

CALVOSEALING, K.F.T.

Global Business Group

STATIC SEALING

RUBBER & Spiral Wound Gasket SHEET

Rubber Sheets

CALVOSEALING offers a wide range of rubbers for use in general industry. We have 10 types of elastomers where each one offering its quality and guarantee a reliable and durable seal.

Cork - Rubber Sheet

ICP9050

Cork based material mixed with synthetic NBR rubber.

CAMPROFILE GASKET

Camprofile Gasket consist of a serrated metal core with a soft facing material. The metal core is a machined on each contact face with concentric serrations which provide high pressure areas, ensuring that the soft coating flows into any imperfections in the flange even at relatively low bolt loads.

The result is a gasket which combines the benefits of soft cut materials with the advantages of seal integrity associated with metallic gaskets.

G-ST GASKET

The flat steel-ring, corrosion protected by being vulcanized in, absorbs the required test pressure with ease.

Irregularities and grooves, even slight misalignments are compensated.

RING TYPE JOINT GASKET

Ring Type Joints are metal ring to be used with elevated pressure and temperature applications.

The sealing contact area results very reliability.

Sealing gasket contact surface, as well as flange surface, have to be machined and finished.

As well, the gasket presents sensitivity to the minimal tightening during installation.
