About Schneider Electric

Schneider Electric is leading the Digital Transformation of Energy Management and Automation in Homes, Buildings, Data Centers, Infrastructure and Industries. With global presence in over 100 countries, Schneider is the undisputable leader in Power Management – Medium Voltage, Low Voltage and Secure Power, and in Automation Systems. We provide integrated efficiency solutions, combining energy, automation and software.

In our global Ecosystem, we collaborate with the largest Partner, Integrator and Developer Community on our Open Platform to deliver real-time control and operational efficiency.

We believe that great people and partners make Schneider a great company and that our commitment to Innovation, Diversity and Sustainability ensures that Life Is On everywhere, for everyone and at every moment.

On-line Valve and Actuator Selection Tool

The Valve and Actuator Selection Tool is a dynamic sizing tool designed to provide a very quick and simple way of choosing the most appropriate product for your application. A wealth of information is at your fingertips with full technical details and quick access to key product documentation.

Sizing and selection for all HVAC valve and actuators

- Ball Valves
- Butterfly Valves
- Globe Valves
- Pressure Independent Balancing Control Valves
- Zone Valves
- Shoe Valves
- Damper Actuators

Features

- Intuitive selection based on calculators and/or drop down menus
- Customer and partner profiles possible in any schedule creation
- Valve and Actuator selection feature to create schedule of hydronic systems
- Ability to create own or add to hydronics a schedule of damper actuators
- Ability to view, edit, change, communicate and adjust schedules. Download completed schedules to Excel, pdf, and BOM
- Ability to save schedules in progress to be worked on later or for use as a template for future projects

Browser compatibility

- Chrome (preferred). Use of other browsers may exhibit unintended behaviors

Ball valves and actuators

VB210R, VB200R and VB310R, VB300R

These VB range of ball valves utilise a low friction packing design around the ball which enables a low torque and compact motor to be used in the actuator.

The VB210R and VB310R ball valves variants incorporate a flow characterizing insert to providing an equal percentage flow characteristic with high rangeability.

These valves are suitable for control of hot or chilled water applications.

Specifications	
Service^a	Hot and chilled water, up to 60% glycol
System static pressure limit	PN40
Media temperature limits	-7 to 120 °C
Close-off pressure^b	895 kPa 2-way; 480 kPa, 3-way
ΔPm	205 kPa normal operation, 135 kPa psi quiet operation
Seat leakage^c	ANSI class IV (0.01%)
End connections	Rp threaded
Material	
Body material	Forged UNC 37700 brass
Stem Material	Stainless steel anti-blow out stem with dual Viton™ o-rings
Ball material	304 Stainless steel
Seat material	PTFE
Characterized insert	Glass-filled PEEK

a. Not rated for steam service.
b. Close-off is defined as the maximum allowable pressure drop to which a valve may be subjected while fully closed.
c. Seat Leakage in normal direction of flow only

MB3, MB6

The MB3 and MB6 are compact actuators for the VB210R, VB310R, VB200R and VB300R.

A 'pop top' connection between the valve and actuator provides a fast and easy installation.

Actuators are available in both spring return and non-spring return versions for floating, proportional and 2-position control.

Supply voltage	24 Vac +25%, -15% @ 50/60 Hz.

VB601R Valves and MB10 Series Actuators

The VB601R is a 6-port motorized ball valve that performs a diverting function between two water circuits in 4-pipe changeover system. The VB601R Valve will switch between heating and cooling with the addition of the **SpaceLogic** MB10 Two-Position Rotary Actuator.

Flow regulation is provided from an additional **SpaceLogic** PIBCV Valve and Actuator. This provides the additional benefit of having a balanced energy efficient solution with superb proportional control.

The control signal to the 6-port diverting valve actuator determines the direction of flow through the valve. Changing the control signal will rotate the actuator and switch the supply ports between heating and cooling or vice versa. During the 6-port valve motorization, the valve rotates through a mid point with all ports isolated and with no possibility to cross connect and mix the heating and cooling circuits.

Models also exist for use with PIBCV SP90 Actuators: MB10-24T-PLUG, MB10-24T-ENGY and MB10-24T-FLEX.

Other features include:

- No cross-flow between supply circuits
- Single on/off control signal to change over supply circuits
- Visual indication of actual valve position
- Silent and reliable operation
- Maintenance free
- Teflon seal and polished chrome valve ball to prevent valve sticking
- Manual override

Butterfly Valves and Actuators

VF208W 25-200NS and 100-200NZ

The VF208W is a new generation butterfly valve for the isolation and control of water for HVAC systems such as boiler isolation or heat pump change over from cooling to heating. The butterfly valves have elongated wafer type eyelets for fitment between flanges

- Energy saving: EPDM soft seats provide tight shut off and zero leakage (complete insulation possible according to German energy saving order, EnEV)
- Approved for use with drinking water DN25-80 (DVGW)
- Maintenance free, double sealing of stem, central disc bearing
- Good flow control characteristics
- Integrated dew point barrier
- No linkage kits required

VF299W-250 to 500CN

The VF299W is a general purpose, large butterfly valve with an undercut disc for low actuator torque.

- Wafer lugs for PN6, PN10 and PN16 pattern flanges
- The EPDM soft-seat provides a tight close off with low torque actuator
- Nylon 11 disc for compatibility with many media types including sea water
- Manual adjustment through hand lever, gearbox

VF209W-50 to 500CN

The VF209W is a premium high pressure butterfly valve for heavy duty HVAC and industrial applications.

The VF209W can be used as a manual isolation valves or be controlled from a choice of Two-position on/off, 3-point floating and modulating actuators.

Wafer type connection for fitting between flanges. PN6 (DN50 to DN400), PN10, and PN16 (DN50 to DN500)

- EPDM soft-seat provides a tight closing of the butterfly valve with the maximum close-off pressure
- Suitable for cooling with salt, brackish and drinking water media from the Nylon 11 disc coating
- Manual adjustment through a ten-position hand lever, gearbox or the handwheel on the actuators

MF20 (SR), MF20-R, MF40 (ER)

The MF20 and MF40 are robust reliable actuators for the control of the VF208W Butterfly Valves. These actuators mount to the VF208W Series Valves without linkage kits and connect using terminal blocks to simplify and reduce installation time. The MF20-R actuator allows connection on to installed TRV-S Butterfly Valves, no linkage kit is required with this actuator too.

- Models for floating/modulating/on-off control
- 2 to 10V Positional feedback on modulating models
- Latching manual override
- Direct handle/lever/position indicator
- Auxiliary switch available as an accessory
- Standard and Spring return/electronic return variants

Damper Actuators

MD5A, MD10A, MD20A, MD40A

The MD-A are 2 to 10V modulating damper actuators designed for operating air control dampers in ventilation and air conditioning systems for building services installations.

As an accessory, these modulating actuators have a fully adjustable auxiliary switch unit.

Damper actuators can be used with mounting kits to drive selected butterfly and shoe valves.

Specifications	
Power supply	24 Vac $\pm 20\%$, 50/60 Hz, 24 Vdc $\pm 20\%$
Connection cable	1 m, 4 \times 0.75 mm ² (AWG 18)
Effective control signal range	2 to 10Vdc
Input signal range X	0 to 10Vdc
Input resistance	100 k Ohm
Operating range	2 to 10Vdc (for set angle of rotation)
Synchronisation tolerance	$\pm 5\%$
Position feedback Y	2 to 10Vdc (max. 1 mA)
Direction of rotation	Reversible with switch 0/1 at switch position 0 resp 1
Angle of rotation	Max. 95° (adjustable by mechanical stops)
Running time	150 s
Position indication	Mechanical
Manual override	Gearing latch disengaged with push-button, self-resetting, manual locking
Enclosure rating	IP 54
Humidity	95% RH, non-condensing
Environment	
Operating temperature	-30 to +50 °C
Storage temperature	-40 to +80 °C
Maintenance	Maintenance free

Damper Actuators

MD5B, MD10B, MD20B, MD40B

The MD-B are on/off damper actuators designed for operating air control dampers in ventilation and air conditioning systems for building services installations. The actuators are available in 24 Vac/Vdc or 230 Vac versions and versions with an integrated end point switch (-S types). The Auxiliary switch is also available as an accessory.

Damper actuators can be used with mounting kits to drive selected butterfly and shoe valves.

Globe Valves and Actuators

V241

The V241 is a high quality general purpose valve. Polished stainless seats provide high differential pressure capability and low leakage.

Suitable for a wide range of applications such as heating, cooling, air handling, domestic hot water, and district heating applications. The valve can handle hot and cold water with phosphate, hydrazine and antifreeze additives.

If the valve is used for media at temperatures below 0 °C (32°F), it should be equipped with a heater to prevent ice formation on the valve stem.

VG210R 15-50B

The VG210R 15-50B is a range of compact precision bronze globe valves, suitable for a wide range of fluid control applications, including heating, cooling, air handling and domestic hot water systems. The VG210R 15-50B series works reliably under a wide variety of conditions, including fluids with high glycol concentrations and very high temperature bands. The valve utilizes precision plugs for improved rangeability and fine fluid control on small opening degrees. Soft seating also guards against seepage of precious energy when not required.

VG221F 65-150C

The VG221F-C is a large flanged balanced valve suitable for large hydronic flows in heating and air conditioning circuits. The balanced plug enables a low actuating force to control the valve.

Suitable for a wide range of applications using hot water or de-aerated cooling water
With cooling media at temperatures below 0 °C, a heater must be fitted to protect against stem seizure due to freezing.

V341

The V341 is a high quality general purpose valve. Polished stainless seats provide high differential pressure capability and low leakage.

The valve is suitable for a wide range of applications such as heating, cooling, air handling and domestic hot water systems. The valve can handle hot and cold water with phosphate, hydrazine and antifreeze additives.

If the valve is used for media at temperatures below 0 °C, it should be equipped with a heater to prevent ice formation on the valve stem.

VG310R 15-50B

The VG310R 15-50B is a range of compact precision bronze globe valves, suitable for a wide range of fluid control applications, including heating, cooling, air handling and domestic hot water systems. The VG310R 15-50B series works reliably under a wide variety of conditions, including fluids with high glycol concentrations and very high temperature bands.

The valve utilizes precision plugs for improved rangeability and fine fluid control on small opening degrees. Soft seating provides an ultra tight close off performance against energy seepage.

Specifications	
Design	3-way plug valve, stem up closed
Pressure class	PN 16
Flow characteristic	Equal percentage modified
Stroke	11 mm
Rangeability (Kvs/Kvmin.)	>100
ΔPm	400 kPa, water
Max. temperature of medium	138 °C

Globe Valve Actuators

SpaceLogic MG350

The **SpaceLogic** MG350 is a compact electro-mechanical actuator for controlling 2-way and 3-way globe valves V241/V341, V211, V211T, V311, and V311T. The MG350 actuators are primarily designed for applications where the demands on speed and thrust are relatively small.

- Stable force control with stall protection
- Dual 3-Point floating and 2-position control.
- Sink or source floating control
- High Resolution PCBA and motor transmission for fine valve plug position and excellent flow control.
- LED status indication
- Tri-color LED for operation, calibration, and alarm notification
- Removable terminal block and cable gland for ease of installation.

SpaceLogic MG350C

The **SpaceLogic** MG350C is a compact electro-mechanical actuator for controlling the VG210 and VG310 2-way and 3-way linear globe valves. The MG350C actuators are primarily designed for applications where the demands on speed and thrust are relatively small.

- Stable force control with stall protection
- Hysteresis Control - intelligent response to fluctuating control signals, extending actuator life and better plant regulation
- High Resolution PCBA and motor transmission for fine valve plug position and excellent flow control.
- Low power holding
- Auto adaptation to valve end stroke limits upon first power up
- LED status indication
- Tri-color LED for operation, calibration, and alarm notification
- Removable terminal block and cable gland for ease installation

SpaceLogic M310, M400, M800, M1500 and M3000

The **SpaceLogic** M310, M400, M800, M1500 and M3000 are a family of actuators for the control of 2-way and 3-way globe valves.

A very fine resolution PCBA board provides good rangeability of the valve. The Software in the actuator calibrates the running time and S2 switch points to the valve stroke limits. It may also be configured for different Flow characteristics, inverse signal or sequence control.

The U-bolt mounting makes for a very easy and quick installation. The manual override allows the actuator to be overridden and valve position adjusted without disconnecting the power supply.

SpaceLogic MG600C, MG600C-SR

The MG600C and MG600C-SRU/SRD are short yoke actuators designed for use with the VG210R and VG310R valves. Spring return and Non-spring return versions with Flexible control configuration (floating or modulating, sequencing), position feedback and flow curve adaptation (EQ to Lin).

- Brushless DC motors and a high resolution control board allow a very fine fluid control.
- Working range and end point switches adjust automatically to valve stroke.
- Firmware calibrates consistent running time regardless of valve stroke.
- On power loss the spring return mechanism drives the motor, generating power to control braking speed, avoiding mechanical stress and system water hammer.
- Available in spring return stem up or spring return stem down and either IP54 or rooftop IP65 enclosures.
- Configurable for either a 3-point Increase/decrease signal or various modulating control signals including sequencing.
- U-Bolt connection allows direct mounting without any mounting kit or special tools.

MV15B

The MV15B is a powerful 3-point floating actuator for the control of 2-way and 3-way globe valves, available in both 24 Vac and 230 Vac versions. The actuator self adjusts to the stroke of whatever valve it is connected to. The U-bolt mounting makes for a very easy and quick installation. A manual override is standard on all models.

SpaceLogic M700 - Spring Return

The **SpaceLogic M700** is a spring return actuator for control of longer stroked and larger size globe valves. It utilizes the same flexible platform functionality as in the M310, M400, M800, M1500, M3000 Non-spring return actuators so it has the same capability for self-adapting to the valve stroke, and the same flexibility in set-up configuration. The U-bolt mounting makes for quick installation. Manual override is standard on all models.

Pressure Independent Balancing Control Valves and Actuators

VP228E, VP229E, VP220E

The **SpaceLogic** VP228E, VP229E, and VP220E are threaded pressure independent balance and control valves for use in heating and cooling circuits.

- Stable hydronic flow, independent of any change in system pressure.
- Without an actuator, the valve can be operated an automatic balancing valve for flow limiting applications.
- Simple to calculate and adjust to the needed flow setting

Note: A Higher flow (Q_{max}) is achievable on some sizes by increasing the pressure drop through the valve; please refer to specific technical data sheets.

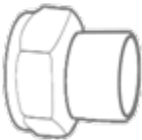

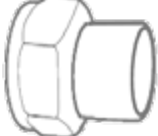

ΔP : Differential Pressure Operating range. The differential pressure across the valve must be within the range specified for predictable, stable and fully adjustable flow to the limits detailed within.

Pipe connections

The VP228E, VP229E and VP220E have externally threaded end connections for the attachment of various types of pipe connections.

Pipe connections are supplied in pairs and are typically a two piece + gasket separable design allowing the valve to be removed with minimal disruption to the pipework. On some sizes a one piece + gasket inseparable design is necessary and additional couplings may be required for practical disassembly.

Two end connection sets per pack. Order one pack per valve.

MP130 Actuators

The MP130 is a family of compact and low power motoric actuators that drive the DN10 to 32 **SpaceLogic** PIBCV in various hydronic HVAC applications.

The modulating actuators have fine positional control and are self calibrating to the adjustable stroke/ flow setting in the VP228E and VP229E valves which provide optimal hydronic control.

- Low noise operation
- Overload protection
- Manual override in all models

MP120/MP140

MP120NC and MP140NO are small thermoelectric valve actuators for two-point or pulse-width-modulated (PWM) regulation of the DN10–32 **SpaceLogic** PIBCV valves. The MP120 has a manual override operation for easy flushing.

- Water-protected housing design in all mounting positions
- Pluggable cable for easy installation and servicing (MP120)
- Low power consumption – allowing many actuators to be driven from the same controller
- Visual indicator showing valve position and type of action (NO or NC)
- Silent Operation

MP300-SR

MP300-SR actuators with Floating and Proportional control are low voltage motoric actuators for the Smart X PIBCV DN10-32 Valves. These actuators have a spring return safety function that provides for an open or close valve in the event of power loss.

The Spring return safety function should not be used for two-position control. The MP300-SR actuator is not suitable for use in very quiet applications like hotel guest rooms.

SP90

Schneider Electric’s **SpaceLogic** SP90 is a high accuracy multi-function field bus actuator, specifically designed for use in combination with DN10 to 32 **SpaceLogic** PIBCV valves.

The high positional accuracy, together with the linear flow characteristic of the **SpaceLogic** PIBCV valve, allow the **SpaceLogic** SP90 to be used as a flow indicator. When the SP90 is connected to temperature sensors across a coil, heat consumption will also be calculated.

- All Remote design flow settings made from the BMS
- Pluggable cables with Daisy chain connectivity allowing for super quick installation and reduction of mis-wiring
- LED status indication
- Auto MAC addressing
- Alarm reporting
- Spare 0 to 10V and 2xPt1000 input

Setup of the actuator and valve parameters are all made via fieldbus. The remote flow adjustment saves considerable time during mechanical installation/flow balancing with no need to adjust the flow setting dial on the valve. Dedicated 6-way change over valves can also be used in combination with the SP90.

MP500C

MP500C linear electro-mechanical actuator for the control of the VP220 **SpaceLogic** PIBCV, DN40 to 100.

MP500C is controls either by an Increase/decrease floating signal or by a range of modulating control signals between the span of 0 to 10V.

- High resolution control for precise fluid control.
- Working range and end point switches calibrate to any stroke and flow setting of the valve.
- Proportional running time is 15s regardless of valve stroke.
- Multi-signal control for either 3-point Increase/decrease signal or various modulating control signals including sequencing.
- Stroke Indicators on the yoke provide clear visual indication to the valves opening position.

Specifications	
Supply voltage	24 Vac +/- 20%, 50 to 60Hz 24 Vdc +/- 20%
Power consumption	average 15 VA

MP2000-SR

The MP2000-SR is a spring return actuator used with the DN125 to 150 **SpaceLogic** PIBCV.

The actuator has universal control inputs and is self-calibrating.

- Manual operation mechanical and/or electrical
- Position indication, LED signalization
- Selectable speed 4 or 6 s/mm
- Integrated external switch
- Linear to EQ% Curve Adaptation
- Anti-oscillation function
- 3-point floating or modulating control selection
- Thermal and overload protection
- Precise regulation and fast response on 3-point signal (0.01 s)

Specifications

MP2000-SR-230

The MP2000-SR-230 is a line voltage spring return actuator for the DN125 to 150 SmartX PIBCV.

The actuator has universal control inputs and is self-calibrating.

- Manual operation mechanical and/or electrical
- Position indication, LED signalization
- Integrated external switch
- 3-point or modulating control selection

MP4000

The MP4000 is a powerful universal control actuator for the DN200 and DN250 **SpaceLogic** PIBCV.

- Universal input control and self-calibrating.
- Manual operation mechanical and/or electrical
- Position indication, LED signalization
- Integrated external switch
- Characteristic optimization
- 3-point floating or modulating control selection
- Thermic and overload protection
- Precise regulation and fast response on 3-point signal (0.01 s)

Radiator Valve Actuators

MR95

The MR95 is a small thermoelectric linear radiator valve actuator used in room applications for time-controlled two-point (On/Off) and pulse-width-modulated (PWM) regulation radiators or underfloor heating manifolds.

The MR95 is a discreet design silent operating actuator suitable for living space installations.

Specifications	
Max. stroke	4mm

MZ09L

The MZ09L LON® actuator is designed for decentralised building structures and gives customers an effective new capability in energy management and product flexibility. The actuator works with standard SNVTs to provide interoperability with controllers based on LonWorks® technology.

The MZ09L small linear actuator is specifically designed to provide LonMark® capabilities together with radiator valves and is used in fan coil units, induction units, small reheaters and recoolers, and for zone control applications. The MZ09L actuator is suitable for LonWorks technology. Using standard Echelon configuration tools, the actuator can be configured with job specific settings.

