CHINCHUN ENTERPRISE 2002 CO.,LTD
www.chinchun2002.com

Chin Chun has more than 20 years of experience, we service diverse array of customers from Automotive, Appliances, Medical, Footwear, Luggage, Sport gears, Construction Industrials etc.. Our customer are global brand companies.

We are not stoping to seek any opportunity can provide latest technologies solution to customers. Especially provide NVH solutions for both Automotive and Construction, and world leading Foam, EVA CNC process is ready to service.

Chin Chun established since 1990,

locate in Bangkok area. Chin Chun has different know-how of technologies with materials and process to offer the best solution in “NVH” applications. We are toward to “Industry 4.0” factory, which can give customers best quality and fast delivery. Basically Chin Chun is customize subcontract factory to customers.

We provide our profession knowledge

to let your products have more Efficiency outcome.

ISO9001:2015 and IATF16949 qualified company. Year 2020 will toward MES and IoTs

Lamination

sandwich process The technology to bond different materials such as fabric and EVA, foam, film, tissue ... all into one component.

What is Lamination

Lamination sandwich process The technology to bond different materials such as fabric and EVA, foam, film, tissue ... all into one component.

Laminate Machine

PSA (Pressure Sensitive Adhesive)

coating process Chin Chun has both solvent & water base glue coating systems. We have two coating line with NDC coating weight measuring system to assure quality of glue. The thickness of materials our machine can laminate ranges from 0.2mm ~ 50mm. This process can also make tape and double-sided tape products.

What is P.S.A

PSA(Pressure Sensitive Adhesive)

Be generally called “Tape”

We focus on foam/thick material

Perforation and Embossing

Continuously punching machine can process materials width up to 1500mm. and unlimited length. We have diversification pattern molds to satisfy our customers. This process can be applied on Leather, Foam, Fabric, Non-woven and any other soft material with thickness not over 10mm. Automotive, footwear, underwear, luggage, sport gear which needs breathable function and better looking can use our unique process.

Insulation Heat Press Forming

Insulation Heat Press Forming With high volume and high pressure moulding technique utilized for moulding or bonding both large and small 3D thermoplastic felt or foam parts with complex feature requirements.

Analyze statistical process data

The image shows a screenshot of a web-based equipment management system. It features a table with columns for equipment ID, name, location, and status. The table is populated with data for various pieces of equipment. The interface is light-themed with a blue header and footer.

Equipment ID	Equipment Name	Location	Status
000001	000001	000001	000001
000002	000002	000002	000002
000003	000003	000003	000003
000004	000004	000004	000004
000005	000005	000005	000005
000006	000006	000006	000006
000007	000007	000007	000007
000008	000008	000008	000008
