

ABB motors
Low voltage general performance motors
for hazardous area

Power and productivity
for a better world™

ABB

Making you more competitive

ABB has been manufacturing motors for over 100 years. Our products are designed to be reliable, efficient and cost effective, and we can supply motors for practically any application. A full range of services is available through our worldwide service organization, with the latest eBusiness systems providing round-the-clock access, easy ordering and fast delivery.

M2000 motors

Our M2000 range offers quality motors, providing you with the ideal efficiency level for your needs. And our 24-hour availability helps make your life easier. Through our extended support and services such as eBusiness solutions and an efficient global stock concept, we provide you with easy ordering and quick delivery.

The Leader in Motors

ABB is a global engineering and technology group serving customers in electrical power generation; transmission and distribution; automation; oil, gas and petrochemicals; industrial products and contracting; and financial services. The product range includes a full range of industrial electric motors, both AC and DC, LV and HV meeting the needs of most application, with virtually any power rating.

Within the Group, ABB Motors is the world's leading manufacturer of low-voltage induction motors, having over 100 years experience and a presence in more than 100 countries. ABB Motors's broad understanding of customer applications enables it to work closely to solve individual problems or to supply custom-designed motors for any project-no matter how demanding.

For customers, this all represents a solid value and commitment revealed in the dependable quality of ABB Motor's products and in its unrivalled customer service and back up. The hallmarks of its product are efficiency, robustness and reliability, combined to represent the best value available. Customers the world over rely on ABB Motors as the most solid and reliable supplier of electric motors. But above all, ABB Motors values its customers.

The best value is also enhanced by ABB Motors's worldwide customer service network guaranteeing fast delivery, rapid response and local back-up, as well as by worldwide ABB Service network supporting the after sales service.

ABB Motors has manufacturing facilities in Finland, Italy, Spain, Sweden, China and India. The comprehensive Motor stocks at each of these sites are reinforced by large and versatile stocks at Central Stock Nordic in Västerås, Sweden; Central Stock, Europe in Menden, Germany and Central Stock Asia in Singapore, and by numerous distribution stocks.

Industrial

As a key element of its business strategy, ABB has committed to a broad program of product development and positioning under the Industrial^{IT} umbrella. This initiative is geared towards increasing integration of ABB products as the "building blocks" of larger solutions, while incorporating functionality that will allow multiple products to interact seamlessly as components of real-time automation and information systems.

Motors and generators represent one of the fundamental building blocks in the Industrial^{IT} architecture.

ABB (www.abb.com) is a leader in power and automation technologies that enable utility and industry customers to improve performance while lowering environmental impacts. The ABB Group of companies operates in around 100 countries and employs about 107,000 peoples.

ATEX Directives 94/9/EC ("95") and 1999/92/EC ("137")

ATEX Directives harmonize the safety rules in respect with the free trading principles of the European Community.

The responsibilities are split in two areas between the manufacturers and the end users. The manufacturers have to comply with the 'Essential Health and Safety Requirements' of the Products Directive 94/9/EC, or ATEX 95; and the end users must proceed to make an Explosion Protection Document based on risks assessment of their 'work places' and 'work equipment' to fulfill the 'minimum requirements' listed in the Worker Protection Directive 1999/92/EC or ATEX 137.

Motors comply fully with the ATEX product directive 94/9/EC. According to the regulations, low voltage motors for hazardous areas are exempted from the Low Voltage Directive, the EMC directive as well as the Machinery Directive.

IEC and the corresponding EN Standards are at the moment in a new process of renewal or revision. In general old and new standard or revision are both in parallel valid for about 3 years. This affects mostly the marking of the motor, occasionally also new technical requirements are introduced.

ABB refers to recently updated standards

In the implementation of ATEX 95 and ATEX 137 directives ABB refers to the IEC and EN standards which have been recently updated. Otherwise ABB refers to IEC standards.

Main standards for implementation Worker Protection Directive 1999/92/EC (ATEX 137)	
IEC/EN 60079-10	Classification of hazardous areas (gas areas)
IEC/EN 61241-10	Classification of areas where combustible dusts are or may be present
IEC/EN 60079-14	Installation rules of gas equipment
IEC/EN 61241-14	Selection and Installation of Ex tD (DIP) equipment.
IEC/EN 60079-17	Electrical installations Inspection and maintenance
IEC/EN 60079-19	Equipment Repair and overhaul

Motors for EU motor efficiency levels

A new Europe-wide agreement will ensure that the efficiency levels of electric motors manufactured in Europe are clearly displayed. In contrast to the American legislation on motor efficiency the European agreement does not establish mandatory efficiency levels. It basically establishes three classes giving motor manufacturers an incentive to qualify for a higher class.