Specifications	
Power supply	24 Vac, ± 20%, 50/60 Hz

MZ09B

The MZ09B actuator is designed to provide 3-point control together with radiator valves. The MZ09B actuator is used for radiator valves in fan coil units, induction units, small reheaters and recoolers, and for zone control applications. The absence of end switches and feedback potentiometer provides longtime reliability.

RM, XRM

These actuators operate the MB Shoe Valves. The XRM Actuator is designed to be operated by a three point floating controller providing an output of 24 Vac. The RM Actuator is a main voltage reversing actuator, designed for two-position control when used with a changeover type thermostat or modulating control when used with an appropriate controller. On power failure the actuator can be operated manually.

Specifications

Specialist products

VZ22, VZ32, VZ42

These long stroke (6.5 mm) zone valves have a very high working pressure capability and can be driven from a wide range of actuators including types with LON communication. The VZ22, VZ32 and VZ42 valves are a robust range of zone valves in 2-way, 3-way and 3-way with 4 ports.

With this range of products, the same valve body can be driven by both a thermal and motoric actuator.

MZ18A, MZ18B, MZ18L

For VZ22, VZ32, VZ42 Zone Valves, the MZ18 is a compact electro-mechanical zone valve actuator designed for use with the VZ*2 valves.

These actuators feature reliable long term operation ensured from a simple design without the need for end switches. Visual position indication on all models.

MZ95

The MZ95 is a thermal zone valve actuator designed for use with the VZ*2 Valves.

Normally used for on/off two-position control but PWM is possible with the appropriate controller.

A discreet design with high IP rating in any orientation, clear position indication and alternative cable lengths.

Specifications	
Supply voltage	24 Vac

V222

The V222 is a large flanged balanced globe valve, suitable for control of large flows in heating and air conditioning systems. The balanced plug enables a low actuating force to control the valve. A stainless steel seat allows a large pressure drop across the valve.

Suitable for a wide range of applications using hot water or de-aerated cooling water.

V321

The V321 is a large flanged valve with a stainless steel seat for high pressure drops.

The valve is suitable for a wide range of mixing applications with hot or chilled water in heating cooling and air handling systems.

If the valve is used for media at temperatures below 0 °C , it should be equipped with a heater to prevent ice formation on the valve stem.

M22, M50

The M22 and M50 Actuators are powerful actuators suitable for driving DN125 and DN150 sizes of valve types V222, V292 and V321. The actuators are available in modulating or 3-point floating versions. The 3-point floating versions are available in 24 Vac or 230 Vac voltages with and without end switches.

MG350S

The MG350S is a compact electro-mechanical actuator for controlling the VZX and MZX 2-Way and 3-Way Linear Globe Valves. The MG350S actuators are primarily designed for applications where the demands on speed and thrust are relatively small.

- Stable force control with stall protection
- Hysteresis control - intelligent response to fluctuating control signals, extending actuator life and better plant regulation
- High resolution PCBA and motor transmission for fine valve plug position and excellent flow control.
- Low power holding
- Auto adaptation to valve end stroke limits upon first power up
 - LED status indication
- Tri-color LED for operation, calibration, and alarm notification
- Removable terminal block and cable gland for ease installation

MP200

MP200 is an compact linear actuator for driving the 5 mm Frese Optima Compact PIBCV and the former VP223R Short Stroke Pressure Independent Control Valve. Versions available as either 3 point floating or 0 to 10Vdc modulating control. A full stroke run time of 60 seconds provides very precise flow control. Stroke indication and manual override on all models.

Specifications

Part number	Control	Voltage
MP200-24M	Modulating Control	0 to 10V
MP200-24F	3 Point Floating	24 V
MP200-230F		230 V

Note: The floating actuators (MP200-24F/MP200-230F) have no end switches for automatic shut off when the valve is fully open or closed. These floating actuators are intended for use with controllers with a time out facility. If the floating actuators are to be used with an on/off thermostat, a separate delay off timer should be used to cut the driven power to the actuator.

TR32/TR60 Transformer

The TR32 and TR60 are transformers moulded in thermoset plastic and mounted in a grey enclosure made of an impact-resistant, self-extinguishing thermoplastic. They can be mounted on a wall or use snap-locking on a 35 mm DIN rail (suitable for modular equipment enclosures).

The transformers are double-insulated and do not require safety grounding. Both the TR32 and the TR60 have primary and secondary terminal blocks in different connection sections.

The transformers are protected by PTC resistors on the secondary side. Reset the protection by switching the power off for 10 seconds.

Zone Valves and Actuators

VZ*08*

The VZ*08* short stroke (2.5 mm) zone valves are small linear valves designed for control of hot and chilled water in fan coils or other terminal unit applications.

These particular valves are designed to be used with thermo-electric actuators type MZ140, which is available in an on/off or a modulating variant.

Specifications

Valve types	2-way, 3-way, 3-way with bypass
Pressure class	PN16

MZ20

The long stroke MZ20 is an electro-mechanical zone valve actuator designed for use with the VZ*19* valves.

The actuator provides precise valve position and flow for good hydronic control.

Reliable long term operation is provided by the optimal design without feedback potentiometer or end switches.

PIBCV Flow Selection Chart

Water Valve Sizing Chart, Traditional Pressure Dependant Valves

Valve sizing formulae for water service

To size a valve, the following must be known: The volumetric flow rate through the valve, Q.
The differential pressure across the valve, ΔP.

Calculation of valve flow coefficient, Kv

$$K_v = Q \times \sqrt{\frac{\rho}{\Delta P}}$$

Kv = Valve Capacity (m³/h)

Q - Volume flow (m³/h)

ΔP = Pressure drop across valve (bar)

ρ = Specific gravity of fluid (kg/m³)

Calculation of valve flow rate, Q

$$Q = K_v \times \sqrt{\frac{\Delta P}{\rho}}$$

Calculation of Pressure drop, ΔP

$$\Delta P = \rho \times \left(\frac{Q}{K_v} \right)^2$$

Steam Valve Sizing Chart

Example for saturated steam:

Flow rate, (G) 4700 Kg/h
Abs. pressure upstream (p1) 850 kPa
Load pressure (ΔP_v) 160 kPa

Mark the point of intersection [3] between the line originating from the absolute upstream pressure [1] and the inclined line corresponding to the load pressure (valve pressure drop)[2].
Identify the point of intersection between point [3] found above and the flow rate of Saturated steam [4]
The last found point would corresponds to a valve with a Kvs of 63 [5]

$$P_2 > \frac{P_1}{2}$$

$$\Delta P > \frac{P_1}{2}$$

$$P_2 < \frac{P_1}{2}$$

$$\Delta P > \frac{P_1}{2}$$

$$K_{vs} = \frac{G}{31.6} \times \sqrt{\frac{v_2}{\Delta p}}$$

$$K_{vs} = \frac{G}{31.6} \times \sqrt{\frac{2 \times v^*}{p_1}}$$

Key:

Kvs = Valve flow co-efficient,
(Control valve fully open).

G = Mass flow rate (Kg/h)

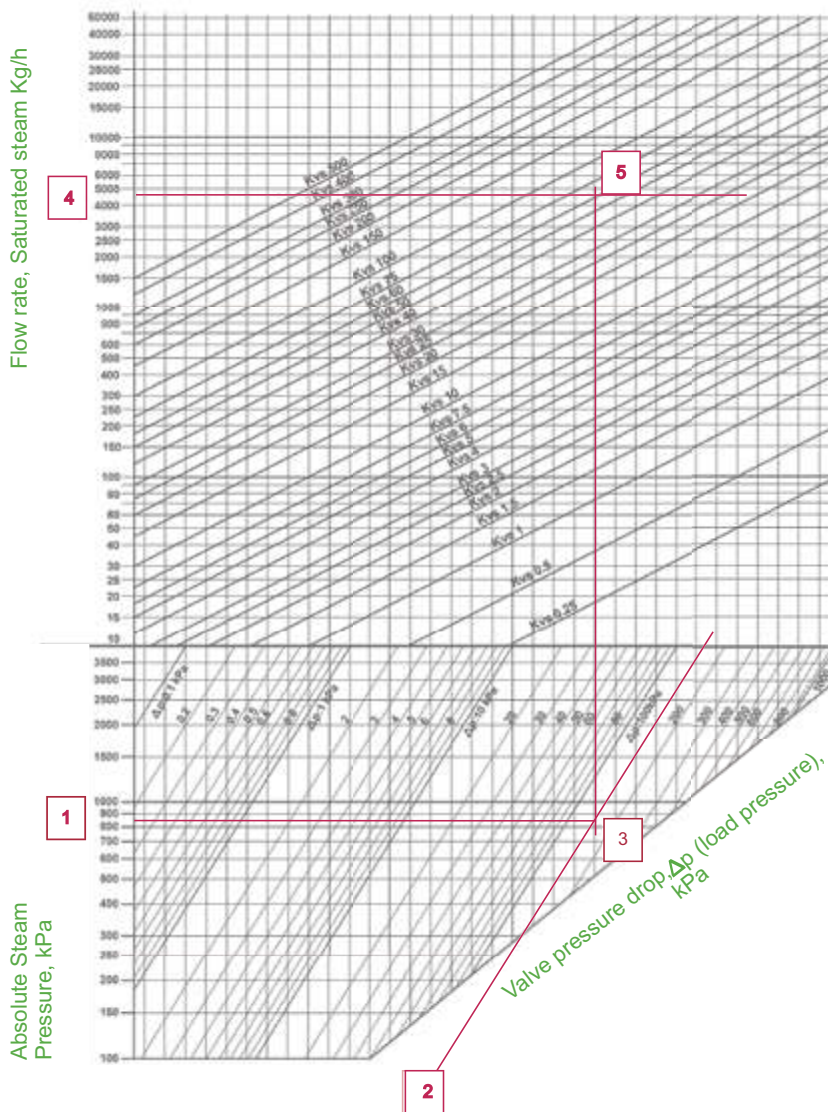

v2 = Specific volume (from steam table) for p2 and t1 condition

V* = Specific volume (from steam table) for $\frac{P_1}{2}$ and t1 condition

p1 = pressure before valve

p2 = pressure after valve

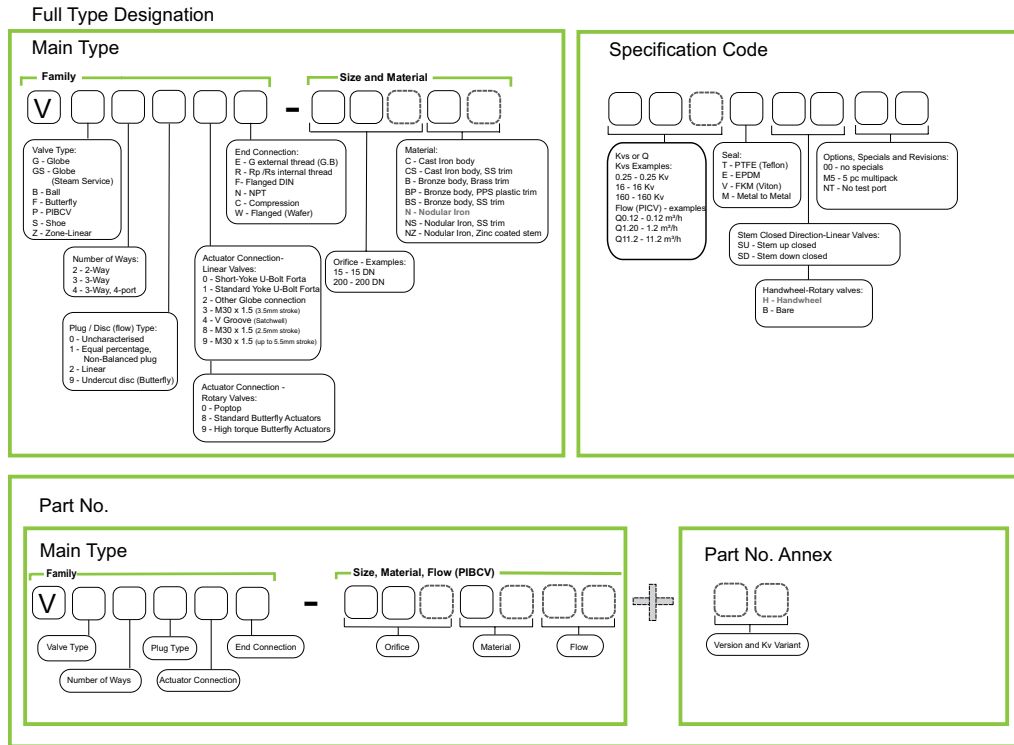

Δp = Valve Pressure drop (bar)

Ball Valves and Actuators

Overview VBB/VBS Valves with M2/M3 Actuators

Application

The VBB and VBS Series Valves with SmartX Actuators are 2-Way or 3-way, 1/2" or 3/4", characterized ball valves. The M3 and M2 SmartX Actuators are direct coupled to the VBB/VBS Series valves and accept two-position, floating or proportional control signals from a DDC system, controller, or thermostat for control of hot or chilled water, or solutions of up to 60% glycol. Typical applications include VAV reheat, fan coil units, hot and chilled water coils in the air handling units, heat pumps and unit ventilators.

Features

- Easy product selection – all actuators fit all valve bodies
- Fast, easy actuator installation – no linkage or tool required
- Flow characterizing insert provides equal percentage flow characteristic for stable, accurate floating and proportional control.
- ANSI IV seat leakage (0.01%) for both 2-Way and 2-Way valves (A and B port)
- Brass and stainless steel trim models
- Cvs from 0.3 – 10
- Normally open, normally closed, and non-spring return assemblies available
- Two-position, floating or proportional (0 – 5 VCD, 0 – 10 Vdc, 5 – 10 Vdc, or 4 – 20 mA dc)
- Proportional actuator is direct or reverse acting.
- RoHS Compliant (VBS AAssemblies)
- Reach compliant

Materials	Thermoplastic base and cover. Approved for use in air plenums.
Shipping & Storage Temperature Limit	–40–169 °F (–40–76°C).
Operating Temperature Limit at max fluid temp.	
Floating	32–140 °F (0–60 °C)
Proportional	32–140 °F (0–60 °C)
Two-Position	32–169 °F (0–76 °C)
Humidity	5–95% relative humidity, non-condensing.
Locations	NEMA 2, IEC IP31. Indoor Use Only.
Valve	
Service^a	Hot and chilled water, up–60% glycol.
System Static Pressure Limit	600 psi (4137 kPa).
Fluid Temperature Limit	20–250°F (–7–121°C).
Cv (Kv)	See Tables 4 through 7.
Close-off Pressure^b	30 psi 2-Way; 70 psi 3-Way
Differential Pressure	30 psi normal operation 20 psi quiet operation.
Seat Material	PTFE
Characterized Insert	Glass-filled PEEK
Seat Leakage	ANSI class IV (0.01%) at both A and B ports with pressure at inlet.
End Connections	NPT threaded (VBxxNxx)
Rangeability	Greater than 300:1.
Body Material	Forged brass.
Stem Material	Stainless steel anti-blow out stem with dual Viton™ o-rings.
Ball Material	Chrome plated brass (VBB series) or stainless steel (VBS series).

a. Not rated for steam service.

b. Close-off is defined as the maximum allowable pressure drop to which a valve may be subjected while fully closed.

M2/M3 and Valve Selection and Flow Direction

Ball Valve Assembly Selection Procedure

1. Select the actuator. When selecting a ball valve assembly, you must know the control signal type and voltage to first select an actuator. Consult the following tables: Table-1 covers two-position actuator specifications and model numbers, Table 2 covers floating actuator specifications and model numbers and Table-3 covers proportional actuator specifications and model numbers.
2. Select the valve body. The valve body model number is selected based on the line size (1/2" or 3/4"), ball material trim, and flow coefficient (Cv/Kv) required. Consult Table-4 and Table-5 for brass trim valve body specifications and model numbers and Table-6 and Table-7 for stainless steel trim valve body specifications and model numbers. See "Flow Coefficient Selection" for information in determining the flow coefficient.

Other considerations

1. General service conditions: Make sure the actuator is suitable for the anticipated ambient conditions and that the valve body is compatible with the system fluid temperature and pressure requirements.
2. Close-off pressure: Confirm that the VBB/VBS ball valve's close off rating is suitable for the valve control application.
3. Space requirements: If mounting space limitations are a consideration, check the actuator/valve assembly dimensions.
4. Pipe reducers: Refer to the tables herein (F-27395) for estimating effective Cvs when using pipe reducers.
5. Ordering information. You may order the actuator and valve body separately or as a factory assembly. To order a complete valve and actuator assembly, specify the valve body part number and the actuator part number separated by a "+." Example: To order actuator valve body VBB2N15 and M312A00 as a factory valve/actuator assembly, specify VBB2N15+M312A00.

Flow Direction

A notch cut into the stem indicator at the tip of the valve stem is an external indicator of where the closed portion of the ball sits internally. Check the notch position prior to assembling the actuator to verify the ball is orientated in the correct plane.

In the drawings below, the black mark on the stem indicator represents this stem notch.

Application Note for 2 and 3-Way Valves

VBB/VBS Series Ball Valves are Characterized Control Ball Valves designed so that flow through the A-port exhibits equal percentage flow, thus the A-port is the control port. In a 3-way valve, the B-port is the bypass port and flow through the B-port is designed to be less than that of the A-port. In most applications, this reduced flow compensates for the pressure drop seen by the coil supplied by the A-port.

VB-2000 Series Ball Valves with SmartX Actuators

Product description

The Schneider Electric VA, VF, and VS-2xx3-xxx-9-xx series Ball Valve Assemblies are complete actuator/valve assemblies that accept Two-position, floating, or proportional control signals from a DDC system or a thermostat, for control of hot or chilled water, or solutions of up to 50% glycol. They consist of direct-coupled SmartX Spring Return or Non-Spring Return Actuators mounted on 2-way (1/2" to 3") and 3-way (1/2" to 2") ball valve bodies. Typical applications include reheat on VAV boxes, fan coil units, hot and chilled water coils in air handling units, and unit ventilators.

Features & Benefits, and Ball Valve Assembly selection

Ball Valve Assembly Selection Procedure

When selecting a ball valve assembly, you must determine the applicable codes for the Control signal type, valve body configuration, end connection, port size, and actuator. Select a ball valve assembly part number as follows:

1. Control signal Type, Valve Body Configuration, and End Connection
Refer to Ball Valve Assemblies and select the appropriate codes for these part number fields.
2. Valve size (Flow Coefficient)
If the required flow coefficient (Cv) has not yet been determined, do so as follows:
 - a. Refer to Sizing and Selection to calculate the required Cv.
 - b. Select the nearest available Cv and corresponding valve body port code.
3. Actuator
Select the appropriate actuator and code according to Ball Valve Assemblies, based on the Control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to the applicable actuator specifications.
NOTE: If an actuator with Auxiliary switch(es) is required, you may field-assemble a ball valve assembly using a ball valve body/linkage assembly (VB-2513-500-9-xx). For information on switch-equipped actuators, refer to actuator specifications.
4. Close-off Pressure
Confirm that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.
5. Available Space
Check the appropriate dimensional figure (Figure 1 through Figure 6) and its accompanying data table for dimension details.

