaneous operation of the solenoids must  
be ruled out!
- 5 Solenoid **without** manual override
- 6 Solenoid **with** manual override
- 7 Height of reconnection plate for hydraulic operation  
(type 4WH...)
- 8 Switching time adjustment (6 A/F), optional
- 9 Pressure reducing valve, optional
- 10.1 Machined valve mounting face; porting pattern to  
ISO 4401-05-05-0-05 and NFPA T3.5.1 R2-D05
- 10.2 Machined valve mounting face; porting pattern  
to ISO 4401-07-07-0-05 and NFPA T3.5.1 R2-D07
- 10.3 Machined valve mounting face; porting pattern to  
ISO 4401-08-08-0-05 and NFPA T3.5.1 R2-D08

### Valve mounting screws (separate order)

– NG10:

**4 hexagon socket head cap screws, metric**  
**ISO 4762 - M6 x 45 - 10.9-fZn-240h-L**  
 (Friction coefficient  $\mu_{\text{total}} = 0.09$  to  $0.14$ );  
 tightening torque  $M_T = 12.5 \text{ Nm}$  [ $9.2 \text{ ft-lbs}$ ]  $\pm 10\%$ ,  
 Material no. **R913000258**

**4 hexagon socket head cap screws, UNC**  
**1/4-20 UNC x 1 3/4" ASTM-A574**  
 on request

– NG16:

**4 hexagon socket head cap screws, metric**  
**ISO 4762 - M10 x 60 - 10.9-fZn-240h-L**  
 (Friction coefficient  $\mu_{\text{total}} = 0.09$  to  $0.14$ );  
 tightening torque  $M_T = 75 \text{ Nm}$  [ $55.3 \text{ ft-lbs}$ ]  $\pm 10\%$ ,  
 Material no. **R913000116**

**2 hexagon socket head cap screws metric**  
**ISO 4762 - M6 x 60 - 10.9-fZn-240h-L**  
 (Friction coefficient  $\mu_{\text{total}} = 0.09$  to  $0.14$ );  
 tightening torque  $M_T = 12.5 \text{ Nm}$  [ $9.2 \text{ ft-lbs}$ ]  $\pm 10\%$ ,  
 Material no. **R913000115**

**4 hexagon socket head cap screws, UNC**  
**3/8-16 UNC x 2 1/4" ASTM-A574**  
 on request

**2 hexagon socket head cap screws, UNC**  
**1/4-20 UNC x 2 1/4" ASTM-A574**  
 on request

– NG25:

**6 hexagon socket head cap screws, metric**  
**ISO 4762 - M12 x 60 - 10.9-fZn-240h-L**  
 (Friction coefficient  $\mu_{\text{total}} = 0.09$  to  $0.14$ );  
 tightening torque  $M_T = 130 \text{ Nm}$  [ $95.9 \text{ ft-lbs}$ ]  $\pm 10\%$ ,  
 Material no. **R913000121**

**6 hexagon socket head cap screws, UNC**  
**1/2-13 UNC x 2 1/2" ASTM-A574**  
 on request

– NG32:

**6 hexagon socket head cap screws, metric**  
**ISO 4762 - M20 x 80 - 10.9-fZn-240h-L**  
 (Friction coefficient  $\mu_{\text{total}} = 0.09$  to  $0.14$ );  
 tightening torque  $M_T = 430 \text{ Nm}$  [ $317.2 \text{ ft-lbs}$ ]  $\pm 10\%$ ,  
 Material no. **R901035246**

**6 hexagon socket head cap screws, UNC**  
**3/4-10 UNC x 3 1/4" ASTM-A574**  
 on request

### Stroke adjustment, attachment options (dimensions in mm [inch])

The stroke adjustment feature limits the stroke of control spool (1). To reduce the spool stroke, loosen locknut (2) and turn adjustment screw (3) clockwise. Control chamber (4) must be depressurized during this process.

NG	L4
10	6,5 [0.26]
16	10 [0.39]
25 (type 4W.H 22)	9,5 [0.37]
25 (type 4W.H 25)	12,5 [0.49]
32	15 [0.59]

For further dimensions, see below and page 35.

#### 5 Adjustment range

- NG10:  
1 turn = 1 mm [0.0394 inch] adjustment travel
- NG16 and 32:  
1 turn = 1.5 mm [0.0591 inch] adjustment travel

Stroke limitation on side A

Stroke limitation on side B

1) Types 4WEH 22... and 4WH 22...

2) Types 4WEH 25... and 4WH 25...

## Switching time adjustment

The switching time of main valve (1) can be influenced by using a double throttle check valve (2) (type Z2FS 6 to data sheet RE 27506).

Conversion of meter-in (3) into meter-out control (4):

Remove pilot valve (5) – plate (6) for accommodating the seal rings remains in place – turn switching time adjustment feature (2) around its longitudinal axis and put it down again, re-mount pilot valve (5) .

Tightening torque of screws (7)  $M_T = 9 \text{ Nm}$  [6.6 ft-lbs].

Type 4WEH 10 ..4X/...S  
Type 4WEH 10 ..4X/...S2

### ⚠ Attention!

The conversion may only be carried out by authorized specialists or in the factory!

## Pressure reducing valve "D3"

Pressure reducing valve (8) must be used in the case of a pilot pressure above 250 bar [3626 psi] (with type 4WEH 22 ...: 210 bar [3046 psi]) and version "H-".

The secondary pressure is held constant at 45 bar [652 psi].

### ⚠ Attention!

When a pressure reducing valve "D3" (8) is used, a throttle insert "B10" must be provided in the P channel of the pilot valve.

Tightening torque of screws (7)  $M_T = 9 \text{ Nm}$  [6.6 ft-lbs].

Type 4WEH 10 ..4X/.../...D3

### Pre-load valve (not for NG10)

For valves with pressureless circulation and internal pilot oil supply, a pre-load valve (9) must be installed in channel P of the main valve to build up the minimum pilot pressure.  
The pressure differential of the pre-load valve must be added

to the pressure differential of the main valve (see characteristic curves) to obtain a total value.  
The cracking pressure is ca. 4.5 bar [65 psi].

- 9.1 Pre-load valve NG16
- 9.2 Pre-load valve NG25 and NG32
- 10 Main valve
- 11 Suplate

Type	Material number P4,5
4W.H 16 ...	R901002365
4W.H 22 ...	R900315596
4W.H 25 ...	R900303717
4W.H 32 ...	R900317066

$\Delta p-q_v$  characteristic curve (measured with HLP46,  $\vartheta_{oil} = 40 \text{ °C} \pm 5 \text{ °C}$  [104 °F  $\pm$  9 °F])

- 1 NG16
- 2 NG25 (type 4W.H 25 ...)
- 3 NG25 (type 4W.H 22 ...)
- 4 NG32