ABB is one of only a handful of leading motor manufacturers in Europe, to have a motor range to meet or exceed the minimum efficiencies stated in the highest level of the EU agreement of LV motors.

EU efficiency classes for 2 pole motors.

Output KW	2-pole Boarderline EFF2/EFF3	EFF1/1FF2
1.1	76.2	82.8
1.5	78.5	84.1
2.2	81.0	85.6
3	82.6	86.7
4	84.2	87.6
5.5	85.7	88.6
7.5	87.0	89.5
11	88.4	90.5
15	89.4	91.3
18.5	90.0	91.8
22	90.5	92.2
30	91.4	92.9
37	92.0	93.3
45	92.5	93.7
55	93.0	94.0
75	93.6	94.6
90	93.9	95.0

IECEx Scheme

The IECEx Scheme is an International Certification Scheme covering both apparatus and services for explosive atmospheres, as the internationally accepted means of demonstrating claimed compliance with IEC standards. It comprises the following two international programs:

- IECEx Certified Equipment Program, covering Ex products
- IECEx Certified Service Facilities Program covering Ex Repair and Overhaul Workshops

It is a voluntary scheme which provides confidence that products and services covered by an IECEx certificate meet the specified requirements related to the hazardous area concerned (included Zone 2 / 22) as the internationally accepted means of demonstrating claimed compliance with an IEC Standard.

The management of this Scheme includes Certification Bodies of 26 countries around the world (experts, manufacturers, end users, regulators).

For more information please visit www.iecex.com.

ABB is relying on the IECEx Scheme and a large range of Ex motors are tested and certified according to this.

Main standards complying with the "EHSR's" of Products Directive 94/9/EC (ATEX 95)

EN 60079-0	General requirements for gas
EN 61241-0	General requirements for dust
EN 60079-1	Flame proof enclosure 'd'
EN 60079-2	Pressurized enclosure 'p'
EN 60079-7	Equipment protection by increased safety 'e'
EN 60079-15	Construction test and marking of type of protection 'n'
EN 61241-1	Protection by enclosure 'tD'

These efficiency levels apply to 2-and-4-pole three phase squirrel cage induction motors rated for 400V, 50Hz with S1 duty class with the output 1.1 to 90kW, which account for the largest volume on the market.

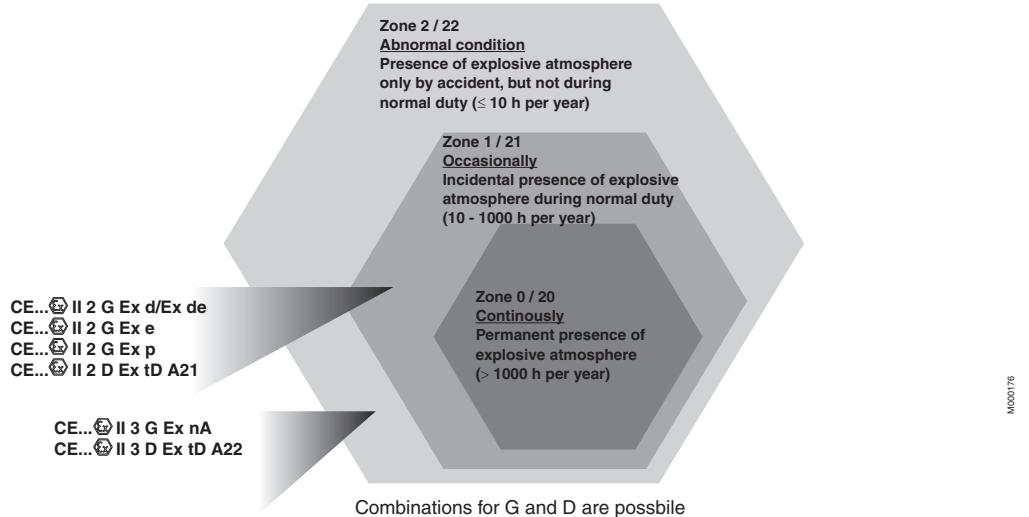

The efficiency of motor from different manufacturers are collated in a database EURODEEM, published by the European Commission. It is accessible over the internet at <http://jamest.jrc.it/projects/eem/eurodeem.htm>.