Feature	Benefit
Close-offs of 40 to 130 psi.	Accommodates most close-off requirements
Available in full range of line sizes, 1/2" to 3" for 2-way valves and 1/2" to 2" for 3-way valves.	Satisfies a wide range of applications
Cvs from 0.33 to 266.	Permits optimal valve sizing, minimizing the need for pipe reducers
Flow characterizing insert, made of glass-filled Noryl™.	Provides equal percentage flow characteristic so that the heat output of the coil is linear with respect to valve position
Available in both spring return and non-spring return models.	Allows Power loss mode requirement to be met for any given application
Utilizes SmartX Actuators with Two-position, floating, and proportional control.	Models to fit a wide range of applications
All VB-2000 models equipped with pigtail leads.	Eases installation. Reduced electrician costs
Low-friction seals and o-rings.	Allows the use of lower-torque actuators, reducing cost
Valve body made of forged brass ASTM B283-06.	Rated for static pressure of 360 psi at Fluid temperatures of 20 to 250 °F (-7 to 121 °C)
ANSI Class IV (0.01% of Cv) shutoff with 2-way valves.	Allows accurate control, saves energy
Choices of spring return direction.	Provides Normally Closed or Normally Open spring return
Thermally isolated mounting plate.	Protects the actuator from excess cold or heat from chilled or hot water passing through the valve. Discourages condensation
Ball Valve Body/Linkage Assemblies are available separately. They include anti-rotation clips for SmartX Actuators.	Increases flexibility and minimizes inventory

Butterfly Valve and Actuators

Butterfly Valve Assembly Overview and Ordering

Product description

Schneider Electric's Butterfly Valve line offers a wide range of two- and three-way sizes, along with electric non-spring return and spring return actuator models that operate with on/off, floating, or proportional control signals. All assemblies include industry leading butterfly valve features, stainless steel double "D" shafts, nylon 11 coated ductile iron disc machined to provide bubble tight shut off, minimum torque, and longer seat life. The tongue and groove resilient seat design with molded in O-ring eliminates the use of flange gaskets and allows for ease of maintenance or replacement of the resilient seat. These features provide years of optimum performance and reliability.

Applications

Typical applications include data centers, cooling towers, central system shutoff and bypass piping control, thermal storage, and chiller and boiler control. High Performance Butterfly Valves are ideally suited to both high pressure, high temperature, high cycle HVAC applications and mission critical HVAC applications. This includes chiller isolation, cooling tower isolation, change-over systems, large air handler's coil control, bypass and process control applications. With ANSI Class 150 rating, all valves are tested for bubble tight close-off to API 598 standards at maximum rated differential pressure.

Standard features

- 2 to 18" two-way assemblies and 2 to 16" three-way assemblies
- Chilled/hot water/glycol applications
- EPDM resilient seats with tongue and groove design and build in O-ring seal
- Stainless steel double D stem, requires no pins or screws to connect the disc and stem
- Extended neck design for temperature isolation and ease of insulation installation
- Nylon 11 coated ductile iron disc
- Wide choice of pneumatic and electric actuators and Control signals
- Cast iron lug bodies mate with ANSI class 125/150 flanges
- Bubble tight shut off
- Bidirectional flow
- Series S70 NEMA 4 actuators available in 24 or 120 Vac

High performance features

- Double offset stem/disc design
- Reduced seat wear, zero leakage, and low torque
- Blow-out proof stem
- Safety and ease of use
- Energized RTFE seat
- Zero leakage, self-adjusting for wear and easy field replacement
- Pressure assisted, but not pressure dependent seat design
- Optimal performance and sealing at high or low differential pressures
- Adjustable PTFE packing
- Packing can be adjusted while the valve is in service
- Dead end rating equal to nominal pressure rating
- Allows the control valve to function as an isolation valve

Ordering Butterfly Valve Assemblies

Specify nine part number fields for the Butterfly Valve assembly part number.

Flow Pattern ^b

Three-way valves are configurable during the order process. When placing an order manually through customer care please note the Configuration Number above. When ordering online through iPortal, please select the proper configuration from the drop-downs on the Cart Page. Refer to flow diagram above.

2.5" to 18" 2-Way High Performance Assemblies

Product description

Schneider Electric's High Performance Butterfly Valves are ideally suited to both high pressure, high temperature, high cycle HVAC applications, and mission critical HVAC applications. This includes chiller isolation, cooling tower isolation, change-over systems, large air handler's coil control, bypass and process control applications.

With ANSI Class 150 rating, all valves are tested for bubble tight close-off to API 598 standards at maximum rated differential pressure.

Features

- Double offset stem/disc design
 - Reduced seat wear, zero leakage, and low torque
- Blowout-proof stem
 - Safety and ease of use
- Energized RTFE seat
 - Zero leakage, self-adjusting for wear and easy field replacement
- Pressure Assisted, but not Pressure Dependent Seat Design
 - Optimal performance and sealing at high or low differential pressures
- Adjustable PTFE packing
 - Packing can be adjusted while the valve is in service
- Dead end rating equal to nominal pressure rating
 - Allows the control valve to function as an isolation valve.

Specifications	
Service	Hot water, chilled water, condenser water, Steam
Fluid temperature Limits	-40 to 500 °F
Max Steam Pressure	On/Off 150 PSI Proportional 50 PSI
Sizes	2.5" to 18"
Flow Characteristic	Modified Equal Percentage
Leakage	Bubble Tight
Materials	
Body	Carbon steel
Stem	17-4 stainless steel
Disc	316 stainless steel
Seat	RTFE

Damper Actuators

Spring Return Direct Coupled SmartX Actuators

Value-driven general purpose applications

Mx4D-703x and Mx4D-803x Series

- Two position models controlled by SPST controller
- Floating models controlled by SPDT floating controllers
- Jumper selectable control function direct/reverse action
- Floating and proportional models automatically adjust input span to match the damper/valve travel

Damp and harsh environment applications

Mx40-717x Series

- Direct mount to round or square damper shaft
- 150 lb-in (17 N-m) torque rating, overload protection throughout rotation
- Oil immersed gear train provides continuous lubrication
- Automatic current sensing motor control provides extended reliability and repeatable timing
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- 5-year warranty, NEMA 4 housing (IEC IP56)
- Can be double mounted (gang mounting) to accommodate high torque application requirements to 4 actuators
- MS40-717x models provide position feedback signal

High performance HVAC applications

Mx70-704x Series

- Direct mount to round or square damper shaft
- 35 lb-in (4 N-m) torque rating
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- True mechanical clockwise or counter clockwise spring return operation for reliable, positive close-off in airtight applications
- Visual position indicator
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating

Mx41-7xx Series

- Direct mount to round or square damper shaft
- 60 lb-in (7 N-m) torque rating
- 133 lb-in (15 N-m) torque rating
- Overload protection throughout rotation
- Operational built-in auxiliary switches
- Provides true mechanical clockwise or counterclockwise spring return operation for reliable positive close-off in airtight applications
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54 rating
- Manual override

High torque HVAC applications

Mx41-730x Series

- 270 lb-in (30 N-m) of torque with mechanical spring return, manual override, and Brushless DC Motor.
- Stall protected throughout rotation and reversible mounting.
- Models for two position 24 Vac/Vdc, and two position 100 – 230 Vac applications
- Models for 2 – 10 Vdc input signal applications (field configurable for other input signals) with a position feedback signal and direct/reverse acting control mode selection switch on both side.
- Models for auxiliary switch applications.
- Models for auxiliary switch applications.
- Models for NEMA 4 / IP66 outdoor applications.
- 95° of rotation, adjustable with mechanical end stops and graduated position indicator showing 0° to – 95°
- Can be double-mounted (gang mounting) to accommodate high torque application requirements.

Mx4D-703x and Mx4D-803x Series 30 lb-in SmartX Direct Coupled Damper Actuators

Product description

Designed for controlling air dampers in building systems that require fail safe return, with two position, floating or proportional control.

Features

- Two position models controlled by SPST controller
- Floating models controlled by SPDT floating controllers
- Jumper selectable control function direct/reverse action
- Spring return models provide 30 in-lb (3.4 N-m) of torque
- Polymer housing rated for NEMA 2/IP54
- Overload protection throughout stroke
- Floating and proportional models automatically adjust input span to match the damper/valve travel
- Compact size allows installation in limited space
- Manual override allows positioning of dampers and valves
- Directly mounts to 1/2 – 3" Schneider Electric ball valves.

Specifications

Control signal	Refer to the tables for actuator models and control types
Power inputs	See table.
Connections	3 ft (91 cm) appliance (see * in table below) or 10 ft. (3m) plenum cables enclosure accepts 1/2" (13mm) conduit connector.
Electrical outputs	Position Feedback voltage (proportional or floating only): For voltage rangers, the feedback signal is the same range as the input signal. The 4–20 mA current range and floating actuators have a 2–10 Vdc feedback signal. The feedback signal can supply up to 0.5 mA to operate up to four additional slave actuators.
Mechanical outputs	Travel: 95° nominal. Manual override: allows positioning of damper or valve using manual crank. RA/DA Jumper: Permits reverse acting/direct acting control (MS4D models only/)
Ambient Temperature Limits	Shipping and storage: -40–160°F (-40–71°C) Operating: -22–140°F (-30–60°C) Humidity: 15–95% RH, non-condensing
Location	NEMA 1. NEMA 2. UL Type 2 (IEC IP54) with customer supplied water tight conduit connectors. Enclosure is air plenum rated.

Damper Actuators

Mx4D-703x and Mx4D-803x Series 35 lb-in SmartX Direct Coupled Damper Actuators

Product description

For spring return applications requiring floating, two-position, or proportional modulation control of dampers and valves in HVAC systems. Directly mounts to 1/2"–3"Schneider ball valves.

Features

- Direct mount to round or square damper shaft
- Overload protection throughout rotation
- Optional built-in auxiliary switches
- True mechanical clockwise or counter clockwise spring return operation for reliable, positive close-off in airtight applications
- Visual position indicator
- Direct acting or reverse acting control mode available on proportional models
- Rotation limiting available
- Rugged die-cast housing for NEMA 2/IP54

Specifications

Control signal	On-off, SPST control contacts or Triacs (500 mA rated).
Power inputs	See table.
Connections	MA40-704x and MA40-704x-501 – 3ft. (91 cm) long , appliance cables, 1/2" conduit connector. For M20 Metric conduit, use AM-756 adaptor: MF40-7043 and MF40-7043-501 – 3ft. (91 cm) long, plenum-related cables, 1/2" conduit connector. For M20 Metric conduit, use AM-756 adaptor.
Electrical outputs	Position Feedback voltage "AO" 2–10 Vdc (maximum 0.5mA) output signal for position feedback or operation of up to four slave actuators. One auxiliary switch (select models). SPDT 6a resistive @ 24 Vac or 250 Vac.
Mechanical outputs	Travel rotation is limited to 95° ± maximum, adjustable from 40–95° with a mechanical stop. RA/DA switch: selects direct acting or reverse acting for proportional models. Position Indicator: Visual indicator 0–1 (0 is the spring return position).
Ambient Temperature Limits	Shipping and storage: -40–160°F (-40–71°C) Operating: -22–140°F (-30–60°C) Humidity: 5–95% RH, non-condensing

Mx41-730x Series 270 lb-in SR SmartX Damper Actuators

Mx41-730x Series Spring Return SmartX Actuators are available with two position 24 Vac/Vdc, Two position 100–230 Vac, and 2–10 Vdc input signal models for other input signals such as floating and pulse width modulating (PWM).

Features

- Mechanical spring return, manual override and Brushless DC Motor
- Stall protected throughout rotation and reversible mounting.
- Models for auxiliary switch applications
- Direct mount to 1/2"–3/4" round or 1/2"–11/16" square damper shafts of to 3/4"–1.05" round with the field removal of a clamp insert.
- 95° of rotation, adjustable with mechanical end stops and graduated position indicator showing 0°–95°.
- Can be double-mounted (gang mounting) to accommodate high torque application requirements.
- 5-year warranty

Specifications

Control signal	Two position, 2–10 Vdc ¹
Optional control signal (MS41 models only)	Floating, Pulse width modulating (PWM), Adjustable start point and Span DC signal inputs with use of the BEL-ZTH US handheld interface module for field programming

Overview - NSR SmartX Damper Actuators

High performance HVAC applications

Mx41-60xx Series

- 44 lb-in (5 N-m) and 88 lb-in (10 N-m) torque.
- Compact lightweight design.
- Easy-to-see position indicator.
- Self-adapting capability for maximum flexibility in damper positioning.
- Quiet, low-power operation.
- Manual override.
- Plenum cable standard.
- Independently adjustable dual auxiliary switches option available (Mx41-6083-502).
- Feedback position output signal available (MS41-6043/6083 series).
- c-UL-us LISTED and CE marked.

Mx41-6153 Series

- Synchronous motor technology with stall protection.
- Unique self-centering shaft coupling.
- Manual override.
- 133 lb-in (15 N-m) torque.
- 5 preload as shipped from factory
- Mechanical range adjustment capabilities,
- Independently adjustable dual auxiliary switches option available (MS41-6153-502),
- Built-in 1/2" conduit connection.
- c-UL-us LISTED and CE marked.

Damp and Harsh Environment Applications

Mx41-63xx Series

- 300 lb-in (34 N-m) torque.
- NEMA Type 4 housing (IEC IP56)
- Custom automatic current sensing motor control provides extended reliability and repeatable timing.
- Direct coupled to damper shaft with dual industrial hardened universal mounting clamps.
- Integral wiring for proportional control by 2–10 Vdc or 4–20 mA dc.
- Clockwise or counterclockwise rotation is determined by actuator mounting position.
- Manual override for ease of installation and manual operation of damper.
- Accurate 92° travel digitally controlled.
- Integral position indication scale.
- Rugged die-cast housing.
- Oil immersed gear train provides continuous lubrication
- Rated for operating temperatures up to 140°F (60°C).
- 5 year warranty.
- MS41-634x SmartX Actuators can be double mounted (gang mounting) to accommodate high torque application requirements (2 to 4 actuators).
- Position feedback signal.
- c-UL-us LISTED and CE marked.

Damper Actuators

Mx41-60x3 Series

44 and 88 lb-in NSR SmartX Direct Coupled Damper Actuators

These direct coupled 24 Vac non-spring return rotary electric SmartX Actuators are designed for three position (floating) control of the dampers

Features

- Compact, lightweight design.
- Easy-to-see position indicator.
- Self-adapting capability for maximum flexibility in damper positioning.
- Quiet, low-power operation.
- Plenum cable standard.
- Independently adjustable dual auxiliary switches option available (Mx41-6083-502).
- Feedback position output signal available (MS41-6043/6083 series).

Specifications	
Control signal	MF41-60x3 – Floating three-position control, 24 Vac. MS41-60x3 – Proportional, 0 to 10 Vdc; input resistance 100 kW
Power inputs	See table.
Connections	3' (0.9 m) appliance cable, 18 AWG plenum-related leads
Electrical outputs	Position feedback for MS41-6043/6083: 0–10 Vdc, 1mA. Auxiliary switches: dual auxiliary switches available with MF41-6083-502, MS41-6083-502 when these actuators are ordered as separate units. Auxiliary switches are not offered with factory ball valve assemblies
Mechanical outputs	Travel: Normal angle of rotation is 90° limited to a maximum of 95°. Field adjustable to limit travel on either end of stroke.
Ambient Temperature Limits	Shipping and storage: -40–158°F (-40–70°C) Operating: -25–130°F (-32–55°C) NOTE: Check the valve operating temperature limit. The minimum valve temperature limit is 20°F (6.7°C) 5–95% non-condensing.
Location	NEMA Type 2 (IEC IP54)
Agency Listings	c-UL-us LISTED per UL 873 and CAN C22.2 No.24-93. CE compliant to directive LVD, EMC, RoHS2.

Mx41-6153 Series 133 lb-in NSR SmartX Direct Coupled Damper Actuators

The direct coupled 24 Vac non-spring return electric SmartX actuator is designed for modulating and three-position control of building HVAC dampers requiring up to 133 lb-in (15 N-m) torque.

Features

- Synchronous motor technology with stall protection
- Unique self-centering shaft coupling
- 5° preload as shipped from factory
- Mechanical range adjustment capabilities
- Independently adjustable dual auxiliary switches option available (MS41-6043-502).
- Built-in 1/2" conduit connection

Mx41-634x Series
300 lb-in NSR SmartX Direct Coupled Damper Actuators

Direct Coupled SmartX actuators are designed to be used in both damper and valve control applications. The MS41-634x series actuators are over the shaft non-spring return actuators compatible with 0–10 Vdc or 4–20 mA dc¹ control signals.

Features

- Custom automatic current sensing motor control provides extended reliability and repeatable timing
- Direct coupled to the damper shaft with dual industrial hardened universal mounting clamps
- Clockwise or counterclockwise rotation is determined by actuator mounting position
- Accurate 92° travel digitally controlled
- Integral position indication scale
- Oil immersed gear train provides continuous lubrication
- Rated for operating temperatures up to 140 F (60 C)
- 5 year warranty
- MS41-634x SmartX Actuators can be double-mounted (gang mounting) to accommodate high torque application requirements (2 to 4 actuators)
- Position feedback signal

Specifications

0453X Series Two-position Damper Actuators

The 0453L, light duty Damper Actuators are designed for a variety of Two-position, spring return, damper applications. The 0453L uses a two-wire thermostat control.

The 0453H medium duty Damper Actuators are designed for a variety of Two-position, spring return damper applications. The 0453H uses a two-wire thermostat control.

The 0453R heavy duty Damper Actuators are designed for a variety of Two-position, motor open and Motor closed damper applications. The 0453R uses a three-wire thermostat control.

Features

- Available with end switch
- Linkage or direct drive available
- Hysteresis synchronous motor with “lost motion” drive to protect gear train from closing shock

Foot Mounted Actuators

Overview: Foot Mount Actuators

Product Overview

MA-3/4xx Series: These actuators provide two-position operation of dampers, valves, and other equipment requiring the return to normal position upon power interruption.

MC-351/421/431: These actuators provide two-position operation of dampers or valves in heating, ventilating, and air conditioning systems, and similar applications where return-to-normal position is not required.

MP-3xx Series, MP-4xx Series, MP-2xxx Series, and MP-4xxx Series: These actuators are used for two-position, floating, and proportional control of dampers, valves, and program switches in heating, ventilating, air conditioning, and similar applications. Hazardous location models offer a sturdy cast aluminum case with bolted cover. They have two 3/4" pipe tapped openings for joints with rigid metal conduit. All wiring is brought out to separate terminals for ease of installation. These factory enclosure and actuator assemblies are Underwriters Laboratories Listed.

MP-9xxx Series Reversible and Proportional Electric Actuators: These actuators provide control of heavy dampers, large valves, and other high torque applications in heating, ventilating, air conditioning, and similar applications which do not require return to a normal position.

The CP-8301-xxx electronic actuator drive is designed to process a variable 2 to 15 Vdc signal from a controller to provide proportional control of an electric gear train actuator.

The CP-8391-716 and 913 electronic actuator drives are designed to process a variable 4 to 20 mA dc signal from a controller to provide proportional control of an electric gear train actuator.

The CP-9301 and CP-9302 electronic actuator drives process a variable input signal from a controller to provide proportional control of an electric gear train actuator.

MC-351/421/431 NSR Two-Position Actuators

This actuator provides two-position operation of dampers or valves in heating, ventilating, and air conditioning systems, and similar applica- tions where return-to-normal position is not required.

Features

- Two-position actuators controlled by SPDT controller.
- Non-spring return.
- 24 and 120 Vac models available.
- SPDT auxiliary switch is standard.
- Rugged die cast aluminum housings.
- Oil immersed motor and gear train.

MP-3/-4xx, MP-2/-4xxx Series Reversible and Proportional Electric Actuators

The MP Series Actuators are used for two-position, floating, and pro- portional control of dampers, valves, and program switches in heating, ventilation, and air conditioning applications or similar applications.

Features

- Proportional actuators with built-in feedback potentiometers.
- Spring return and non-spring return models available.
- 24 Vac, 120 Vac, and 240 Vac models are available.
- Die cast housings with four 1/2 in. conduit openings.
- Oil-immersed motor and gear train.

