

The LCC 1000 is our 10-metre cabin landing craft, combining excellent cargo capacity and direct shore access with the comfort and protection of an enclosed cabin. Designed for efficient transport of personnel, vehicles, equipment and supplies between ship and shore, it is a highly versatile platform for commercial, military, rescue and professional operations. The enclosed cabin provides excellent protection from wind, rain and harsh weather conditions, creating a comfortable and protected working environment for the operator and crew. Excellent all-round visibility supports safe manoeuvring during navigation, beach approaches and landing operations, while the cabin provides a secure location for navigation, communication and mission-specific equipment.

Layout	Cabin