EU efficiency classes for 4 pole motors.

Output KW	4-pole Boarderline EFF2/EFF3	EFF1/1FF2
1.1	76.2	83.8
1.5	78.5	85.0
2.2	81.0	86.4
3	82.6	87.4
4	84.2	88.3

55	93.0	94.2
75	93.6	94.7
90	93.9	95.0

Hazardous areas

Hazardous areas worldwide are classified by zone, according to the risk posed by explosive gas or dust in the atmosphere.

Classification of hazardous locations according to CENELEC and IEC

The definition of areas according to the presence of atmosphere are set up in the following standards:

EN 60079-10	Gas
EN 61241-1	Dust
IEC 60079-10	Gas
IEC 61241-1	Dust

Explosive atmosphere	Permanent presence	Incidental presence (normal operation conditions)	Accidental presence (abnormal operation conditions)
Gas ('G')	Zone 0	Zone 1	Zone 2
Dust ('D' / 'DIP' / 'Ex tD')	Zone 20	Zone 21	Zone 22

Note: In certain countries Ex d and Ex e motors are also used in Zone 2.

Marking temperatures, gas groups and hazardous areas

To ensure equipment can be safely used in potentially explosive atmospheres, the hazardous areas where the equipment is installed must be known. Temperature class of equipment must be compared with the spontaneous ignition temperature of the gas mixtures concerned and its gas group must be known in specific cases (e.g. flame proof protection).

Categories or classification

The ATEX Directive has introduced the concept of "Categories" which is a way of expressing the capability of equipment respecting the EHSR versus the Zone where the equipment is installed.

Category 1	according to Annex 1 of ATEX 95 used in Zone 0 or Zone 20
Category 2	according to Annex 1 of ATEX 95 used in Zone 1 or 21
Category 3	according to Annex 1 of ATEX 95 used in Zone 2 or 22

Classification

	Category equipment	Inflammable substances	Level of protection	Fault protection	Comparison with present practice and IEC
Equipment group I (mines)	M1	Methane, dust	Very high level	2 types of protection or 2 independent faults	Group I
	M2	Methane, dust	High level	1 type of protection Normal operation	Group I
Equipment group II (surface)	1	Gas, vapours, mist, dust	Very high level	2 types of protection or 2 independent faults	Group II Zone 0 (gas) / Zone 20 (dust)
	2	Gas, vapours, mist, dust	High level	1 type of protection Habitual frequent malfunction	Group II Zone 1 (gas) / Zone 21 (dust)
	3	Gas, vapours, mist, dust	Normal	Required level of protection	Group II Zone 2 (gas) / Zone 22 (dust)

Temperature classes

Temperature class	Ignition temperature for the gas/vapour °C	Max. permitted temperature equipment °C
T1	> 450	450
T2	> 300 < 450	300
T3	> 200 < 300	200
T4	> 135 < 200	135
T5	> 100 < 135	100
T6	> 85 < 100	85