Specifications

Input Control signals: Refer to the Model Table for input control signal capability versus specific actuator models.	
Floating	Requires one Single Pole Double Throw (SPDT) switch with floating (center off) position rated at 0.9 amps at 24 Vac or two Single Pole Single Throw (SPST) switches rated at 0.9 amps at 24 Vac
Two-position SPDT SPST	Requires snap acting switch rated at 0.9 amps at 24 Vac Can be used with certain spring return actuators. Switch must be rated to handle actuator power requirements
Microtherm Proportional	Electrical system with the following typical controllers: PP-22x Series, TP-1xx Series, TP-2xx Series, TP-3xx Series, TP-4xx Series, TP-1xxx Series, and TP-1xxxx Series Control of a single actuator
Standard Sequencing	Five-position Used typically for adjustable minimum position (five positions) of an economizer actuator Control of two actuators in sequence
Slidewire and paralleling	Requires AE-504 paralleling relay AE-504 accepts 100Ω to 1000Ω slidewires
Voltage	Vdc (TAC System 8000) Requires CP-8301-xxx or CP-9301-xxx Series of solid state actuator drives. Refer to the Model Table
Current mAdc	Requires CP-9302-xxx Series of solid state actuator drives. Refer to the Model Table
Connections	MP-3xx, 4xx, 2xxx, 4xxx Coded screw terminals Models -600 Suffix Coded screw terminals except for input signal which are color coded pigtails
Power Requirements	Refer to the Model Table to determine power requirements
Torque	Refer to the Model Table to determine the actuator torque rating
Nominal damper area	Actuator sizing should be done in accordance with damper manufacturer's specifications
Spring return	Refer to the Model Table for models that are spring return

MP-9xxx Series Reversible and Proportional Electronic Actuators

Reversible and Proportional Electric Actuators

These actuators provide control of heavy dampers, large valves, and other high torque applications in heating, ventilating, air conditioning, and similar applications which do not require return to a normal position.

Features

- High torque proportional gear train actuators accept the following signals:
 - 100 to 1,000 slidewire (requires AE-504).
 - SPDT floating or snap-acting controller.
 - Variable Vdc.
 - Variable mAdc.
- Torque to 1,600 lb-in.
- Available in 120 Vac models.
- Standard SPDT auxiliary switch.
- Rugged die cast aluminum housings.
- Oil immersed motor and gear train.

Specifications	
Control circuit	Requires SPDT switch with neutral (floating) or two-position and proportional
Shaft Rotation	Reversible proportional can stop at any point in the stroke
Auxiliary switch	Adjustable SPDT snap-acting Factory set to close one contact and open the other at end of CW stroke.

CP-9301 Series Electronic Actuator Drive

The CP-9301 and CP-9302 electronic actuator drives process a variable input signal from a controller to provide proportional control of an electric gear train actuator. The CP-9301 is preset at the factory for voltage input. The CP-9302 is factory preset for current input and has additional wiring for connection to an override switch, for those applications requiring an external override of the input signal. These drives are equipped with built-in jumpers and adjustable potentiometers, so that the type of input signal, deadband, input span, and start point may be reset in the field when necessary.

Features

- Mounts directly onto proportional, electric, gear train actuators.
- Power is supplied directly from the actuator.
- Jumpers for selecting either voltage or current input, as well as 3% or 5% deadband.
- Adjustable span and start point potentiometers.

Specifications	
Mounting	Directly to an actuator. The drive may be mounted on either the left or right side of the actuator, in a conduit opening adjacent to the low voltage wiring compartment.

a - Units with a "-2" suffix, e.g. MP-xxxx-xxx-2-x, include a built-in transformer (used for Microtherm ® or with AE-504) with secondary leads wired externally to terminals 7 (Blue, 12 Vac) and 8 (Red, Vac) of the actuator. Caution: When using the CP-9301 or CP-9302 with actuators containing an internal transformer, disconnect and tape off the red and blue leads before installing and powering the device. Failure to do so can result in damage to the actuator drive. Note: Models prior to "-2" suffix had transformer wired directly to potentiometer. To disconnect the transformer, remove the back plate of the actuator, then disconnect and tape the transformer leads.

Globe Valves and Actuators

Overview VB-7000 Series Globe Valves

2-way and 3-way globe valves

The Venta VB-7200 Series ½" to 2" 2-way globe valves feature the industry's most high-performing, energy-efficient control valves for chilled water, hot water, and steam applications. The Venta VB-7300 Series ½" to 2" 3-way globe valves provide efficient control for chilled and hot water applications. Units have a patented precision plug for high rangeability, providing efficient heat transfer over a broad range of HVAC applications. The Venta seal design provides tight close-off to ensure energy efficiency and provides a high tolerance to high differential pressures.

Venta globe valves are used for Two-position, floating, or proportional control applications. Valve assemblies may be purchased from the factory or purchased separately, requiring a linked actuator.

Features

- High rangeability provides fine, accurate control for more efficient, responsive, and comfortable regulation.
- Tight sealing with ultra-low energy leakage on shutoff for energy conservation with soft seating
- High differential-pressure rating of up to 87 psi for reliable operation in demanding applications
- Very low Cv models (as low as 0.1) for precise control of small and light-load applications
- Multiple Cv and fitting choices to match loads and piping
- RoHS compliant product is environmentally friendly and meets ANSI, PED, CRN and other standards.
- Stroke positions are suitable for all Schneider Electric actuators.
- Stem strength exceeds:
 - 600 lb. force on 2-way and mixing valves
 - 300 lb. force on diverting valves

DANGER: Do not use these valves for combustible gas applications. They are not rated for combustible applications; use in these applications could result in gas leaks and explosions.

Ordering VB-7000 Series Globe Valves

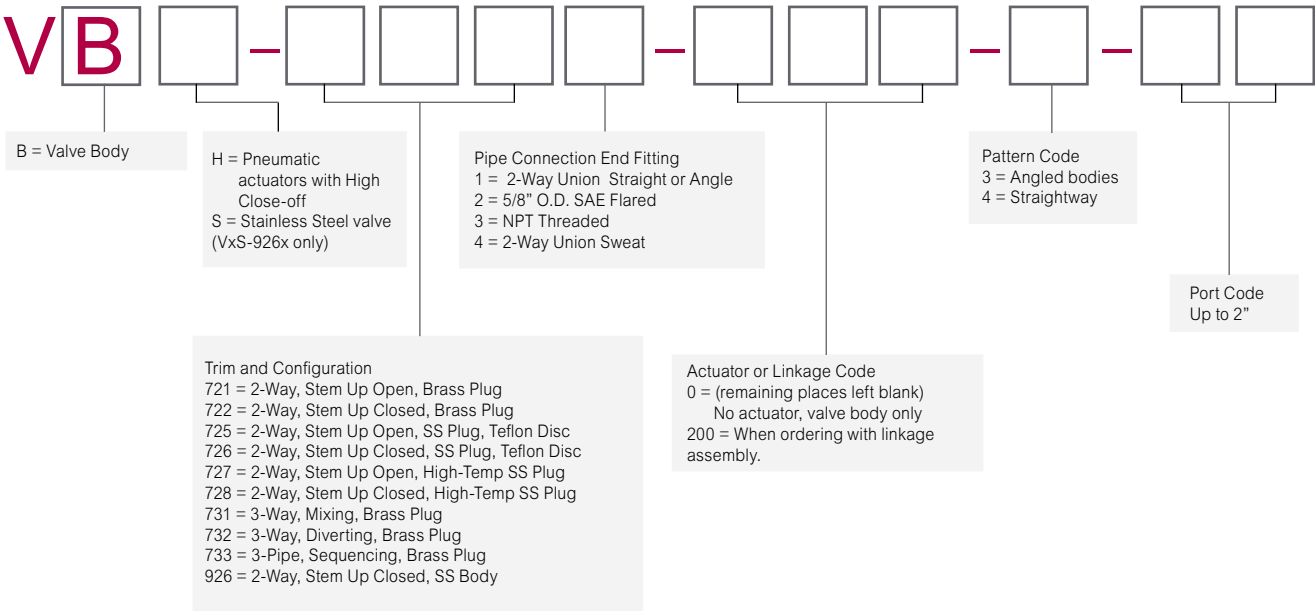

To determine the valve actuator assembly part number, specify the following six part number fields.

Refer to the guide below.

For water, steam, glycol and similar non flammable, non toxic fluids, choose based on the Pg. 36, 2. VB-7000 sizing and selection Above 2", go to Pg. 97, 5. VB-8/9000 Series Globe Valves sizing and selection .

a - To minimize noise, ensure the flow rate in the piping is less than 10 ft (3m) / second and the differential pressure is less than 35 psi (241 kPa). Operating with differential pressures above 35 psi may result in additional noise but is acceptable up to 87 psi (600 kPa). Operating within the cavitation zone may result in noise and internal valve damage.

b - Maximum recommended differential pressure in open position. Do not exceed recommended differential pressure (pressure drop), as integrity of parts may be affected.

a - To minimize noise, ensure the flow rate in the piping is less than three meters (10ft)/second and the differential pressure is less than 35 psi (241 kPa). Operating within the cavitation zone or an operating differential pressure above 35 psi (241 kPa) may result in additional noise but is acceptable up to 87 psi (600 kPa).

b - The VB-7363-0-4- series has stainless steel trim.

c - These part numbers do not have RoHs compliant nuts and tail pieces.

d - Refer to Seat Leakage Classes table.

3-Way flow patterns

2- & 3-way valves sizing for water

Two-position

Two-position control valves are normally selected “line size” to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of “available pressure,” (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional and floating

Proportional and floating control valves are usually selected to take a pressure drop equal to at least 50% of the available pressure. As available pressure is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results.

2.1 Conventional heating system

Design Temperature Load Drop °F (°C)	Recommended Pressure Drop (% of Available Pressure)	Multiplier on Load Drop
60 (33) or more	50%	1x Load Drop
40 (22)	66%	2x Load Drop
20 (11)	75%	3x Load Drop

Reducer affects

On full flow bodies, offset the affects of directly connected reducer(s) by choosing flow coefficients 6% or more higher.

Cv (Flow coefficient) determination

The valves' water capacity is based on the following formula:

$$Cv = \sqrt{\frac{GPM}{\Delta P}} \text{ or } Cv = GPM \sqrt{\frac{\text{Specific Gravity}}{\Delta P}}$$

Where:

Cv = Coefficient of flow

Cv is defined as the flow in GPM with ΔP = 1 psi with the valve completely open

GPM = U.S. gallons per minute (60°F, 15.6°C)

ΔP = Differential pressure in psi (pressure drop)

Proportional 3-way valves

Recommended pressure drop - bypass application: 50% of available pressure, or equal to pressure drop through the load at full flow.

3-way valves in the return used to control output by throttling water flow to the load (bypass applications) are controlling output in the same manner as throttling 2-Way valves, and must be selected using the same high pressure drops if good control results are to be obtained.

Recommended pressure drop - constant flow applications: 20% of available pressure, or equal to 1/4 of the pressure drop through the load at full flow.

3-way valves used with individual pumps to control output by varying water temperature to the load (constant flow applications) are controlling output by mixing two water sources at different temperatures and do not require high pressure drops for good control results.

Water capacity graph instructions

To select the appropriate valve Cv from the graph:

1. Select the required flow from the “Flow in GPM” axis.
2. Select available pressure drop from the “Pressure Drop in psi” axis.
3. Select the appropriate line and follow to the Capacity Cv (Kv) listing and choose the closest valve Cv flow coefficient.
4. Confirm the selection by calculation from the water equations.

2-way flow, temperature and materials

2.2 Flow characteristics

2-way valves with brass plugs have modified equal percentage flow curves and valves with stainless steel plugs have modified linear flow curves. With modified equal percentage flow curves, for equal increments of valve stem stroke, the change in flow rate with respect to valve stroke may be expressed as a constant percent of the flow rate at the time of the change. The change of flow rate with respect to valve stroke is relatively small when the valve plug is near the valve seat and relatively high when the valve plug is nearly wide open. With modified linear flow curves, the flow is directly proportional to the valve stem position.

2.3 Temperature pressure ratings

Consult the appropriate valve linkage Installation instructions for the effect of valve body ambient temperatures on specific actuators. Ratings conform to published values and disclaimer. VB-72xx-0-4-P (Cast Bronze Body) Standards: Pressure to ANSI B16.15 Class 250 with 400 psig up to 150° F decreasing to 321 psig at 281° F, ASTM B584

Caution: Pressure/temperature ratings are for the body only, not the piping. Consult ANSI 816.22 for ratings of solder joint fittings. The lowest piping component ratings are the high limit.

2.7 Flow characteristics

3-way valves are designed so that the flow from inlet ports, (A and B), to the outlet port (AB) is modified linear.

3-way diverting valves are designed so that the flow from the inlet port (B) to the outlet ports (A and AB) is modified linear.

Sequencing valves have both ports (A and B) closed off in the center of stroke and have modified linear flow for each port as it opens to supply it's coil.

Rangeability is greater than 100:1 for both the A and B ports.

2.3 Temperature pressure ratings

Cavitation limitations on valve pressure drop

A valve selected with too high a pressure drop can cause erosion of seals and/or wire drawing of the seat. In addition, can cause noise, damage to the valve trim (and possibly the body), and choke the flow.

Do not exceed the maximum differential pressure (pressure drop) for the valve selected. The following formula can be used on higher temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:

$$P_m = 0.5 (P_1 - P_v)$$

Where:

P_m = Maximum allowable pressure drop (psi)

P₁ = Absolute inlet pressure (psia)

P_v = Absolute vapor pressure (psia)

Note: Add 14.7 psi to gauge supply pressure to obtain absolute pressure value. For example, if a valve is controlling 200°F water at an inlet pressure of 18 psig, the maximum pressure drop allowable would be:

$$P_m = 0.5 [(18 + 14.7) - 11.53] = 10.6 \text{ psi}$$

(Vapor pressure of 200°F water is 11.53 psia)

Systems where cavitation is shown to be a problem can sometimes be adjusted to provide higher downstream back pressures. Valves having harder seat materials should be furnished if velocities are excessive.

Saturated steam valve selection for ½” to 6” valves (2-way only)

Selection instructions

Warning: pressure reducers do not lower boiler temperatures significantly, resulting in superheated steam. Select only steam valves which can withstand temperatures near the original boiler temperature.
Caution: Do not size a steam valve with a pressure drop greater than 42% of the absolute pressure.

Actuator must be rated to provide adequate Close off pressure.
Two-position control: Unless otherwise specified, select line-size, 2-Way valves, stem-up open or closed and are normally sized using a minimum of 10% of inlet pressure (psig).

- Proportional**
- 1. Go to rows which are nearest to minimum pounds/hour flow required.
 - 2. Go to columns nearest to the assured supply pressure.
 - 3. Note Cv values at the column/row intersection.
 - 4. Select the listed valve Cv which provides adequate flow.
 - 5. If reducers are used, expect flow to be reduced as much as 15%.

Overview of VB-7000 ½” to 2” Valve Actuator Assemblies

Globe valve assemblies

The VA, VF, and VS-7000 series Linked Globe Valve Assemblies are complete actuator/valve assemblies that accept Two-position, floating or proportional control, respectively, from a DDC system or from a thermostat, for control of hot water, chilled water and steam coils. These valve assemblies consist of linked spring return and non-spring return actuators mounted on ½” to 2” (15 mm to 50 mm) 2-way and 3-way globe valve bodies, using a specially designed linkage assembly. 3-way assemblies are available for mixing (½” to 2”) and diverting (½” to 2”) applications. Typical applications include reheat on VAV boxes, fan coil units, hot and chilled water coils in air handling units, unit ventilators, and central system applications. Kits are available separately to allow field assembly of SmartX actuators to valve bodies.

Globe valve assembly selection procedure

When selecting a globe valve assembly, first determine the applicable codes for the Control signal type, valve body configuration, end connection, port size and actuator according to Assembly Ordering on the pages that follow. Select a globe Valve assembly part number as follows:

1. Control signal type, valve body configuration, and end connection

Refer to Assembly Ordering and select the appropriate codes for the part-number fields.

2. Valve size (flow coefficient)

If the required flow coefficient (Cv) has not been determined, do so as follows:

Refer to Sizing and Selection to calculate the required Cv.

Select the nearest available Cv value and corresponding valve body port code from Assembly Ordering.

3. Actuator and linkages

Select the appropriate actuator and code, according to Assembly Ordering on the next pages based on the Control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to Pg. 65, 4. VB-7000 Series Globe Valve Actuators and Linkages for applicable actuator specifications.

Note: Linkages shown in Specification tables are supplied with the actuator. When shown in Optional accessories the linkage must be ordered separately.

4. Close-off pressure

Confirm, with respect to actuator close-off capacity, that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/ actuator combination is not valid.

5. Available space

If available space is a consideration, check the appropriate figure in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

1- The Mx51-720x, Mx61-720x actuator are higher force versions of the Mx51-710x for large valves and high close-off applications.

2- Forta actuators have universal inputs for proportional and floating operation.

$$C_v = \frac{GPM}{\sqrt{\Delta P}} \quad \text{Where } \Delta P \text{ is measured in psi} \quad kvs = \frac{C_v}{1.156} \quad kvs = \frac{m^3/h}{\sqrt{\Delta P}} \quad \text{Where } \Delta P \text{ is measured in bar} = 100 \text{ kPa}$$

d - Close-off ANSI IV (.01%) for soft seats.

e - Close-off pressure ratings describe only the differential pressure which the actuator can close-off with adequate seating force. Consult valve body specifications for other limitations. The rating value is the pressure difference between the inlet and outlet ports.

f - Normally open (N.O.) assembly using stem up open valve body.

g - Normally closed (N.C.) assembly using stem up closed valve body.

h - Metric thread 15 to 80 mm (Rp 1/2 to Rp 3).

j - Valve body and actuator size determine the close-off capabilities. Example: All 1/2", 2-Way globe valves will make the same close-off regardless of the Cv rating for a given actuator.

c - Mixing Valves A port seat leakage ANSI IV, B port seat leakage ANSI III, Diverting Valves seat leakage is ANSI III.

e - Dual actuators are not available as factory assemblies.

Some factory assembly may be available but components may be ordered separately for field assembly.

f - Shown for field assembly.

MG350V Globe Valve NSR SpaceLogic Actuators

MG350V

MG350V globe valve actuators are non-spring return electro-mechanical actuators for the control of two-way and three-way globe valves for fan coils, unit ventilators, reheat, cooling units, perimeter heating, and other applications.

Proportional, Floating, and Pulse Width Modulated (PWM) models are available for direct mounting on ½" to 2" VB-7000 globe valves. The MG350V actuators are also compatible with older field installed ½" to 1¼" VB-9000 globe valves as well as other valves (with the addition of AV-800 Globe Valve Adapters).

MG350V

Benefits

- Tri-color LED status indication for motion indication, auto calibration, and alarm notification
- Auto calibration provides precise control by scaling the Input signal to match the exact travel of the valve stem.
- Proportional models with and without a position output signal with field selectable 2 to 10 VDC and 0 to 10 VDC Input signals and selectable Input signal action (reverse or direct acting)
- Floating and Two-position models available with and without a position output signal
- Pulse width modulated (PWM) models with field-selectable 0.59 to 2.93 sec and 0.1 to 25.5 sec input signal ranges with a position output signal
- Stall protected throughout stroke
- Manual override with automatic release.
- Position feedback output signal models include field selectable 2...10 Vdc or 0...5 Vdc output signal.
- Removable wiring screw terminal with ½" conduit opening
- Integral linkage and self-adjusting valve position indicator

*The CE mark indicates RoHS2 compliance. Please refer to the CE Declaration of Conformity for additional details.

SpaceLogic M400 M800 and M1500 NSR Actuators

M400A (VB) / M800A (VB) / M1500A (VB)

M400A (VB)/M800A (VB)/M1500A (VB) Series Non-Spring Return linear actuators are available in U-Bolt (Mx00A) and Screw Mount (Mx00A-VB) style for Schneider Electric globe valves with AV-821 linkage kits for mounting to VB-7000 valves. The Screw Mount style screws directly to the bonnet nut on VB-7000 valves (no adapter required). Applications include Chilled or hot water and steam.

