5-1 How to connect the receiver// RU-901Du

1. Connect the audio output of receiver to mixer or amplifier

    1.1RU-901Du：

    (1) The XLR output jack or 6.3mm unbalance output jack can be selected individually to connect the AF output to a mixer or amplifier for volume control.

    (2) Switch the "Mixed" on the back to ON. This allows to mix the RX1 and RX2 signals to RX1's 6.3mm non-balance output jack and then to a mixer or amplifier for volume control.

2. Connect the power

    2.1. Connect the AC/DC adapter:

    Check that the DC current and voltage ratings of the adapter match the label on the unit. Connect the DC terminal to the "DC input" port on the unit, and the AC end to an AC socket.

    2.2. Set the parameters:

    Turn the power on and set the parameters of receiver according to the setting instructions.

    ⚠ Caution! Secure the power cable on the fastening hook of anti-pulling clip in order to prevent the power cable from falling.

Pairing **REMOSET $\widetilde{\textbf{u}}$**

Once the parameters are set, push the " **REMOSET $\widetilde{\textbf{u}}$** " button and the digital pairing data will be sent to the transmitter via ultrasonic transmitter for parameter synchronization. The indicator will flash rapidly while the data are being transmitted. When the synchronization is completed, the receiver will receive the corresponding data and the indicator will stop flashing. If the signal is not received for a certain period of time, the indicator will flash slowly to inform pairing failure (the slowly flashing indicator can be reset by pushing any button).

Note: The best pairing distance is 10~50cm, ±30º.