Grouping of electrical apparatus

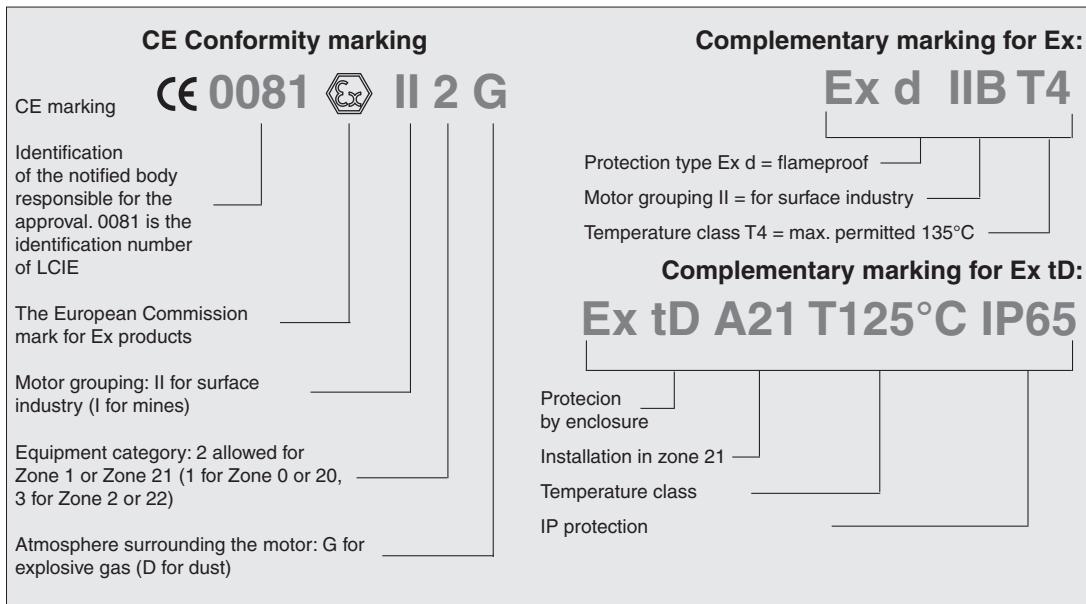

Group I	Apparatus for coal mines susceptible to firedamp
Group II	Apparatus for explosive atmospheres other than mines; surface industries
IIA, IIB, IIC	Group II is subdivided for Ex d and Ex i -equipment according to the severity of the environment. IIC is the highest rating; a motor from one of the higher categories can also be used in a lower category environment

Marking of equipment

Protection type marking:

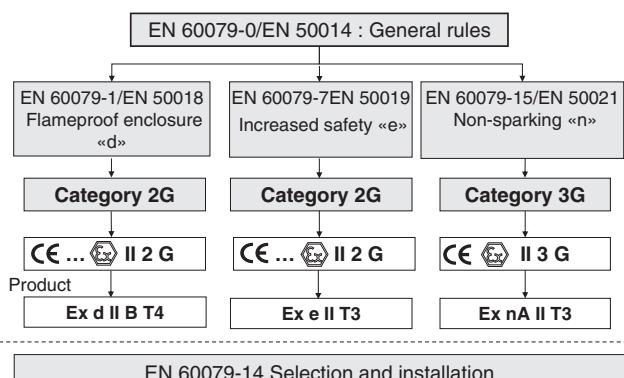

EEx according to the EN standards series 50000

Ex according to the EN standards series 60079 and 61241

Selection of products for hazardous areas

EN Standard for Group II: Gas environments **EN Standard for Group II: Dust environments**

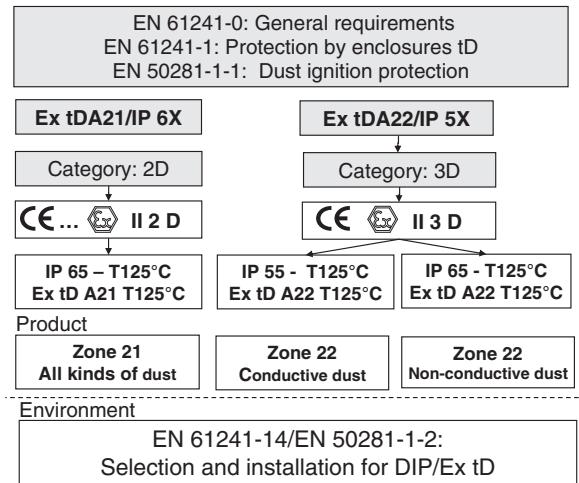

Environment

Zone 1

Zone 1

Zone 2

General about hazardous areas

Preamble

In hazardous areas, it is the utmost importance to ensure the safe use of electrical apparatus. To this end, many countries have regulations concerning both the design and use of such apparatus. These regulations are becoming increasingly harmonized within the framework of IEC recommendations and European Standards.

The hazard may be due to an explosive atmosphere composed of a mixture of gas, vapors or dusts with air. This chapter only deals with safety in explosive gas atmospheres for which European Standards exist. ABB has a full range of flameproof motors certified according to IECEx.

Flameproof enclosure Ex d and Ex de

The motor enclosure shall be designed in such a way that no internal explosion can be transmitted to the explosive atmosphere surrounding the motor. The enclosure must withstand, without damage, any pressure levels caused by an internal explosion. The shape, length and gap of part assembly joints, at shaft opening, cable entries, etc., shall be designed to allow for throttling and cooling of hot gases escaping outside. The standards emphasize the impact of an explosive atmosphere (for instance, explosion pressure) over constructional requirements of such apparatus.

The temperature of the motor's external enclosure should not exceed the self-ignition temperature of the explosive atmosphere of the installation area during normal operation. For this reason, rated output depends on this rated maximum temperature for the considered area.