Benefits

- Field-selectable input signals include reverse and direct-acting, floating or proportional plus proportional sequencing input signal ranges.
- Floating configuration controlled by a SPDT floating controller
- Proportional configuration - 0 to 10, 2 to 10 VDC or 4 to 20 mA with the addition of a 500 ohm resistor (included)
- Direct/reverse action switch selectable
- Linear force: 90 lbf (400N), 180 lbf (800N), 337 lbf (1500N)
- Die-cast housing with plenum-rated plastic cover for NEMA 2 (IP54 vertical mount only) applications
- Manual override to allow positioning of valve
- Electronic valve sequencing and electronic flow curve (equal percentage or linear) selection
- Torque Overload protection throughout stroke
- Easy "One Touch" input signal/stroke calibration

SpaceLogic M900Axx-VB SR Actuators

Applications

Schneider Electric Spring Return and Non-Spring Return **SpaceLogic** M900AxxVB series linear actuators mount directly onto ½" ... 2" VB-7000 series and obsolete VB-9xxx ½" ... 1¼" 2-Way and 3-Way globe valve bodies. Applications include chilled or hot water and steam, NEMA 1 or 2 (M900Axx-VB) or NEMA 4 (M900AxW-VB) models. Field selectable input signals include reverse and direct acting, floating or proportional 0...1 Vdc, 2...10 Vdc or 4...20 mAac and proportional sequencing input signal ranges.

Valve and Actuator Selection Procedure

1. Determine the required flow coefficient (Cv/kvs).

Using the required flow and pressure drop for the application, determine the required flow coefficient (consult CA28, F-13755 if necessary).

2. Determine valve body part number.

Select a 2-Way valve body from section 1.0 VB-7000 Valve Bodies having the required flow coefficient, size, body pattern, end connection, and temperature/pressure ratings appropriate for the application. Determine the desired loss of power position of the valve (M900AR-VB Spring retract, M900AE-VB Spring extend).

3. Select the SmartX Actuator and appropriate spring-return action.

Using the required close-off pressure for the application and the appropriate spring-return action, select a **SpaceLogic** actuator having sufficient close-off pressure on the valve body selected in step 2. Additional **SpaceLogic** actuator specifications may be found in Actuators and Linkages.

4. Determine the Assembly Part Number

If a complete factory valve and actuator assembly is required, consult the actuator code of the **SpaceLogic** actuator selected in Step 3. For the complete assembly part number:

- Change the valve body part number prefix from VB to VU.
- Insert the actuator code in the third field of the part number.
- Confirm the factory assembly is available.

Example

- Valve Body: VB-7253-0-4-4
- Actuator: M900AR-VB
- Complete Assembly: VU-7253-650-4-4

(Note: Not available as a factory assembly, order the valve body and actuator for field assembly.)

SpaceLogic actuators are field configured for the desired control signal type and range plus the desired action. Consult the appropriate **SpaceLogic** Installation Instructions for further information.

SpaceLogic M900Axx(-VB) SR & VB-7000 Valve Selection

Not all valve body and actuator combinations are available factory-assembled. Some combinations must be field-assembled. Select a Valve Actuator combination having sufficient close off for the application.

MA-52xx Hydraulic 2-Position SR Actuators

Application
These MA-52xx Series Actuators are used for two-position control of valves that require a return to the normal position upon power interruption.

- Features**
- Two-position actuators controlled by SPST controller
 - Spring return
 - 24 Vac and 120 Vac models are available
 - An actuator with the part number suffix "-500" has a built-in, adjustable, SPDT Auxiliary switch
 - Die cast lower housing with ½" conduit opening and painted steel upper housing
 - Hydraulic actuator with oil-immersed motor and pump

AV-7600-1	Linkage ½" to 2" to be used with VB-7000.

Typical Wiring for MA-5xxx Series Actuators

Application

The AV-7600-1 Linkage kit is used to field assemble MA-521x, MP-521x, MP-541x and MP-561x round hydraulic actuators to ½" through 2" VB-7000 series valve bodies.

Features

- Provides direct-couple interface between MA, MP and MPR-5xxx actuators and valve bodies
- Fits all VB-7000 series valve bodies
- Includes spring choices for higher 2-Way valve close off

Specifications

- Actuator mounting: In any upright position above the center line of the valve body. For steam applications only, mount the actuator above the valve body at 45° from vertical.

MP-52xx Hydraulic Proportional SR Actuators

Application

These MP-52xx Series actuators provide electronic proportional control of valves requiring the return to normal position upon power interruption.

Features

- Compatibility with 2 to 15 VDC System 8000 Input signals
- Proportional control by variable VDC Input signal
- Spring return
- Fixed 3 VDC operating span
- Non-adjustable start point and non-positive positioning. Typically, one actuator is controlled from one VDC output signal
- 10,000 Ω or greater input impedance
- 24 and 120 Vac models
- Die cast lower housing with ½" (12.7 mm) conduit opening and painted steel upper housing
- Hydraulic actuator with oil-immersed motor, transducer, and pump

Specifications

Inputs	
Compatible with	2 to 15 VDC from System 8000 controllers Operating Span: Approx. 3 VDC fixed. See F-26235-2 for valves. Impedance: 10,000 Ω or greater.
Power input	Refer to Model table.
Connections	Color-coded 4 ft. (1.2 m) leads.
Outputs	
Electrical	Auxiliary switch (Mx-52xx-500 models), 10 Amps, 120/240 Vac adjustable SPDT, factory set to close the N.C. contact at the retracted end of stroke.
Mechanical	Stroke, Valve: Approximately 9/16" (14.3 mm) over a nominal 6 VDC (fully retracted) to 9 VDC (fully extended).
Environment	
Temperature limits	Shipping & Storage, -40 to 140° F (-40 to 61° C) For valve actuators: Refer to Pg. 25, 2. VB-7000 Series Globe Valves and Sizing and Selection
Humidity	5 to 95% RH, non-condensing
Location	NEMA Type 1
Dimensions	6¾ x 3¼ Dia." (171 x 83 mm)
Regulatory compliance	RoHS and REACH

Linkages	
AV-601	Linkage extension for hot water and steam applications; use with AV-7600.
AV-7600-1	Linkage for VB-7000.

Application

The AV-7600-1 Linkage kit is used to field assemble MA-521x, MP-521x, MP-541x and MP-561x round hydraulic actuators to ½” through 2” VB-7000 series valve bodies.

Features

- Provides direct-couple interface between MA, MP and MPR-5xxx actuators and valve bodies
- Fits all VB-7000 series valve bodies
- Includes spring choices for higher 2-Way valve close off

Specifications

- Actuator mounting: In any upright position above the center line of the valve body. For steam applications only, mount the actuator above the valve body at 45° from vertical.

MP-541x Hydraulic Proportional SR Actuators

Application

These MP-54xx Series actuators provide electronic proportional control of valves requiring the return to normal position upon power interruption.

Features

- Proportional control by variable VDC input signal
- Compatibility with 2 to 15 VDC System 8000 input signals
- Spring return
- Fixed 3 VDC operating span.
- Adjustable 2 to 12 VDC start point for paralleling or sequencing of actuators
- 10,000 Ω or greater input impedance
- 24 and 120 Vac models
- Damper models with linkage or base models that require separate damper or Linkage
- Die cast lower housing with 1/2" conduit opening and painted steel upper housing
- Hydraulic actuator with oil immersed motor, transducer, and pump

These MPR-561x Series actuators provide electronic proportional control of valves requiring return to normal position upon power interruption. They are compatible with controllers generating 4 to 20 mA input signals.

Features

- Spring return
- 24 and 120 Vac models available
- Die cast lower housing with ½" conduit opening and painted steel upper housing
- Hydraulic actuator with oil-immersed motor, transducer, and pump
- Proportional actuators controlled by a variable mAdc Input signal.
- 82.5 Ω input impedance
- Adjustable actuator startpoint

Optional accessories

Linkages	
AV-601	Linkage extension for hot water and steam applications; use with AV-7600.
AV-7600-1	Linkage for VB-7000.

Application

The AM-708 500 ohm resistor converts a 4 to 20 mA signal to a 2 to 10 VDC signal.

Specifications

- Actuators: MS40-7043, MS41-7073, MS41-7153, MS40-717x, MS41-6083, MS41-6153 and MS41-6343.
- Wire leads.

Application

The AV-7600-1 Linkage kit is used to field assemble MA-521x, MP-521x, MP-541x and MP-561x round hydraulic actuators to ½” through 2” VB-7000 series valve bodies.

Features

AV-601 Extension for MA, MP 5x1x-xxx, MPR-5x1x, MP-541x

Application

The AV-601 linkage extension kit is used to increase the allowable ambient temperature range of MA, MP-5x1x-xxx, MPR-5x1x and MP-541x Series actuators. The MP-541x and MPR-5x1x Series of actuators require the AV-601 extension. This kit provides thermal insulation between the valve and the actuator. It does not insulate the actuator from radiant or convective heat transfer.

Specifications

- Kit consists of an extension coupling and a spacer.
- Dimensions: Add 2-1/32" (52 mm) to the "E" dimension for the valve assembly using an AV-601 linkage extension. Refer to complete dimensions in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

AV-601 Linkage Extension for Electric/Electronic Hydraulic Valve Actuators

MK-2690 Pneumatic Valve Actuator - Proportional

Application

The MK-2690 provides proportional pneumatic control of ½" to 2" VB-7000 Series valves (subject to close-off ratings) and discontinued ½" to 1¼" VB-9xxx valves.

Features

- Compact size with 6 in² (39 cm²) effective area
- Rugged die cast aluminum housing
- Replaceable beaded, molded, neoprene diaphragm

AV-7400 Pneumatic Actuator Linkage Kit

Application

The AV-7400 Linkage Kit is used to field install MK-2690 pneumatic actuators to a variety of ½” to 2” VB-7000 series valve bodies.

Features

- Springs are provided for control-signal applications, including 3 to 7, 5 to 10 and 8 to 12 psig.
- Kit fits all VB-7000 series valve bodies.
- Blue spring used with AV-7600-1 supports hydraulic 4 to 20 mA and 0 to 10 VDC applications.

Specifications

- Actuator mounting: In any upright position with actuator above the center line of the valve body.

MK-46xx Pneumatic Actuator - Proportional

Application

The MK-46xx Series and MK-4621-422 proportional pneumatic actuators, with 11 sq. in. (71 cm²) effective diaphragm area, are used to control ½" to 2" VB-7000 series valves.

Features

- Rugged die cast aluminum construction
- Rolling diaphragm
- Multiple spring ranges for various applications
- Adjustable start point (refer to Specifications)
- ½" Nominal stroke
- Can also be used on ½" stroke discontinued VB-9xxx series valves (½" to 1¼").

Application

MK-66xx proportional pneumatic actuators, with 50 sq. in. (323 cm2) effective diaphragm area, are used to control 1½" to 2" VB-7000 series valves.

Features

- Rugged die cast aluminum construction
- Rolling diaphragm
- Three spring ranges for various applications
- Start point adjustable ±2 psi

AK-42309-500 Positive Positioning Relay

Application

Positive Positioner Pneumatic Relay is used to accurately position an actuator stroke with respect to signal pressure from the controller. It can also be used to change the effective spring range of an actuator and increase the capacity of a controller.

Features

For accurate positioning of valve and Damper Actuators, this positioner utilizes a pilot-operated, relay-type position-sensing mechanism, much more sensitive to actuator position changes than some competitive“force-balance” positioners.

Model Number	Description
AK-42309-500	Positive Positioning Relay with Mounting Linkage.

Note: This model cannot be used with M556, M572, M573, M574 Series actuators. Use N800-0555 positioner with M556, M573, and M574.

Specifications	
Action	Direct (increase in output pressure to actuator with an increase in pilot pressure from controller)
Pilot input	0 to main air pressure, psig.
Output	0 to main air pressure, psig.
Construction	
Housing	Polysulfone
Diaphragm	Neoprene
Start point	Adjustable 1 to 12 psig (7 to 83 kPa)
Span	Adjustable 2 to 13 psi (14 to 90 kPa); factory set at 5 psig.
Stroke	Adjustable 2 to 13 psi (14 to 90 kPa); factory set at 5 psig with feedback spring for 7/16 to 5" stroke.
Supply air pressure	Clean, oil free, dry air required (refer to EN-123).
Maximum	30 psig (207 kPa).
Nominal supply	15 to 20 psig (103 to 138 kPa)
Environment	
Ambient temperature limits	Shipping: -40 to 160°F (-40 to 71°C). Operating: 32 to 140°F (0 to 60°C).
Humidity	5 to 95% R.H., non-condensing.
Locations	NEMA Type 1 (IP10).
Air connection code	Refer to Figure 1
Air connections	
"M" and "B"	Barbed for 1/4" O.D. plastic tubing
"P"	Dual-contoured for 1/4" O.D. and 5/32" O.D. tubing
Air consumption for sizing air compressor	19 scim (5.2 mL/s) at 20 psig (138 kPa) supply
Air capacity for sizing air mains	20 scim (5.5 mL/s).
Flow capacity	860 scim (235 mL/s) at 20 psig (138 kPa) supply
Mounting linkage	All necessary linkage provided to assemble AK-42309-500 to MK-2690 actuator and the following actuator series; MK-3000, MK-4400, MK-4600, MK-4700, MK-4800, MK-6600, MK-6800, MK-6900, MK-7100, MK-8800 and MK-8900.
Dimensions	2½ H x 4½ W x 3 D" (64 x 114 x 76 mm).

a - VB-8303 valves may be used as mixing or diverting valves. VB-8303 valves will also operate sufficiently as 2-Way angle valves if either end (side) port is closed off.
b - Freeze protection required for temperatures below 32°F (0 °C). Avoid ice formation on stems.
c - Valve port in closed position. See Specifications in following pages for maximum allowable VB-8xxx differential pressure for valve in any open position.
d - Mixing configuration, ports A and B are inlets, port AB is outlet (located on bottom).
e - Diverting configuration, port AB is inlet, ports A and B are outlets. Port AB located on bottom.
f - Diverting configuration, flow AB to A ports.
g - Diverting configuration, flow AB to B ports.
h - All Diverting flow configurations, flow AB to either A or B ports.

Application

VB-9313 Series 3-Way Valves control hot or chilled water in heating or air conditioning systems. These valves must be piped with two inlets (“A” and “B” ports) and one outlet (“AB” port). They are used for two-position or proportional control applications. Valve assemblies require an actuator and a linkage that may be factory or field assembled.

Features

- Valve sizes 2½” to 6”
- 125 psig pressure rating per ANSI Standards (B16.1–1993) for flanged cast iron bodies
- Spring-loaded TFE & EPDM packing

VB-93xx 3-Way Flow Pattern

3-Way Valve sizing for water

Sizing for water

Two-position

Two-position control valves are normally selected by “line size” to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of available pressure (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional and floating

Proportional and floating control valves are usually selected to take a pressure drop equal to at least 50% of the available pressure. As available pressure is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results.

Conventional heating system pressure drops

Design temperature load drop °F (°C)	Recommended pressure drop (% of available pressure)	Multiplier on load drop
60 (33) or more	50%	1x load drop
40 (22)	66%	2x load drop
20 (11)	75%	3x load drop

Reducer affects

On full flow bodies, offset the affects of directly connected reducer(s) by choosing flow coefficients 6% or more higher.

Cv (flow coefficient) determination

The valves’ water capacity is based on the following formula:

$$C_v = \frac{GPM}{\sqrt{\Delta P}} \text{ or } C_v = GPM \sqrt{\frac{\text{Specific Gravity}}{\Delta P}}$$

Where:

Cv = Coefficient of flow

Cv is defined as the flow in GPM with ΔP = 1 psi with the valve completely open

GPM = U.S. gallons per minute (60°F, 15.6°C)

ΔP = Differential pressure in psi (pressure drop)

Proportional 3-way valves

Recommended pressure drop

Bypass application

50% of available pressure, or equal to pressure drop through the load at full flow.

3-Way valves in the return used to control output by throttling water flow to the load (bypass applications) are controlling output in the same manner as throttling 2-Way valves, and must be selected using the same high pressure drops if good control results are to be obtained.

Constant flow applications

20% of available pressure, or equal to 1/4 of the pressure drop through the load at full flow.

3-way valves used with individual pumps to control output by varying water temperature to the load (constant flow applications) are controlling output by mixing two water sources at different temperatures and do not require high pressure drops for good control results.

Water capacity graph instructions

To select the appropriate valve Cv from the graph:

1. Select the required flow from the “Flow in GPM” axis.
2. Select available pressure drop from the “Pressure Drop in psi” axis.
3. Select the appropriate line and follow to the Capacity Cv (Kv) listing and choose the closest valve Cv flow coefficient.
4. Confirm the selection by calculation from the water equations.

VB-8xx3 Valve body characteristics

System design considerations

Note: The information in this section describes characteristics of the VB-8xx3 valve bodies, which are used in the Vx-8xx3 valve assemblies.
Control precision

2-way valves:

The flow curve shown below is representative of all sizes. All valve plugs have lower gain when nearly closed to enhance control at low demand. 2-way valves are nominally equal percentage and normally used for water and low pressure steam.

Temperature/pressure ratings

Temperature and pressure ratings of 2-way and 3-way valves are shown below. Ratings conform with published values and disclaimer.

3-way valves:

3-way valves are designed so that the flow from either of the inlet ports to the outlet is nominally linear, which means the total flow from the outlet is almost constant over the stroke of the valve stem. The flow is limited at the initial opening similar to an equal percentage curve to enhance system stability. Typical flow characteristics of the VB-8303 series valve bodies are shown below.

Rangeability

Rangeability is the ratio of rated flow to the minimum controllable flow through a valve. The nominal rangeability of the VB-8xx3 Series is greater than 100:1.

VB-8xx3-0-5-P (Cast Iron Body with Flanged End Fittings)

Standards: Pressure to ANSI B16.1, Class 125, with 200 psi (1379 kPa) up to 150 °F (65 °C), decreasing to 169 psi (1165 kPa) at 281°F (138 °C)

Materials: Valve body: Cast iron, ASTM A126 Class B

Trim: Stainless steel stem, forged brass plug, metal-to-metal or EPDM seat ring with TFE/EPDM packing parts and silicone packing grease.

Close-off ratings

Nominal actuator close-off ratings are based on ANSI IV (0.01% leakage) for valves with EPDM seat rings such as VB-8213 and VB-8223.

Metal-to-metal trim valves such as VB-8303 are designed for ANSI III (0.1% leakage).

VB-82x3 water flow coefficient and capacity

Water flow coefficient (Cv)

Sizing a valve requires selecting a flow coefficient (Cv), which is defined as the flow rate in gallons per minute (gpm) of 60°F water that will pass through the fully open valve with a 1 psi pressure drop (ΔP). It is calculated according to the formulas shown in Cv Equation for Water and Cv Equation for Steam. Since the flow rate through the heat exchanger is usually specified, the only variable normally available in sizing a valve is the pressure drop. The following information can be used to determine what pressure drop to use in calculating a valve Cv. Using the calculated Cv, consult the water capacity table on this page or steam capacity to select the valve body with the nearest available Cv.

Caution: Be sure that the anticipated pressure drop across the valve will not exceed the close-off pressure rating and the maximum pressure differential rating listed in the Vx-8xxx Selection Guide, F-27199.

Two-position

Two-position control valves are normally selected by "line size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of available pressure (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional

Proportional control valves are usually selected to take a pressure drop equal to at least 50% of the available pressure. As available pressure is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results (see the conventional heating system table below).

Conventional heating system pressure drops

Design temperature load drop °F (°C)	Recommended pressure drop (% of available pressure)	Multiplier on load drop
60 (33) or More	50%	1 x load drop
40 (22)	66%	2 x load drop
20 (11)	75%	3 x load drop

Secondary circuits with small booster pumps: 50% of available pressure difference (equal to the drop through load, or 50% of booster pump head).

