

Pro-V™ Multivariable Flowmeter

Model M23 Insertion Vortex

VorTek Instruments' Pro-V™ multivariable flowmeters utilize three primary sensing elements—a vortex shedding velocity sensor, an RTD temperature sensor, and a solid-state pressure transducer—to measure the mass flow rate of gases, liquids and steam. Because the Pro-V™ is able to measure all process variables within a single device it provides exceptional accuracy, simplifies system design and reduces installation costs.

To enhance reliability, the Pro-V™ Model M23 insertion flowmeters feature a no-moving parts design and rugged, welded construction. They are easily installed with flanged or Male NPT process connections in any pipe size of two-inches and greater. Optional retractor or “hot-tap” hardware simplifies maintenance operations.

The Pro-V™ provides excellent rangeability and a low permanent pressure drop. To simplify installation and commissioning, all measured variables and programming menus are available on the instrument's easy to use display and control pad.

The product line is available with a wide range of options and meter configurations to meet your specific application requirements.

Pro-V™ Advantage:

- Volumetric or mass flow monitoring of most liquids, gases, and steam
- Multivariable meter delivers mass flow, temperature, pressure, and density readings from a single installed device and reduces initial cost, installation cost and cost-of ownership over the lifetime of the instrument
- Compensated mass flow reading of liquids, gases, and steam
- Energy Monitoring—ability to compute and output energy use
- Easy to install and commission—Hot tappable, process shut down not required for installation
- Reliable—no moving parts, no fluid to sensor contact
- High accuracy with rangeability up to 100:1
- Temperature up to 750°F
- Pressure up to 1500 psig
- Insertion style mounting permits installation in any pipe 2" and greater
- Field configurable ranges, outputs and displays
- Remote electronics option available for use in harsh environments or locations with limited access
- 4-20mA loop—powered Mass Meter design saves on energy costs
- HART protocol communications - Standard
- Modbus communications available
- FM, FMC, ATEX, IECEx Approved

Pro-V™ Principle of Operation

Vortex flowmeters measure flows of liquid, gas and steam by detecting the frequency at which vortices are alternately shed from a bluff body. According to proven laws of physics, the frequency at which the vortices are alternately shed is directly proportional to the flow velocity.

Insertion vortex flowmeters measure flow by detecting the local velocity at a strategically located position within the pipe. The Pro-V™M23 detects the frequency at which vortices are alternately shed from the bluff body located within the sensor head. The Pro-V™M23 uses the local velocity, along with other parameters, such as fluid type, pipe size and Reynolds number to calculate the average pipe velocity, and consequently, the volumetric flow rate.

Pro-V™ Model M23-VTP

The Model M23-VTP offers you flow computer functionality in a compact field device. This multivariable instrument incorporates temperature and pressure sensors to provide an instantaneous reading of the compensated mass flow rate of gases, liquids and steam. In addition to outputs for totalized mass and alarm settings, the field-configurable electronics deliver up to three analog 4-20 mA outputs of five process measurements, including volumetric flow rate, mass flow rate, pressure, temperature and density.

Pro-V™ Model M23-VT

The Model M23-VT integrates a precision 1000 Ohm platinum RTD temperature sensor that can be used to calculate and output a compensated mass reading. This device is typically used to measure flow rates of saturated steam.

Pro-V™ Model M23-V

The Model M23-V delivers a direct reading of volumetric flow rate—generally the most cost-effective solution for liquid flow monitoring—in applications ranging from general water flows to hydrocarbon fuel flow measurement.

Pro-V™ Model M23-EM

The Model M23 Energy Monitoring option permits real-time calculation of energy consumption for a facility or process. The meter can be programmed to measure steam, hot water or chilled water. The Model M23-VTP flowmeter monitors one side of the process, either sent or returned, and uses the input from a second separate temperature sensor on the opposite leg of the process to calculate the change in energy. Selectable energy units include Btu, joules, calories, Watt-hours, Megawatt-hours and Horsepower-hours. The local or remote electronics indicate two temperatures, delta T, mass total and energy total.

Performance Specifications

Accuracy

Mass flow rate accuracy for gas and steam based on 50-100% of pressure range.

Pro-V™ Model M23 Multivariable Flowmeter		
Process Variables	Liquids	Gas & Steam
Volumetric Flow Rate	± 1.2% of Rate	± 1.5% of Rate
Mass Flow Rate	± 1.5% of Rate	± 2.0% of Rate
Temperature	± 2°F (± 1°C)	± 2°F (± 1°C)
Pressure	± .3% of Full Scale	± .3% of Full Scale
Density	± .3% of Reading	± .5% of Reading

Repeatability

Mass Flow Rate ± .2% of rate
 Volumetric Flow Rate ± .1% of rate
 Temperature ± .2°F (± .1°C)
 Pressure ± .05% of full scale
 Density ± .1% of reading

Stability Over 12 Months

Mass Flow Rate ± .2% of rate
 Volumetric Flow Rate ± negligible
 Temperature ± .9°F (± .5°C)
 Pressure ± .1% of full scale
 Density ± .1% of reading

Response Time

Adjustable from 1 to 100 seconds

Operating Specifications

Any gas, liquid or steam compatible with 316L stainless steel. Not recommended for multi-phase fluids.

Process and Ambient Temperature

Process Standard Temperature (code ST): -330 to 500°F (-200 to 260°C)
 Process High Temperature (code HT): to 750°F (400°C)
 Ambient Operating: -40 to 185°F (-40 to 85°C)
 Ambient Storage: -40 to 185°F (-40 to 85°C)

Pressure Transducer Ratings

Power Requirements

Model M23, DCL option: 12-36 VDC loop powered (single output)
 Model M23, DCH option: 12-36 VDC, 300 mA max (multiple outputs)
 Model M23, AC option: 85-240 VAC, 50/60Hz, 5 Watts (multiple outputs)

Display

Alphanumeric 2 line x 16 character LCD digital display
 Six pushbuttons for full field configuration
 Pushbuttons can be operated with magnetic wand without removal of the enclosure covers
 Display can be mounted in 90° intervals for better viewing

Output Signals

Analog: 4-20 mA
 Alarm: Solid state relay, 40 VDC
 Totalizer Pulse: 50 millisecond pulse, 40 VDC
 Volumetric or Loop Powered Mass: One analog, one totalizer pulse, HART
 Multivariable option: Up to three analog signals, three alarms, one totalizer pulse, HART
 Multivariable option: Modbus process monitoring

Physical Specifications

Wetted Materials

316L stainless steel, plus:

- DuPont Teflon® based thread sealant on models with pressure transducer.
- DuPont Teflon® packing on standard temperature models with packing gland.
- Graphite based packing on high temperature models with packing gland.

Approvals

Sizing Considerations

Piping Conditions

Condition	Pipe Diameters, D	
	Upstream	Downstream
One 90° elbow before meter	10D	5D
Two 90° elbows before meter	15D	5D
Two 90° elbows before meter, out of plane	25D	5D
Reduction before meter	10D	5D
Expansion before meter	20D	5D
Partially open valve	25D	5D

Velocity Range

Maximum velocity, liquid: 30 feet/sec (9 meters/second)
 Minimum velocity, liquid: 1 foot/sec (.3 meters/second)
 Maximum velocity, gas or steam: 300 feet/sec (90 meters/second)
 Minimum velocity, gas or steam feet/sec (meters/second):

$$\frac{5}{\sqrt{\text{density (Lb/ft}^3)}} \quad \frac{6.1}{\sqrt{\text{density (kg/m}^3)}}$$

Consult the VorTek Instruments Sizing Program @vortekinst.com for easy calculation of flow range.