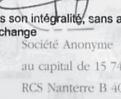

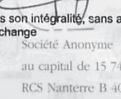

No motor device outside the flameproof enclosure (e.g., ventilation) shall be a potential source of sparks, arcs or dangerous overheating.

Variants combining two types of protection usually combine "d" and "e" protection. The most commonly used and recognized by the CENELEC European Standards is the Ex de variant. The motor is designed with an Ex d flameproof enclosure, while the terminal box features an Ex e increased safety protection. Such design combines the superior safety degree of the "d" type of protection with the less stringent electrical connection requirements of increased safety motors.

Motors featuring dual protection are seldom encountered - such as an increased safety motor with a flame-proof enclosure designated Ex e / Ex d in European Standards.

EC Declaration of Conformity		
The Manufacturer: ABB Shanghai Motors Co., Ltd N° 88 Tianning Road, Minhang (Economic & Technical Development Zone) 200245 – Shanghai, China		
hereby declares that		
The Products: 3-phase induction motors, series M2JA, M2GP : IEC shaft height 80 – 355: as listed on page 2 in this document, are in conformity with provisions of the following Council Directive:		
Directive 94/9/EC (ATEX of 23 March 1994).		
In respect of product categories the motors are in conformity with provisions of the following harmonized standards:		
For M2JA : EN 60079-0 (2006), EN 60079-1 (2004)		
A Notification LCIE 03 ATEX Q 8084 according to annex IV of Directive has been obtained and an EC-type examination certificate LCIE .. ATEX has been delivered for each type designation listed on page 2 of this document		
For M2GP : EN 60079-0 (2006), EN 60079-15 (2005)		
A Type examination certificate LCIE .. ATEX listed on page 2 of this document has been obtained.		
Changings of the newest revisions of above standards do not effect the construction of the listed motors, which thus comply with the Essential Health and Safety Requirements in Annex II of said directive.		
Note: The motor range listed have been certified according to old EN Standards range (EN 50014 / EN 50018 & EN 50021).		
According to decision of "ATEX European Standing Committee" and after consulting Notified Bodies, ABB is going to continue with the process already started to move the motor certifications from EN 500XX series of standards to EN 60079-0 / EN 60079-1 / EN 60079-15		
The Notified Body responsible for monitoring the ATEX Directive is LCIE Fontenay Aux Roses France. Identification number 0081.

	(A1) ANNEXE	(A1) SCHEDULE
(A2) ATTESTATION D'EXAMEN CE DE TYPE		
LCIE 04 ATEX 6106		
(A3) Description de l'équipement ou du système de protection :		
Moteur triphasé à courant alternatif Type : M2JA315...		
Moteur asynchrone avec carcasse antidiéflagrante et boîte à bornes antidiéflagrantes.		
Ce certificat concerne les types suivants : M2JA315S2A, M2JA315M2A, M2JA315L2A, M2JA315L2B, M2JA315S4A, M2JA315M4A, M2JA315L4A, M2JA315L4B, M2JA315S8A, M2JA315M8A, M2JA315L8A, M2JA315S8B, M2JA315M8B, M2JA315L8B, M2JA315L8B8.		
M2JA : Gamme des moteurs EEx d 315 : Hauteur d'axe M : Dimension montage carcasse 2 : Nombre de pôles A : Longueur de la carcasse		
Le démarrage direct en dessous de la gamme de température -40°C à -20°C est interdit.		
Des mesures appropriées doivent être prises pour préchauffer le moteur et garder sa température de l'enveloppe du bobinage dans des conditions normales de réchauffage et de chauffage du bobinage par une alimentation basse tension pendant un certain temps. Ce courant se produisant dans les enroulements n'excédera pas le courant défini sur la plaque signalétique.		
Les paramètres électriques sont les suivants :		
Tension nominale : 380-690V, 50Hz 440-480V, 60Hz Service : S1		
Variétés électriques et mécaniques définies dans les documents descriptifs du constructeur (voir A4).		
Le marquage est le suivant :		
ABB Motors Adresse Type : M2JA315... n° de fabrication Année de fabrication II 2 G IECEx T1 à T5 LCIE 04 ATEX 6106 Caractéristiques électriques (U _s ... V, I _s ... A, P _s ... kW, F ... Hz, r/min ..., Cos φ ..., ...) NE PAS OUVRIR SOUS TENSION (sur le couvercle)		
Le marquage CE est accompagné du numéro d'identification de l'organisme notifié responsable de la surveillance du système de qualité (0081 pour le LCIE).		
Le matériel devra également comporter le marquage normalement prévu par les normes de construction du matériel électrique concerné.		
The CE marking shall be accompanied by the identification number of the notified body responsible for surveillance of the approved quality system (0081 for LCIE).		
The equipment must also carry the usual marking required by the manufacturing standards applying to such equipments.