VB-82x3 steam capacity and vapor pressures

Steam

Two-position

Two-position zone valves and direct radiation valves are normally sized using a minimum of 10% of inlet pressure (psig).

Proportional

Proportional control valves are normally sized as follows:

For low pressure (15 psig or less), use ΔP of 80% of gauge inlet pressure.

For steam pressures greater than 15 psig, use ΔP of 42% of absolute (gauge plus 14.7) inlet pressure.

When the Cv required is between two valve sizes, select the larger size. Do not size steam valves using a pressure drop greater than 42% of the absolute inlet pressure.

$$C_v = \frac{Q \times K}{3\sqrt{\Delta P \times P_2}} \quad Q = \frac{3C_v\sqrt{\Delta P \times P_2}}{K}$$

Where:

Cv = Coefficient of flow

Q = Flow rate of steam that will pass through fully open valve, measured as pounds per hour of steam

ΔP = Differential pressure (pressure drop), measured in psi

P2 = Outlet pressure, measured in psia (absolute pressure). P2 = Inlet pressure + 14.7 – ΔP

K = 1 + (0.0007 x °F superheat). K = 1 for saturated steam

VB-82x3 steam capacity and vapor pressures

Cavitation limitations on valve pressure drop

A valve selected with too high a pressure drop can cause erosion of discs and/or wire drawing of the seat. In addition, cavitation can cause noise, damage to the valve trim (and possibly the body), and choke the flow through the valve.

Do not exceed the maximum differential pressure (pressure drop) for the valve selected.

The following formula can be used on higher-temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:

$$P_m = 0.5 (P_1 - P_v)$$

Where:

P_m = Maximum allowable pressure drop

P₁ = Absolute inlet pressure (psia)

P_v = Absolute vapor pressure (psia)

Note: Add 14.7 psi to the gauge supply pressure to obtain the absolute pressure value.

For example, if a valve is controlling 200°F water at an inlet pressure of 18 psig, the maximum pressure drop allowable would be:

$$P_m = 0.5 [(18 + 14.7) - 11.53] = 10.6 \text{ psi (Vapor pressure of 200°F water is 11.53 psi.)}$$

Therefore, if the pressure drop for this valve is less than 10.6 psi, cavitation should not be a problem.

Systems where cavitation is shown to be a problem can sometimes be redesigned to provide lower inlet velocities. Valves having harder seat materials should be furnished if inlet velocities cannot be lowered.

For additional valve sizing information, see the Vx-8xxx Selection Guide, F-27199.

VB-9313 Valve body characteristics

Flow characteristics

3-way valves are designed so that the flow from either of the inlet ports to the outlet is approximately linear, which means the total flow from the outlet is almost constant over the stroke of the valve stem. Typical flow characteristics of VB-9313 series valve bodies are shown below.

Typical flow characteristics

Rangeability

Rangeability is the ratio of rated flow to the minimum controllable flow through a valve. For mixing valves, control begins as soon as plug displacement allows flow. Thus, 3-way valve rangeability normally exceeds 500:1, which is the reciprocal of 0.2% nominal leakage.

Water

Two-position

Two-position control valves are normally selected "line size" to keep pressure drop at a minimum. If it is desirable to reduce the valve below line size, then 10% of available pressure (that is, the pump pressure differential available between supply and return mains with design flow at the valve location) is normally used to select the valve.

Proportional to bypass flow

Proportional mixing valves used to bypass flow are piped on the outlet side of the load to throttle the water flow through the load and therefore control heat output of the load. These valves are usually selected to take a pressure drop equal to at least 50% of the available pressure. As available pressure is often difficult to calculate, the normal procedure is to select the valve using a pressure drop at least equal to the drop in the coil or other load being controlled (except where small booster pumps are used) with a minimum recommended pressure drop of 5 psi (34 kPa). When the design temperature drop is less than 60°F (33°C) for conventional heating systems, higher pressure drops across the valve are needed for good results (see conventional heating system pressure drops table below).

Conventional heating system pressure drops

60 (33) or more	50%	1 x load drop
40 (22)	66%	2 x load drop
20 (11)	75%	3 x load drop

* Recommended minimum pressure drop = 5 psi (34 kPa).

Secondary circuits with small booster pumps: 13 50% of available pressure difference (equal to the drop through load, or 50% of booster pump head).

Proportional to blend water flows

Proportional valves used to blend two water flows control the heat output by varying the water temperature to the load at constant flow. These valves do not require high pressure drops for good control results. They can be sized for a pressure drop of 20% of the available pressure or equal to 25% of the pressure drop through the load at full flow.

Cv equation

Where:

Cv = Coefficient of flow

GPM = U.S. gallons per minute (60°F, 15.6°C)

ΔP = Differential pressure in psi (pressure drop)

$$Cv = \frac{GPM}{\sqrt{\Delta P}}$$

$$\Delta P = \left(\frac{GPM}{Cv} \right)^2$$

$$GPM = Cv \sqrt{\Delta P}$$

Cavitation limitations on valve pressure drop

A valve selected with too high a pressure drop can cause erosion of discs and/or wire drawing of the seat. In addition, cavitation can cause noise, damage to the valve trim (and possibly the body), and choke the flow through the valve.

Do not exceed the maximum differential pressure (pressure drop) for the valve selected.

The following formula can be used on higher-temperature water systems, where cavitation could be a problem, to estimate the maximum allowable pressure drop across the valve:

$$P_m = 0.5 (P_1 - P_v)$$

Where:

P_m = Maximum allowable pressure drop

P₁ = Absolute inlet pressure (psia)

P_v = Absolute vapor pressure (psia) (Refer to the table below.)

Note: Add 14.7 psi to the gauge supply pressure to obtain the absolute pressure value.

For example, if a valve is controlling 200°F water at an inlet pressure of 18 psig, the maximum pressure drop allowable would be:

$$P_m = 0.5 [(18 + 14.7) - 11.53] = 10.6 \text{ psi (Vapor pressure of 200°F water is 11.53 psi.)}$$

Therefore, if the pressure drop for this valve is less than 10.6 psi, cavitation should not be a problem.

Systems where cavitation is shown to be a problem can sometimes be redesigned to provide lower inlet velocities. Valves having harder seat materials should be furnished if inlet velocities cannot be lowered.

Overview VB-8/9000 Series Actuator Assemblies

Vx-8xx3 Series Balanced Globe Valve Assemblies

Schneider Electric VA, VF, VK, VK4, VS and VU-8xx3-xxx-5-P series valve assemblies are complete actuator/valve assemblies that accept Two-position, floating, and proportional electric/electronic and proportional pneumatic Control signals, for control of chilled water, hot water, or low pressure steam. These valve assemblies consist of pneumatic, electric, or electronic valve actuators either direct-coupled or linked to a 2½" to 6" 2-Way or 3-Way valve body with ASA flanged end connections.

VB-8xx3 Series Valve Bodies

VB-8xx3-0-5-P Valve Bodies are also available separately to allow field mounting of a variety of Forta, Schneider Electric SmartX, or pneumatic actuators using the appropriate linkage.

Features

- Balanced plug design provides high close-offs using economical actuation
- Up to 125 psi (856 kPa) close-off on 2-Way models, 35 psi (240 kPa) on 3-Way models
- Universal 3-Way valve can be piped in either mixing or diverting configurations.
- Valve sizes 2½" to 6", ASA 125 flanged
- A variety of Forta, Schneider Electric SmartX and pneumatic actuators are available, either as factory assemblies or for field assembly.
- ANSI IV shutoff (0.01% of Cv) on 2-way models, ANSI III (0.1% of Cv) on 3-way models
- Self-adjusting spring loaded TFE/EPDM packing
- Normally open, normally closed, and non-spring return models available
- Expanded temperature range of 20° to 281°F
- ISO 9001:2000 Certified Quality Management System
- Vx-9313 3-Way valves offer many of the same features as the VB-8xx3 vales and a conventional mixing valve flow pattern.

VB-8000, VB-9000 Assembly selection procedure

Globe Valve Assembly selection procedure

When selecting a globe valve assembly, you must determine the applicable codes for the Control signal type, valve body configuration, end connection, port size and actuator. Select a globe valve assembly part number as follows:

1. Control signal type, valve body configuration and end connection

Refer to Pg. 111, Ordering VB-8000, VB-9000 Valve Assemblies and select the appropriate codes for the part-number fields.

2. Valve size (flow coefficient)

If the required flow coefficient (Cv) has not been determined, do so as follows:

- a. Refer to Sizing and Selection to calculate the required Cv.
- b. Select the nearest available Cv value and corresponding valve body port code.

3. Actuator and linkages

Select the appropriate actuator and code, according to Assembly Ordering based on the Control signal type, required valve normal position, and voltage requirements. For detailed actuator information, refer to the applicable actuator specifications on subsequent pages.

Note: Linkages shown in Specification tables are supplied with the actuator. When shown in Optional Accessories the linkage must be ordered separately.

4. Close-off pressure

Confirm that the selected actuator and valve body combination provides sufficient close-off pressure. If no close-off pressure is shown, the valve body/actuator combination is not valid.

5. Available space

If available space is a consideration, check the appropriate dimensions in the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center.

Specify four part number fields

(1, 2, 4, and 6 below) to determine the Valve Actuator Assembly part number.

1) Control Signal

V□□

Refer to the guide below.

2) Trim and Valve Configuration

— □□□

3) Pipe End Connections

3 —

Flanged for all valves.

4) Actuator or Linkage

□□□

Refer to the following pages for Spring & Non-Spring Return Electric and Pneumatic Spring Return Actuator codes, based on required close-off pressure.

5) Pattern Code

— 5 —

Specify Option 5 (Flanged) for all valves.

6) Port Code Cv Value

□□

For water, steam, glycol and similar non flammable, non toxic fluids, choose based on capacity sizing in this chapter. Below 2½", go to Pg. 25, 2. VB-7000 Series Globe Valves and Sizing and Selection .

a - Spring range field adjustable with Positive Positioner.

b - AK-42309-500 Positive Positioner optional for 2½" to 5" valve, required for 6" valve. Supplied as standard on VK4 factory valve assemblies. See Pg. 111, VB-8000, VB-9000 Assembly Selection Procedure for the relevant part series to determine a specific part number.

c - $C_v = \frac{gpm}{\Delta P}$ (where ΔP is measured in psi) $kvs = Cv / 1.156$ $K_{vs} = \frac{m^3/h}{\Delta P}$ (where ΔP is measured in bar; 1 bar = 100 kPa).

d - Maximum allowable differential across the valve in any open position. Less than 20 psi recommended for quieter service. Consult close-off pressure ratings.

a - Close-off ratings for mixing valves: (SU = "A", SD = "B" port). "A" port (SU) ratings equal pressure at port "A" minus pressure at port "B". "B" port (SD) ratings equal pressure at port "B" minus pressure at port "A". Close-off ratings in the table are true only when the indicated supply air pressure is applied to the actuator. A change in air pressure at the actuator alters the actual close-off pressure.
b - Close-off pressure ratings describe only the differential pressure which the actuator can close-off to standards with adequate seating force. Consult valve body specifications for other limitations.
c - SU - Stem Up; SD - Stem Down. For piping information refer to the separately available Wiring, Dimensions and Reference document F-28125 from the Exchange Download Center for flow pattern.
d - Factory valve assemblies are available only with Positive Positioner.
e - Includes AV-496 linkage.
f - Includes AV-495 linkage.

SpaceLogic M900A Series Spring Return Actuators

Product Description

The M900A series is a linear electro-mechanical actuator with “fail-safe” spring return operation for the control of two-way and three-way globe valves in:

- Hot water and steam systems
- Heating and cooling systems
- Air handling systems

M900A series utilize brushless DC motors and a high resolution control board to provide a very precise fluid control in globe valves. The actuator’s input signal range and optional auxiliary switches of the actuator are adjusted automatically to the stroke of the valve.

The actuator automatically provides a consistent running time regardless of the valve stroke.

On power loss, the mechanical spring return mechanism drives the motor in turn, generating power to the board to control the spring return braking speed, avoiding mechanical stress and system water hammer. All actuators can be configured for either a 3-wire floating signal or various modulating control signals including sequencing.

Pneumatic Positive Positioning Relay for VB-7/8/9xxx

Positive Positioning Relay

Positive Positioner Pneumatic Relay is used to accurately position an actuator stroke with respect to signal pressure from the controller. It can also be used to change the effective spring range of an actuator and increase the capacity of a controller.

Features

For accurate positioning of valve and Damper Actuators, this positioner utilizes a pilot-operated, relay-type position-sensing mechanism, much more sensitive to actuator position changes than some competitive "force-balance" positioners.

Model Number	Description
AK-42309-500	Positive Positioning Relay with Mounting Linkage.

Note: This model cannot be used with M556, M572, M573, M574, and MK-12000 Series actuators. Use N800-0555 positioner with M556, M573, and M574.

Specifications

Action	Direct (increase in output pressure to actuator with an increase in pilot pressure from controller)
Pilot input	0 to main air pressure, psig.
Output	0 to main air pressure, psig.
Construction	
Housing	Polysulfone
Diaphragm	Neoprene
Start point	Adjustable 1 to 12 psig (7 to 83 kPa).
Span	Adjustable 2 to 13 psi (14 to 90 kPa); factory set: 5 psig
Stroke	Adjustable 2 to 13 psi (14 to 90 kPa); factory set: 5 psig with feedback spring for 7/16 to 5" stroke
Supply air pressure	Clean, oil free, dry air required (refer to EN-123)

Rack & Pinion Linkages AV-607/609-1

Application

The AV-607-1 and AV-609-1 linkages are designed to link single or dual Schneider Electric SmartX spring return and non-spring return actuators to 1½" to 6" VB-9313 and 2½" to 6" VB-8xx3 globe valves.

Features

- Allows mounting of single or dual actuators Schneider Electric SmartX actuators
 - AV-607-1 is compatible with Schneider Electric (Siebe, Barber-Colman, INVENSYS) 2½" to 5" VB-8xx3, 2½" to 4" VB-9313 and discontinued 2" to 4" VB-9xxx valves and Schneider Electric SmartX actuators 2
 - AV-609-1 is compatible with Schneider Electric (Siebe, Barber-Colman, INVENSYS) 6" VB-8xx3, 5" to 6" VB-9313 and 5" and 6" VB-92xx valves and Schneider Electric SmartX actuators 2
 - Maintenance-free construction
 - Corrosion protected heavy-duty steel rack-and-pinion construction and metal housing
 - Precision rack self aligns with the valve stem
- 2 - Check the appropriate valve selection guide for close-offs for your application. AV-607-1 and AV-609-1 replace AV-607 and AV-609 respectively

Pressure Independent Balancing and Control Valves and Actuators

Description and features

The SpaceLogic PIBCV range is a comprehensive selection of automatic balancing and control valves that provide flow limitation, with full control authority over hydronic regulation.

Automatic balancing within PIBCV valves provide stable flow regulation regardless of pressure fluctuations in the system and all valves have an adjustable flow limitation set point. The control valve portion of the PIBCV further regulates the water/ glycol flow from close-off up to the maximum flow limit setting.

Typical applications are temperature control of chillers, air- handling units, heat exchanges and terminal units such as fan coils, induction units and radiant panels.

Features

- Reduced Energy Consumption
 - Pressure independence ensures no overflow of water/ glycol through the valve. Limiting water/ glycol flow to the design load of the coil has a significant effect on energy efficiency since systems operate for the majority of the time on a partial load.
 - The overflow of water/glycol causes a degradation in heat transfer at the heat exchanger.
 - Uncontrolled overflow of water/glycol beyond the design flow of the heat exchanger is an extremely wasteful and inefficient use of heat.
 - The correct and maximum design flow ensures a high differential in supply and return temperatures to provide high operational efficiency of the chiller or boiler.
- Improved Comfort
 - The SpaceLogic PIBCV valves are not affected by other valves in the system that may be opening and closing throughout the day or other piping system disturbances providing more constant, comfortable, room temperatures.
- Reduced Pumping Costs
 - A reduction in overflows through the network reduces pumping costs. A smaller pump head and equipment is required compared to traditional configurations.
- Reduced Installation Costs
 - Only one valve needs to be installed rather than two or three since the SpaceLogic PIBCV covers the pressure balancing, flow limitation and control modulation.
- Easy and Quick Commissioning
 - SpaceLogic PIBCV setup time is significantly reduced with a simple and accurate flow setting procedure without the need for flow charts, calculations or measuring equipment.
- Improved Reliability
 - Improved mechanical equipment reliability from reduced actuator movements.

actuators are  

Summary and applications

Summary

SpaceLogic PIBCV valves and Actuators can be used with actuators for pressure independent balancing and control applications or without actuators for automatic flow limiting balance applications. PIBCVs immediately react to all changes in system pressures, providing stable valve control independent from the fluctuating pressures in the piping system. No valve authority, pressure calculations or complicated valve flow setting calculations are required. At partial system load there is no resulting overflow because the valve always limits the flow corresponding to the design flow of the coil.

SpaceLogic PIBCV valves with actuators include an integrated control valve with flow regulation for HVAC applications, plus an automatic flow limiting function for energy efficiency. A full range of Schneider Electric actuators are available for every control application including two position, proportional, floating, spring return open, spring return close, and non-spring return.

Applications

Variable flow systems: A SpaceLogic PIBCV with a Schneider Electric actuator is used as a control valve for terminal units, like an AHU (Air Handling Unit), FCU (Fan Coil Unit) or radiation panel, and controls the required flow on every terminal unit maintaining hydronic balance in the system.

Constant flow systems: There are numerous applications in which SpaceLogic PIBCV can be used. In a constant flow system with FCUs or in a one pipe heating system, SpaceLogic PIBCVs can be installed as an automatic balancing valve in every riser. SpaceLogic PIBCVs limit the flow to the set value, thus automatically achieving hydronic balance. Whenever an automatic flow limiter or a control valve is needed, the advantages of cost-saving properties are inherent with SpaceLogic PIBCVs. This includes systems with (floor) heating/cooling, concrete core activation or radiation panels.

Theory and implementation

Theory

The SpaceLogic PIBCV valve consists of two parts:

1. Differential Pressure Controller
2. Control Valve

1. Differential Pressure Controller (PC)

The differential pressure controller maintains a constant differential pressure across the control valve. The pressure difference is balanced so that when the differential pressure across the control valve changes (due to a change in available pressure, or movement of the control valve) the pressure regulator automatically aligns to a new position. This brings a new equilibrium and therefore keeps the differential pressure at a constant level.

2. Control Valve (CV)

The control valve has a linear characteristic. It features a stroke limitation that allows adjustment of the value. The maximum flow allowed by the control valve can be adjustable to a percentage of the valve's maximum flow rate.

Control Performance

SpaceLogic PIBCV actuators can be used to change the flow response from linear to logarithmic (equal percentage). This makes the SpaceLogic PIBCV suitable for all applications, including AHUs, where the equal percentage characteristic is needed to get a stable control loop. The actuators can be switched from linear to equal percentage by changing a dipswitch setting.

Easy Implementation

- No Cv or authority calculations needed. Flow is the only parameter to be considered when designing.
- Compact design, essential when only limited space is available such as in fan-coil units.
- Easy commissioning and troubleshooting. No specialized staff or measuring equipment needed.
- Trouble-free segmentation of the building project. SpaceLogic PIBCVs will automatically control the flow, even when sections of the installation are unfinished. There is no requirement to re-adjust the SpaceLogic PIBCV flow setting after finalization of the building project.

