

A photograph of a snake gourd (Luffa cylindrica) field. The plants are climbing on a trellis system, with large green leaves and long, bumpy, green snake gourds hanging down. The background shows a path and more rows of plants under a bright sky.

SNAKE GOURD

F1-Hybrid Snake Gourd

CODE: SG-060

Characteristics

High productive fruit, uniformity dark green skin with white color stripe until the bottom end. Able to grow all year round.

Fruit length: 37-40 cm.

Fruit weight: 195-200 gm.

Diameter: 3.5-3.8 cm.

Harvest time: 45-50 days after transplanting.

CODE: SG-059

Characteristics

High productive fruit, uniformity dark green skin with white color stripe until the bottom end. Able to grow all year round.

Fruit length: 37-40 cm.

Fruit weight: 190-195 gm.

Diameter: 3.7-4 cm.

Harvest time: 45-50 days after transplanting.

CODE: SG-061

Characteristics

High productive fruit, uniformity dark green skin with white color stripe until the bottom end. Able to grow all year round.

Fruit length: 39-40 cm.

Fruit weight: 182-185 gm.

Diameter: 3.8-4 cm.

Harvest time: 45-50 days after transplanting.

CODE: SG-005

Characteristics

Prolific growth and well-branched.

Elongated green fruit with white stripes until the bottom end.

Fruit size: 3.10x56 cm.

Fruit weight: 210 gm.

Harvest time: 40-45 days after sowing.

CODE: SG-009

Characteristics

High productive fruit and well-branched. Uniformity light green color with white stripe until the bottom end.

Fruit size: .8x40 cm.

Weight: 220 gm.

Harvest time: 30-45 days after sowing.