Mechanical design

Totally enclosed, fan cooled IP55

Heavy duty design, manufactured from extra corrosion resistant cast iron materials to be used in all kind of environment. The motor is mechanically very strong and robust and as standard designed for additional energy saving through frequency converter drives.

Flexible cable entry direction

Terminal boxes are mounted on the top of the motors, right or left. Terminal boxes of motor size 71-132 can rotate 4x90°C, and those of 160-355 can rotate 2x180°C. All are easy to refit.

Powerful refit available

The motors satisfy the requirements of a wide range of environments and applications, such as improving protection, insulation level, regreasing facilities, dust-proof, sealing rings, rainproof are available, a full range of options are listed in page 13.

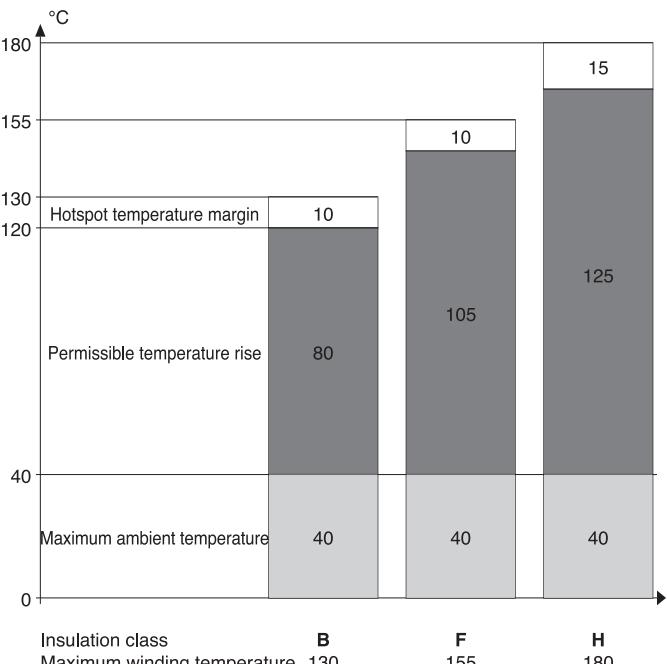

Insulation and insulation classes

According to IEC60085, insulating materials are divided into insulation classes. Each class has a designation corresponding to the temperature that is the upper limit of the range of application of the insulating material under normal operating condition.

The winding insulation of a motor is determined on the basis of the temperature rise in the motor and the ambient temperature. The insulation is normally dimensioned for the hottest point in the motor at its normal rated output and at ambient temperature of 40°C. Motors subjected to ambient temperatures above 40°C will generally have to be derated. In most cases, the standard rated outputs of motors from ABB Motors are based on the temperature rise for insulation classes B. Where the temperature rise is according to class F, this is specified in the data tables.

However, all the motors are designed with class F insulation, which permits a higher temperature rise than class B. The motors, therefore, have a generous over-load margin. If temperature rise to class F is allowed, the outputs given in the tables can generally be increased by about 12%

Temperature limits are according to standards. The extra thermal margin when using class F insulation with class B temperature rise makes the motors more reliable.

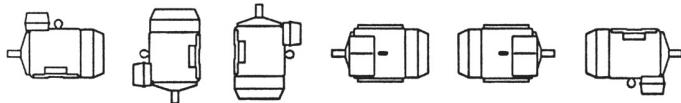

Safty margins per insulation class

Motors for other voltages

Motors wound for a given voltage at 50Hz can also be used for other voltages. Recalculation factors for current and torque given are beside; efficiency, power factor and speed remain approximately the same. Guaranteed values available on request.

ABB Motors reserve the right to change the design, technical specification and dimensions without prior notice.

Bearings and terminal boxes

The motors are normally fitted with single-row deep groove ball bearings as listed in the table below. Degree of protection of the standard terminal box is IP55. The motors are supplied with 2 cable entries as standard according to the table below.