Flow Direction

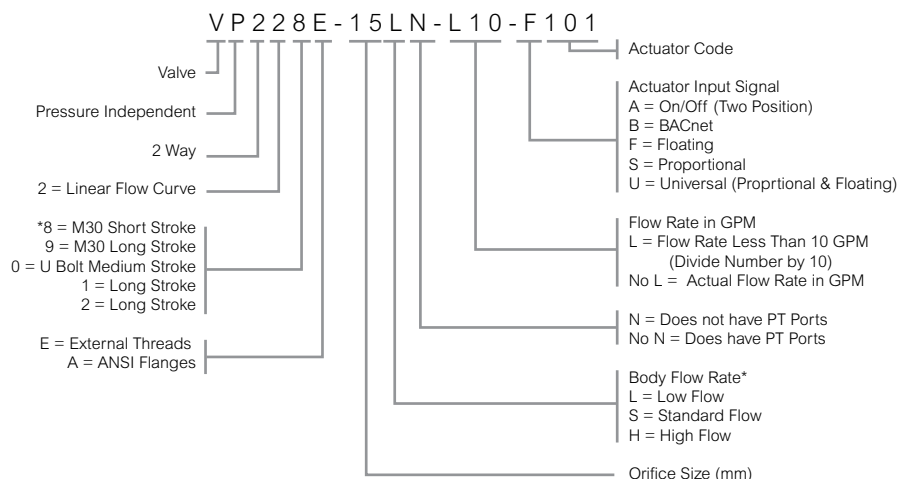

A SpaceLogic PIBCV valve is mono-directional, meaning the valve operates when the arrow on the valve body is aligned with the flow direction. When this rule is ignored, the valve acts as a variable orifice that causes water/glycol hammer at sudden closing when available pressure has increased, or the valve has been set to a lower value.

In the case when a system condition allows backflows, it is strongly recommended to use a backflow preventer in order to avoid possible water/glycol hammer that can damage the valve as well as other elements in the system.

It is recommended to fit a strainer upstream of the valve to increase reliability and to follow water/glycol treatment guidelines as detailed in VDI 2035. The pipework system should be flushed prior to the operation.

Valve assembly part number system

* Determined by valve size and flow; see tables 23 & 24

Methods of selection

SpaceLogic PIBCV selection options

There are three methods for selecting SpaceLogic PIBCV Valves and Actuators:

1. **Complete method: valve assembly selection**
2. **Custom method: valve body and actuator field assembly**
3. **Valve only method: automatic flow limited balance**

1: Complete method: valve assembly selection

To select a PIBCV valve assembly select the required flow rate and actuator type. For example, to select a PIBCV valve assembly with a flow rate of 1.5 GPM and a non-spring return proportional actuator refer to **Pg. 197, Table 1. Valve Assemblies ½ to 1¼" With Female NPT End Connectors, Without PT Ports**.

Select the 1.5 GPM flow rate with the left column of the table.

Select the actuator from the top row of the table.

The intersecting valve assembly part number from the left column and top row selections shows VP228E-15SN-L15-S101 which includes the set 1.5 GPM flow rate, installed actuator, female NPT end connectors, and metal tag with flow rate.

Specifications for the selected valve body actuators are in **"Table 3. Specification ½ to 1¼" Valve Body Actuators"** on page 263 and for the valve body in **Pg. 202, Table 12. Specification Threaded Version, ½ to 2"**.

2. Custom method: valve body and actuator field assembly

Select the individual parts then set the flow rate and field assemble a valve assembly.

Pg. 202, Table 12. Specification Threaded Version, ½ to 2" shows the valve body specifications and **Pg. 209, Table 23. ½ to 2" Valve Flow Ranges (Q_{min} to Q_{nom})**, and **Pg. 210, Table 24. 2½" to 10" Flanged Valve Flow Ranges (Q_{min} to Q_{nom})**, show the valve body flow rate ranges.

For example, to select a valve body that can be used in the flow rate range of 1 to 2 GPM, from **Pg. 205, Table 17. Selection: ½" to 2" Valve Body Tail Pieces**, select the VP-228E-15BQSNT valve body that does not include PT ports, or select the VP-228E-15BSQ valve body if PT Ports are required.

Other larger valves could also provide the 1 to 2 GPM flow rates, but the VP-228E-15BQSNT was selected because it will be using a higher percentage of its flow range (in general, best accuracy is achieved when a higher percentage of flow rate is used). The ½" to 2" PIBCV valves use convenient valve body tail pieces for connection to the piping system.

From Pg. 205, Table 17. Selection: ½" to 2" Valve Body Tail Pieces, select the desired ½" tail piece – part number 9112108015 for Female NPT, 9112110015 for Male NPT, or 9112109015 for Sweat. Each tail piece part number includes two tail pieces.

"Table 3. Specification ½ to 1¼" Valve Body Actuators" on page 263 shows the compatible actuators.

Select the MP131-24T for two-position control, the MP131-24F for floating control, the MP-131-24MP for proportional control, the MP300-SRU for spring return open universal control, or the MP300-SRD for spring return close universal control. Universal control actuators provide both proportional and floating input functionality. The valve body flow can easily be set before the actuator is installed as shown in the **Pg. 196, PIBCV Flow Setting**.

3. Valve Body Only: Automatic Flow Limited Balance Example

PIBCV valves can be used without actuators to limit the circuit flow to an adjustable flow rate.

Pg. 202, Table 12. Specification Threaded Version, ½ to 2" shows the valve body specifications and **Pg. 205, Table 17. Selection: ½" to 2" Valve Body Tail Pieces** and **Pg. 210, Table 24. 2½" to 10" Flanged Valve Flow Ranges (Q_{min} to Q_{nom})** show the valve body flow rate ranges.

For example, to select a valve body that can be used in the flow rate range of 2 to 5 GPM from Table 23 select the VP229E-15BQHNT Valve body part number. The ½" to 2" PIBCV valves use convenient valve body tail pieces for connection to the piping system.

From Pg. 205, Table 17. Selection: ½" to 2" Valve Body Tail Pieces, select the desired ½" tail piece: part number 9112108015 for Female NPT, 9112110015 for Male NPT, or 9112109015 for Sweat. Each tail piece part number includes two tail pieces.

The 1½" and larger sized valves require a stem lock when used without an actuator as shown in Pg. 201, Table 11. Application: Operation of PIBCV Valve Body Without Actuator (which also shows application information for the valve bodies without actuators). The valve body flow can easily be set as shown in the PIBCV Flow Setting section.

PIBCV Flow Setting

1/2...1 1/4" Size Valves

The calculated flow can be adjusted easily without using special tools. To change the presetting (factory setting is 100% for separately purchased PIBCV valve bodies) follow the four steps below:

- ❶ Remove the black protective cover or the mounted actuator.
- ❷ Raise the green pointer.
- ❸ Turn (clock wise to decrease) to the new presetting.
- ❹ Press the pointer back into the lock position. After the pointer is clicked back into place the presetting is locked.

The presetting scale indicates values from 100% flow to 20%. Clock wise turning would decrease the flow value while counter clock wise would increase it.

Example: VP229E-15HN

With this 1/2" valve the nom flow = 5 gal/min = 100% presetting.

To set a flow of 4 gal/min you have to set: $4/5 = 80\%$.

Schneider Electric recommends a presetting/flow from 20% to 100%.

To set a PIBCV valve to a Q_{high} setting above 100%, turn the green pointer counter clock wise from 100%. The Q_{high} setting is the scale setting plus 90%. For example, to set the VP229E-15HN to a flow rate of 5.5 gal/min, set $5.5/5.0 = 110\%$ setting. Obtain the 110% setting by turning the green pointer counter clock wise from 100% to 20% (20% and 90% = 110%). As shown on page 267, Q_{high} settings above 100% slightly increase the valve's required minimum differential pressure.

PIBCV Flow Setting 5" ...10"

Note:
1 turn = 5%

PIBCV Flow Setting 1 1/2" ...4"

Note: 1 turn = 10%

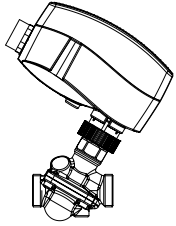

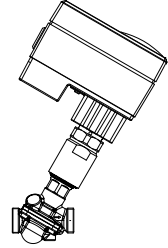

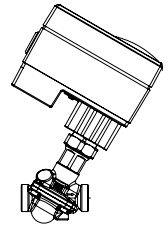

Max 25Nm

PIBCV Assemblies: ½" to 1¼" Female NPT, without PT Ports

Table 11. Application: Operation of PIBCV Valve Body Without Actuator

Operation of the PIBCV valve body without an actuator for an automatic flow limiting balancing application.

PIBCV Valve size	Valve body Series	Valve Stem Lock part number	Recommended installation and valve shut off capability
1/2" to 1-1/4"	VP228E-xxxxxxx, VP229E-xxxxxxx	Use black cap provided with VP228E-xxxxxxx or VP229E-xxxxxxx valve body	Install valve in the supply water pipe for best shut off valve performance. To shutoff valve tighten black cap (max. Close off pressure is 14.5 psi). To shut off against a higher differential pressure set the valve flow to 0%.
1-1/2", 2"	VP220E-xxxxx	9114070000 (not included with valve body)	Install valve in either the supply or return water pipe. To shut off valve tighten bottom knob (max. Close off pressure is 232 psi).
2-1/2" to 4"	VP220A-xxxxx		Install valve in either the supply or return water pipe. To shut off valve tighten bottom insert with a 8 mm allen wrench (max. Close off pressure is 232 psi).
5" to 6"	VP221A-xxxxxx	9114071000 (not included with valve body)	
8" to 10"	VP222A-xxxxx	9114072000 (not included with valve body)	No shut off knob, set the valve to a 0% flow setting to shut off flow.

The 9114070000, 9114071000, and 9114072000 Valve Stem Locks are secured to the valve body with a 10 mm allen wrench.

Specification Submittal Text

SpaceLogic PIBCV has the following specifications:

1. NPS 2 and Smaller: PN 16, stainless steel components.
2. NPS 2-1/2 through 10: Class 125 cast iron body per ASME B16.1-2010, Material class B per ASTM A 126-04 (2014), stainless steel components.
3. Accuracy NPS ¾ and Smaller: The control valves shall accurately control the flow from 0 to 100% rated flow with a differential pressure range of 2.32 to 58 psi for low and standard flow units, 5 to 58 psi for high flow units within 5% of set flow value.
4. Accuracy NPS 1 through 1-1/4: The control valves shall accurately control the flow from 0 to 100% rated flow with a differential pressure range of 2.9 to 58 psi for standard flow units, 5 to 58 psi for high flow units within 5% of set flow value.
5. Accuracy NPS 1-1/2 through 4: The control valves shall accurately control the flow from 0 to 100% rated flow with a differential pressure range of 4.35 to 58 psi for standard flow units, 8.7 to 58 psi for high flow units within 5% of set flow rate.
6. Accuracy NPS 5 through 10: The control valves shall accurately control the flow from 0 to 100% rated flow with a differential pressure range of 5.8 to 58 psi for standard flow units, 8.7 to 58 psi for high flow units within 5% of set flow value.
7. Flow Characteristics: Linear Control, selectable to equal percentage at the proportional valve actuator.
8. Field adjustable flow by means of a percentage of rated valve flow.
9. Position feedback output signal integrated into all proportional actuators.
10. 100% authority with modulating below 1% regardless of flow settings.
11. No cartridges requiring replacement or maintenance.
12. Close off ratings shall be 232 psi for all valve sizes.
13. Valve control range 1:1000.

MP131-24T, 24F, 24MP Floating and Proportional Actuators

MP131 actuators are used together with automatically balanced combination valve type SmartX PIBCV for 1/2" to 1-1/4". Typical applications are temperature control and permanent automatic balancing on terminal units (fan-coils, chilled ceilings, air-handling units).

Features

- Gap detection at stem up position
- 3 point version
- Force switch-off at stem down position prevents overload of actuator and valve
- No tools required for mounting
- Maintenance-free lifetime
- Low-noise operation

Dimensions (mm)

Mounting and Installation

The actuator should be mounted with the valve stem in either horizontal position or pointing upwards. The actuator is fixed to the valve body by means of a ribbed nut which requires no tools for mounting. The ribbed nut should be tightened by hand.

1. Check the valve neck. The actuator should be in stem up position (factory setting) and mounted securely on the valve body.
2. Wire the actuator according to the wiring diagram.
3. Stem movement is indicated by the Position Indicator (a small pin riding in a channel as shown in (1) below).

MP300-SRU/SRD Multi-Signal Actuators

MP300-SRU/SRD actuators with Floating and Proportional control are low voltage motoric actuators for the SmartX PIBCV DN10-32 (½”–1¼”) Valves. These actuators have a spring return safety function that provides for an open or close valve in the event of power loss. The Spring return safety function should not be used for two position control

Features

- The advanced design incorporates load related ‘switch- off’ to ensure that actuators and valves are not exposed to overload.
- The advanced design incorporates a diagnostic LED, operational data capture and self stroking feature.
- Low weight and robust.
- Spring Return operation in the event of power failure.

MP500C, MP500C-SRU/SRD Multi-Signal Actuators

MP500C are linear electro-mechanical actuators for use with VP220x SmartX PIBCV valves, DN40–100, controlled by either an increase/decrease floating signal or by a range of modulating control signals in the range 0–10V. SRU/SRD models have a spring return feature. The U-Bolt connection allows quick and easy direct mounting onto the SmartX PIBCV VP220 valves.

Features

- Brushless DC motor.
- High resolution control board allows precise fluid control.
- Working range and end point switches adjusted automatically to the stroke of the valve.
- When driven electrically, firmware calibrates a consistent running time regardless of the valve stroke.
- During power loss SRU/SRD spring return drives the motor, generating power to the board, controlling braking speed which avoids mechanical stress and system water hammer.
- Actuators can be configured for either 3 point increase/ decrease signal or various modulating control signals including sequencing.
- Stroke Indicators on the yoke provide clear visual indication of the valve opening/stroke status.

MP2000-SRU/SRD/NSR Multi-Signal Actuators

MP2000 SRU/SRD/NSR Actuators with spring return safety function and non-spring return are for fine regulation of large control valves under the demand of the HVAC controller. MP2000 SR can be controlled by either a modulating or a 3-point control signal and is used specifically with the VP221x SmartX PIBCV valves.

Features

- Manual operation mechanical and/or electrical
- Position indication, LED signalization
- Selectable speed 4 or 6 s/mm (3 or 6 s/mm NSR)
- Automatic Stroke Calibration
- Linear to EQ% Curve Adaptation
- Anti-oscillation function

Product Description

MP2000 SRU/SRD/NSR Actuators with spring return safety function and non-spring return are for fine regulation of large control valves under the demand of the HVAC controller. MP2000 SR can be controlled by either a modulating or a 3-point control signal and is used specifically with the VP221x SmartX PIBCV valves.

MP4000 Multi-Signal Actuator for VP222x SmartX PIBCV, DN200...250 (8...10")

The MP4000 Actuator is primarily designed to regulate valves in response to the demand of a controller in HVAC systems. MP4000 can be controlled by electronic controllers with modulating or 3-point control output.

Features

- Manual operation mechanical and/or electrical
- Position indication, LED signalization
- Selectable speed 3 s/mm or 6 s/mm
- Automatic adaptation of stroke to valve's end position that reduces commissioning time (self-stroking)
- Integrated external switch
- Characteristic optimization
- Adjustable stroke limitation
- Anti-oscillation function
- Pulse or continuous output signal (K2, K4)
- Voltage or current output signal U
- External reset button
- Auto detection of Y signal
- 3-point floating or modulating control selection
- Galvanic isolation Y, U and output terminal K2, K4
- Thermic and overload protection
- Precise regulation and fast response on 3-point signal (0.01 s)

SP90 Multi-Function Actuator High Accuracy Multi-Function Field Bus Actuators

Product Description

Schneider Electric's SpaceLogic SP90 is a high accuracy multi-function field bus actuator, specifically designed for use in combination with DN10...32 (3/8"...1¼") SmartX PIBCV valves.

The high positional accuracy, together with the linear flow characteristic of the SmartX PIBCV valve, allow the SpaceLogic SP90 to be used as a flow indicator. When the SP90 is connected to temperature sensors across a coil, heat consumption will also be calculated.

Set up of the actuator and valve parameters are all made via fieldbus. The remote flow adjustment saves considerable time during mechanical installation/flow balancing with no need to adjust the flow setting dial on the valve.

Features

- All Remote design flow settings made from the BMS
- Pluggable cables with Daisy chain connectivity allowing for super quick installation and reduction of mis-wiring
- LED status indication
- Auto MAC addressing
- Alarm reporting
- Spare 0...10 V and 2xPt1000 input
- Additional 0...10 V output

Zone Valves

PopTop™

Erie's motorized hydronic valves, the PopTop™, provide convenient, reliable and easy installation for a variety of heating and cooling applications. Installation is a snap with easy, one-handed removal or engagement of the actuator to the valve body. Push the button and lift. It's that simple.

Features

- One-handed engagement or removal of the motorized actuator to the valve body.
- Valve actuator can be easily attached after the valve body has been installed into the system.
- Mounts quickly and easily without the need of linkages or calibration.
- Available in 2-way and 3-way port configurations, 1/2" (15mm) through 1-1/4" (32mm) sweat or 1/2" (15mm) to 1" (25mm) threaded connections, 1.0 to 8.0 Cv range.
- Available factory coupled, or as individual bodies and actuators.
- Direct replacement for all existing PopTop™ applications.
- Rugged 400 PSIG rated brass forged body design for long life.
- UL listed actuator.

Erie Family of Products

PopTop™ Zone Valves

- 1/2", 3/4", 1" and 1-1/4" Sweat, NPT and Inverted Flare Union.
- Two-position (on/off), 2-way and 3-way.
- General close-off or High close-off.
- Low voltage or line voltage.

PopTop™ Modulating Valves

- 1/2", 3/4", and 1-1/4" Sweat, NPT.
- Three-wire (on/off), 2-way and 3-way.
- 0-10, 0-5, 5-10 Vdc or 4-20 mA proportional inputs.
- Spring return or non-spring return.
- Time out feature available.

PopTop™ Two Position Valves & Actuators

General Close-Off

For your residential and commercial applications, Erie's General Close-Off valves and actuators offer precision control for 2-position (on/off) spring return temperature control. The General Close-Off may be used in a wide range of applications such as radiant baseboard and fan coil for easy installation and maintenance.

High Close-Off "HCO"

For high-rise and commercial applications, where higher close-off is required, our High Close-Off valves and actuators offer precise temperature control. Our two-position (on/off) "HCO" actuator may be interchanged with General Close-Off actuators. This may be used in applications such as fan coil and VAV reheat.

Features

- Direct replacement for all existing two-position, motorized PopTop applications.
- Sized to fit most baseboard applications.*
- Rugged Brass forged 400 psig rated valve body.
- Up to 60 PSI (75 PSI for HCO valves and actuators) pressure differential close-off.
- Spring return operation, normally closed or normally open.
- Voltages 24 to 277 VAC.
- End switch option on general temperature models.
- Terminal block option on general temperature models (24V).
- Chilled, hot water, and low pressure/low temperature steam applications.
- Cv 1.0 to 8.0.
- Hysteresis synchronous motor design for long life.
- Meets or exceeds ANSI IV standard for close-off.
- UL Listed actuator.

* General Close-Off Valves & Actuators only.

Erie VM PopTop Series Modulating Valves Floating “T” & Proportional “P”

Standard and Spring Return Modulating Valves

Product Description

The Erie™ Modulating PopTop™ Series valve actuator assemblies are designed for closed hydronic heating and cooling systems. The Modulating PopTop is used to control fluid flow in fan coil units, VAV reheat, unit ventilators, AHUs and radiant applications.

The Modulating PopTop Proportional (P) type is compatible with any 0 to 10 Vdc or 4 to 20 mA signal with jumper selectable operating range and action resulting in precise positioning. The floating (T) type is compatible with any 24 Vac three-wire signal when three minute time-out logic resides in the valve actuator or system controller.