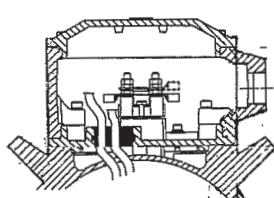

Terminal boxes are mounted on top of the motor. The terminal box of motor sizes 71 to 132 can be turned 4 x 90° and in motors sizes 160 to 355 rotated 2 x 180°.

Motors of terminal boxes:

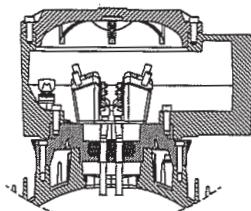

Terminal box for motors sizes 80 - 132

Terminal box for motors sizes 160 - 180

Terminal box for motors sizes 200 - 280

Terminal box for motors sizes 315 - 355

Permissible loadings on the shaft end

The tables below give the permissible radial force in Newton, assuming zero axial force. The values are based on normal conditions at 50 Hz and calculated bearing lives for motor sizes 71 to 355 of 20000 hours and 40000 hours.

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

At 60 Hz the values must be reduced by 10%. For two-speed motors, the values must be based on the higher speed.

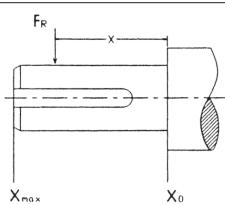

Permissible loads of simultaneous radial and axial forces will be supplied on request.

If the radial force is applied between points X₀ and X_{max}, the permissible force F_R can be calculated from the following formula: F_R=F_{x0}·X/E (F_{x0}-F_{xmax}) E=length of shaft extension in basic version

Permissible axial forces

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing life time of 20000 and 40000 hours.

At 60 Hz the values are to be reduced by 10%. For two-speed motors, the values are to be based on the higher speed. The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces F_{AD}, assumes D-bearing locked by means of locking ring.

Ordering information

Sample order

When placing an order, the motor type, size and product code must be specified. The product code of the motor is composed in various way, in accordance with the following examples.

A	B	C	D	E	F	G
M2JA	132S4A	3GJA	13	2	101	-
		1-4	5-6	7	8-10	11
						12
						13
						14
						15
						16

- A Motor type
- B Motor size
- C Product code
- D Mounting arrangement code
- E Voltage and frequency code
- F Generation code
- G Variant codes

Explanation of the product code (C,D,E,F) :

Positions 1 to 4

M2JA = Totally enclosed fan cooled squirrel cage motor with cast iron frame proof three-phase Induction Motors for Hazardous Environments

Positions 5 and 6

IEC frame

07 = 71	13 = 132	25 = 250
08 = 80	16 = 160	28 = 280
09 = 90	18 = 180	31 = 315
10 = 100	20 = 200	35 = 355
11 = 112	22 = 225	

Positions 7

Speed (pole pairs)

- 1 = 2 poles
- 2 = 4 poles
- 3 = 6 poles
- 4 = 8 poles

Positions 8 to 10

Running number series

Positions 11

-(dash)

Code letters for supplementing the product code

A	B	D	E	F	H
380 VY 50 Hz	380 VΔ 50 Hz	380-420 VΔ 50 Hz 660-690 VY 50 Hz 440-480 VΔ 60 Hz	500 VΔ 50 Hz 575 VΔ 60 Hz	500 VY 50 Hz 575 VY 60 Hz	415 VΔ 50 Hz

M2000 Flame proof motors – totally enclosed squirrel cage three phase motors

Lubrication :
Motor sizes 80-132 are fitted with bearing that are regreased for life. For size 160-355 are equipped with bearing that are regreasable via grease nipples.

Terminal box :

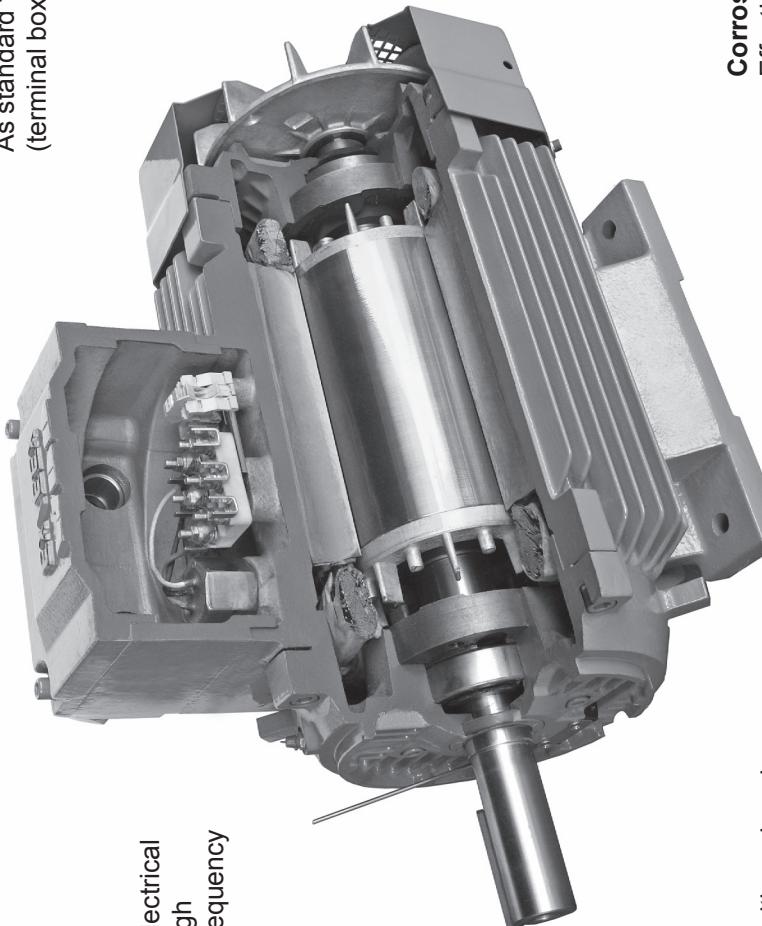

Terminal box :
The spacious terminal box of cast iron makes the motor quick and easy to connect. The terminal box of motor size 80-355 can be turned 4x90 degrees. As standard the terminal box is on top of the motor. (terminal box side mounted is not acceptable).

Insulation :
Phase insulation and generous electrical Dimensioning give the motor a high overload capacity. (Suitable for frequency converter drive)

Rotor winding :

Rotor winding :
The rotor winding is made of pressure diecast aluminium, a design that provides high starting capacity and low noise level.

Endshields, flanges :
The endshield of Ex d and different variants of flanges are of cast iron.

Low noise level :
The high efficiency of the motor means that a smaller, quieter fan can be used.

Bearings :

Bearings :
The motor size 80-90 are fitted with enclosed 2RS1 bearing as standard. The motor sizes 100-132 are fitted with enclosed DDU C3 bearing as standard. Sizes 160-355 have regreasable bearings as standard. Modern design secure high load capacity run.

Corrosion protection :
Effective corrosion protection means that the motor can be used in all environments.

Product Guide > Motors and Generators

Motors and Generators

ABB offers a comprehensive range of reliable and high efficiency motors and generators for all applications.

ABB has what it takes to help every industry and application reach new levels of efficiency and energy savings even under the most demanding conditions. Combining the best available materials with superior technology, the electric motors and generators are designed to operate reliably no matter how challenging the process or application, and to have low life cycle costs.

- ABB launches professional HV generators for mid-range gensets
- ABB introduces new platform for high voltage rib cooled motors
- ABB's new General performance motors deliver up to IEC efficiency
- ABB's new SynRM® motor technology will deliver IEC efficiency without rare earth magnets
- ABB opens fifth factory in Brazil in \$200-million expansion plan
- Watch the new video about ABB offering for wind power applications

Power and productivity for a better world™ ABB

Product Guide > Motors and Generators > IEC Low Voltage AC Motors

Low voltage motors

ABB offers a wide range of low voltage AC motors with improved energy efficiency and life cycle value.

Suitable for all industries, all applications - fulfilling all national mandatory efficiency regulations.

All global MEPS to support your export

Optimizer - easy-to-use tool for selecting MEPS compliant low voltage motors.

Our offering

→ Process Performance Motors [EN]	→ General Performance Motors [EN]
→ Brake Motors [EN]	→ HDP AC Servomotors [EN]
→ High Ambient Temperature Motors [EN]	→ Marine Motors [EN]
→ Permanent Magnet Motors [EN]	→ Roller Table Motors [EN]
→ Single Phase Motors [EN]	→ Smoke Extraction Motors [EN]
→ Water Cooled Motors [EN]	

Other applications

- Motors for explosive atmospheres
- All protection types, certified according to all major standards
- Synchronous reluctance motor-drive packages
- High-performance motor-drive packages,