The Modulating PopTop valve assemblies allow the actuator to be snapped onto, or off from, the valve body. The actuator can be mounted after the valve body has been installed into the system without the need for linkages or calibration.

Available in standard (non-spring return) and spring return modulating actuators. The two-way spring return modulating actuators are provided in either normally open or normally closed operation. The three-way valves are available in normally closed operation only. Valve body reversal provides normally open flow for three-way valve bodies.

Features

- Magnetic clutch to maximize the life of the motor and gear train
- Manual operating lever/position indicator facilitates field setup
- Easy to use lever terminal blocks
- Actuator can be installed after the valve body
- Three wire floating and 0 to 10 Vdc or 4 to 20 mA proportional available
- Spring return will return actuator to normal position when the power is lost for more than two minutes.

Erie VM PopTop Series Valve Bodies and Actuators

Product Description

Erie™ PopTop™ Series valve bodies and actuators provide easy installation for a variety of heating and cooling applications. The valve’s actuator can be installed after the valve body has been installed onto the fan coil, baseboard or air handler. VS Series valves are available for low pressure steam applications. PopTop Series are two position spring return valves. When powered, the actuator moves to the desired position, tensing the spring return system. When power is removed the actuator returns to the normal position. PopTop Series two position spring return valves can be purchased with an optional built-in auxiliary SPDT end switch for interfacing or signaling; for example, zone pump burner control. Actuators are designed for cycling applications (not constantly powered).

Features

- Direct replacement for all existing two-position PopTop applications
- Hysteresis synchronous motor for long life
- Spring return operation provides a fail-safe
- Valve body rated for 400 psi static pressure
- Available in a variety of voltages
- Actuator mounts directly onto valve body without need for linkages or calibration
- Manual override lever (normally closed only)
- Actuator can be replaced without any tools, or removal of valve from system
- VS Series available for low pressure steam

Specifications

Erie™ PopTop, 2/3-Way VM SR/NSR Assembly Flow Patterns

Modulating Spring and Non-Spring Return PopTop, Two-Way and Three-Way VM Assemblies Flow Patterns

Piping

- The three-way is only configured as normally closed. For normally open configuration to the coil, turn the valve around. For proportional valves, set the control action (direct or reverse accordingly).
- The valve should be used in a closed-loop system.
- All valves must be piped so the plug closes against the direction of flow. For two-way valves, flow is from port B to port A. For normally closed three-way valves, B is the service port and A is the bypass port. For normally open three-way valves, A is the service port and B is the bypass port.
- Three-way VM valves must be piped in a mixing configuration, not diverting.

CAUTION: Do not use VM series valves in "open" systems. Excess make-up water may cause damage to the valve.

Follow proper water treatment practices and system procedures. Refer to document F-26080; EN205, Water and Steam System Guidelines.

Note: Normally open actuators are not to be used on three-way valves to achieve normally open configurations. Use a normally closed actuator and pipe as shown in Figure-2.

Two-Position Spring Return PopTop Two-Way and Three-Way VT/VS Assemblies Flow Patterns

The VT/VS series are two-position spring return valves. When powered, the actuator moves to the desired position, tensing the spring return system. When power is removed the acutator returns to the normal position. The VT/VS series two-position spring return valves can be purchased with an optional built-in auxiliary SPDT end switch for interfacing or signaling; for example, zone pump burner control.

2.15 ACTUATORS

A. Electronic Direct Couple Damper (and Valve) Actuators

[Schneider Electric SmartX Actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric
2. Direct-coupled typenon-hydraulic designed for minimum 100,000 full-stroke cycles at rated torque.
3. Direct-coupled damper actuators must have a five-year warantee.
4. Size for torque required for damper seal at maximum design conditions and valve close-off pressure for system design.
5. Direct-coupled damper actuators should accommodate 3/8", 1/2" 1.05" round or 3/8"-1/2" and 3/4" square damper shafts.
6. Actuator operating temperature minimum requirements: 44, 88 and 133lb.-in. are -25°F-130°F (-32°C-55°C). The 30, 35, 60, 150 and 300lb. -in. are -25°F-140°F (-30°C-60°C). The270lb. -in. are -22 °F-122°F (-30 °C-50 °C).
7. Overload protected electronically throughout rotation except for selected Floating actuators the have a mechanical clutch.
8. Spring Return Actuators: Mechanical fail safe shall incorporate a spring-return mechanism.
9. Non-Spring Return Actuators shall stay in the position last commanded by the controller.
10. Power Requirements: 24Vac/dc [120Vac] [230Vac]
11. Proportional Actuators controller input range from 0-10Vdc, 2-10Vdc or 4-20mA models.
12. Housing: Minimum requirement NEMA type 2
13. Actuators with a microprocessor should not be able to be modified by an outside source (crackedor hacked).
14. Actuators of 133 and 270lb.-in. of torque or more should be able to be tandem mount or "gang" mount.
15. Agency Listings: ISO9001, cULus, CE and CSA

B. 1/2"-3/4" Ball Valve Electronic Actuators

[Schneider Electric VBB/VBS ballvalves actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Size for torque required for valve close-off pressure for system design.
3. Coupling: Direct coupled to the valve body without the use of external devices or tools (snap-on).
4. Auxiliary End Switch (optional) is to be SPST 24Vac/Vdc, 101mA to 5mA maximum on selected two-position models.
5. Controller Signal Two-position, Floating or Proportional (0-5 Vdc, 0-10 Vdc, 5-10 Vdc, or 4-20mA dc). The design allows for changing selections via DIP switches without removal of cover.
6. Manual operating lever and position indicator must best and are on all models.
7. Power Requirements: 24 Vac for floating, proportional, and 110-230 Vac for two position multi-voltage types
8. Actuators must be available with either Spring Return (SR) or Non-Spring Return (NSR) models.
9. Operating Temperature Limit Floating is to be 32-140°F (0-60°C) Proportional 32-140°F (0-60°C) Two-Position 32-169°F(0-76°C)
10. Wiring (depending on model) Removable Terminal Block, 10 ft. (3.05 m) Plenum Cable, 18 in. (45cm) Appliance Wire
11. Locations must be rated NEMA 2, IEC IP31. (Indoor Use Only.) Actuators with terminal block or plenum cable leads are plenum rated per UL file number E9429.
12. Agency Listings: ISO9001, cULus, andCE.
13. Schneider Electric shall warrant all components for a period of 5 years from the date of production.

C. 2-way (1/2"-3") and 3-way (1/2"-2") Ball Valve Actuators

[Schneider Electric VB-2000 ball valves actuators]

1. Manufactured,brand labeled or distributed by Schneider Electric.
2. Size for torque required for valve close-off pressure for system design.
3. Actuators are to be available in spring return (SR) and non-spring return (NSR) models.Spring Return (SR) actuators are to provide a choice to return direction.
4. Actuators are to be available in models for two-position, floating and proportional control.
5. All actuator models are to be equipped with pigtail leads
6. Actuators must be available in models with manual override.
7. Actuators must be available in models with auxiliary switch(es).
8. Operating temperatures: Non-Spring Return (NSR) actuators with 44 and 88 lb.-in. of torque must be -25 to 130°F (-32 to 55 °C). All other actuators are -22 to 140°F (-30 to 60°C)
9. Actuators must be NEMA 2 rated.
10. Allactuators are to have a five-year warranty.
11. AgencyListings: ISO9001, cULus, and CE.

D. Zone Valve Actuators - Two-position Spring Return (SR)

[Schneider Electric Erie Zone Valve PopTop™ Two-position valve actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valves are to be two-position (On-Off), spring return (SR) with general or High CloseOff models.
3. Actuator Voltage Models are 24Vac @ 50/60Hz, 110Vac @ 50Hz and 120Vac @ 60Hz, 230Vac @ 50Hz, 240Vac @ 60Hz, 208Vac @ 50/60Hz., 277Vac@50/60Hz.
4. End (auxiliary) Switch, 24 -240 Vac Models: 24–250 Vac/101 mA min. to 5 A max. and 9–30 Vdc @100 mA max. 277Vac.
5. Actuators are to have manual override on normally closed (NC)models and assemblies to valves without the use of tools, linkages or calibration.
6. Actuators are to have a hysteresis synchronous motor.
7. North America Agency Listings: UL873: Underwriters laboratories (Category Temperature Indicating and Regulating Equipment). CUL: UL Listed for use in Canada by Underwriters Laboratory. Canadian Standards C22.2 No. 24.

E. 2"–18" 2-way and 2"–16" 3-way Butterfly Valve Non-Spring Return(NSR) Linear Electronic Valve Actuators with Linkage Butterfly Valve Actuators

[Schneider Electric S70 red w/ handwheel, w/ heater actuators]

1. Manufactured,brand labeled or distributed by Schneider Electric.
2. The butterfly valve actuators are to be Non-Spring Return (NSR)two-position and proportional taking 0–10 Vdc or 4–20 mA models. All Actuators are to be NEMA 4,manual override (handwheel) two auxiliary switches, and built-in heater.
3. Actuator close-offs and Cvs must be appropriate for the valve size in a typical HVAC application.
4. Actuators must be available in 24 Vac and 120 Vac models.
5. Actuators must have [Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
6. Proportional models must have feedback of 0–10 Vdc or 4–20 mA.
7. Actuator operating temperature shall be -40–150°F (-40–60°C).
8. Actuator agency listings (NorthAmerica) UL, CSA and CE.

F. 2"–4" 2-way and 3-way Butterfly Valve Spring Return (SR) Electronic Valve Actuators

[Schneider Electric SmartXMx41-7153 actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. The butterfly valve actuators are to be Spring Return (SR) two-position and proportional taking 2–10 Vdc or 4–20 mA models. All Actuators are to be NEMA 2.
3. Actuator close-offs and Cvs must be appropriate for the valve size in a typical HVAC application.
4. Actuators must be available in 24 Vac models.
5. Actuators shall have two SPD Tauxiliary switch models.
6. Actuators must have [Internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
7. Proportional models must have feedback of 2–10 Vdc or 4–20 mA.
8. Actuator operating temperature shall be -22–140°F (-12–60°C)
9. Actuators are to have a 5-year warranty.
10. Actuator agency listings (NorthAmerica) UL, CSA and CE

G. 2"–6" 2-way and 3-way Butterfly Valve Non-Spring Return (NSR) Electronic Valve Actuators

[Schneider Electric SmartXNR-22xx-5xx actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric
2. The butterfly valve actuators are to be Non-Spring Return (NSR) two-position and proportional taking 0–10Vdc or 4–20mA models. All Actuators are to be NEMA 2.
3. Actuator close-offs and CVs must be appropriate for the valve size in a typical HVAC application.
4. Actuators must be available in 24Vac models.
5. Actuators shall have two SPDT auxiliary switch actuators must have internal wiring isolation for parallel wiring multiple units that eliminates the risk of feedback from one actuator to another.
6. Proportional models must have feedback of 2–10 Vdc or 4–20 mA.
7. Actuator operating temperature shall be -22–140°F (-12–60°C)
8. Actuators are to have a 5-year warranty.
9. Actuator agency listings (NorthAmerica) UL, CSA andCE
10. Actuator agency listings (North America) UL, CSA and CE

H. ½"–2" Bronze Body, Linear Electronic Valve Actuators with 67 or 78lbs. of force Globe Valve Actuators

[Schneider Electric MG350V]

1. Manufactured, brand labeled and distributed by Schneider Electric.
2. Actuator must have bi-color LED status indication for motion indication, autocalibration and alarm notification.
3. When the actuator is properly mounted must have a minimum of a NEMA 2 (IP53) rating.
4. Actuators are to be non-spring return.
5. Actuators are to be floating (used for two-position) or proportional models.
6. Proportional models will have optional models with a position output signal with field selectable 2–10 Vdc and 0–10 Vdc input signals and selectable input signal director reverse acting.
7. Actuator must have autocalibration which provides precise control by scaling the input signal to match the exact travel of the valve stem
8. Actuators must come in models with Pulse Width Modulated (PWM) with field-selectable 0.59 to 2.93 sec and 0.1 to 25.5 sec input signal ranges with a position output signal
9. Actuators must have manual override with automatic release.
10. Models with position feedback output signal include field selectable 2–10Vdc or 0–5 Vdc output signal
11. Removable wiring screw terminal with ½" conduit opening.
12. Actuator operating temperature ranges:
 - a. When controlling fluid up to 266°F (130°C) = ambient air temperature is to be 23–131°F (-5–55 °C)
 - b. Fluid up to 281 °F (138 °C) = 23–127 °F (-5–53 °C)
 - c. Fluid up to 340 °F (171 °C) = 23–115 °F (-5–46 °C)
 - d. Fluid up to 400 °F (204 °C) = 23–102 °F (-5–39 °C)
13. Actuator agency Listings (North America)
 - a. cUL-us LISTED mark, per UL 60730-1 and -2-14 and CAN/CSA E60730-1 and -2-14 Automatic Electric Controls
 - b. NEMA 2
 - c. NEC class 2 FCC part-15 class B
 - d. Canadian ICES-003
 - e. ESA registered
 - f. Plenum rated per UL2043

I. ½"–2" Bronze Body, Linear Electronic Valve Actuators with 105lbs. of force Globe Valve Actuators

[Schneider Electric SmartXMx51-7103 Series Linear SR Valve Actuator]

1. Manufactured, brand labeled and distributed by Schneider Electric.
2. Actuators must have Two-Position, Floating, and Proportional models.
3. Proportional models will have a controller input signal of either 0–10Vdc, 2–10Vdc, 4–20mAdc, 0–3 Vdc, or 6–9 Vdc. Control function direct/reverse action is switch selectable on most models.
4. Actuator force is to be 105lb. (467 newton) with ½" (13 mm) nominal linear stroke
5. Power requirements 24 Vac, 120Vac or 230Vac depending on model.
6. Actuator housings rated for up to NEMA2/IP54.
7. Actuator is to have overload protection throughout stroke.
8. Actuator Operating temperature -22–140°F (-30–60°C).
9. Actuator must automatically set input span to match valve travel.
10. Actuator must have manual override to allow positioning of valve and preload.
11. Actuator is to be spring return.
12. Actuator is to mount directly to valves without separate linkage.
13. Actuator is to have a 5-year warranty.
14. Actuator agency Listings (North America)
 - a. UL873: Underwriters Laboratories (File# E9429 Category Temperature-Indicating and Regulating Equipment).
 - b. CUL: UL Listed for use in Canada by Underwriters Laboratories. Canadian Standards C22.2 No.24-93.

J. ½"–2" Bronze Body and other valves Linear Electronic Valve Actuators with 220 of force Globe Valve Actuators

[Schneider Electric SmartXMx51-720x Series Linear SR Valve Actuator]

1. Manufactured, brand labeled and distributed by Schneider Electric.
2. Actuators must have Two-Position for a SPST controller, floating for a SPST controller, and proportional models will a controller input signal of either a 0–10 Vdc, 2–10 Vdc, 4–20 mAdc, or 6–9Vdc. Control function direct/reverse action is jumper selectable
3. Actuator is to be spring return.
4. Actuator will have 220 lb.force (979 newton) with ½" (13 mm) or 1" (25mm) nominal linear stroke
5. Feedback on proportional model with 2–10 Vdc (max. 0.5 mA) output signal or to operate up to four like additional slave actuators.
6. Actuator operating temperature is 0–140°F (-18–60°C).
7. Actuator must automatically set input span to match valve travel
8. Actuator is to have a 24 Vac power supply on two-position and proportional models and 120 Vac on two-position models.
9. Actuator is to be spring return.
10. Actuator housings rated for up to NEMA2/IP54
11. Actuator must have manual override to allow positioning of valve and preload
12. Actuator is to mount directly to valves without separate linkage.
13. Actuator is to have a 5-year warranty.
14. Actuator agency Listings (NorthAmerica)
 - a. UL873: Underwriters Laboratories (File #E9429 Category Temperature-Indicating and Regulating Equipment).
 - b. CUL: UL Listed for use in Canada by Underwriters Laboratories.Canadian Standards C22.2 No.24-93.

K. ½"–2" Bronze Body, SpringReturn (SR)Linear Electronic Valve Actuators with Linkage Globe Valve Actuators

[Schneider Electric SmartX Actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Actuators with 35, 60, 133, or 150lb.-in of force depending on model.
3. Actuator housings rated for up to NEMA 2/IP54 with a 150lb.-in. rated a NEMA 4.
4. Actuators are to be spring return.
5. Actuators are to have Two-position, Floating and Proportional models.
6. Actuators must have overload protection throughout rotation.
7. Actuator have an optional built-in auxiliary switch to provide for interfacing or signaling on selected models.
8. Actuators are to have a 5-year warranty.
9. Actuator agency listings (NorthAmerica)
 - a. UL-873 Underwriters Laboratories
 - b. Canadian Standards C22- 2No.24-83, CUL

L. ½"–2" Bronze Body, Spring Return (SR) Linear Electronic Globe Valve Actuators with Linkage. Non-Spring Return (NSR) Linear Valve Actuator with Linkage.

[Schneider Electric Forta M400A-VB, M800A-VB, M900A and M1500x-VB Screw Mounted on VentaVB-7000s]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Actuators are to be either floating SPDT control or proportional control 0–10, 2–10 Vdc or 4–20mA with a 500-ohm resistor included.
3. Actuators are to be direct/reverse with selectable DIP switches.
4. Actuators are to have 90 lb. (400N), 180 lb. (800N), or 337 lb. (1500N) of force on Non-Spring Return (NSR) 157lb. of force on the Spring Return model. Note: Not every actuator is for every valve.
5. Actuators are to be powered with 24 Vac or 24 Vdc.
6. All Non-Spring Return (NSR) actuators are to be NEMA 2, vertical mount only. Spring Return (SR) actuators are to have NEMA 4 models.
7. Actuators must have manual override to allow positioning of the valve.
8. Actuators must have selectable valve sequencing and flow curves of either equal percentage or linear.
9. Actuators must have feedback.
10. Actuators must have internal torque protection throughout stroke.
11. The operating temperature is to be:
 - a. 122°F (50°C) For chilled water applications
 - b. 113 °F (45°C) ambient at 281 °F (138 °C) fluid temperature
 - c. 107 °F (42°C) ambient at 300 °F (149 °C) fluid temperature
 - d. 100 °F (38°C) ambient at 340 °F (171 °C) fluid temperature

M. 2½"–6" Cast Iron Flanged Globe Valve Body (and other valves) Non-Spring Return (NSR) Linear Electronic Valve Actuators with Linkage

[Schneider Electric Forta M800A and M1500A Tall U-Bolt Actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Actuators are to be either floating SPDT control or proportional control 0–10, 2–10 Vdc or 4–20mA with a 500-ohm resistor included.
3. Actuators are to direct/reverse acting with selectable DIP switch.
4. Actuators are to have 180 lb.(800N) or 3 37 lb .(1500N) of force.
5. Actuators will need a 24 Vac or Vdc power supply.
6. Actuators are to be rated NEMA 2, vertical mount only.
7. Actuators must have manual override to allow positioning of the valve.
8. Actuators must have selectable valve sequencing and flow curves of either equal percentage to linear. A 2–10 Vac feedback.
9. Actuators must have [Internal torque protection throughout stroke.]
10. The operating temperature is to be:
 - a. 122°F(50°C) For chilled water applications
 - b. 113 °F (45°C) ambient at 281 °F(138 °C) fluid temperature
 - c. 107 °F (42°C) ambient at 300 °F(149 °C) fluid temperature
 - d. 100 °F (38°C) ambient at 340 °F(171 °C) fluid temperature
11. 90 °F (32°C) ambient at 366 °F (186°C) fluid temperature
12. Actuator agency listings (North America) UL873, cULus, RCM, CE

N. 2½"–6" Cast Iron Flanged Globe Valve Actuators 220lbs. force.

1. Actuators must have Two-Position for a SPST controller, Floating for a SPST controller, and Proportional models will a controller input signal of either a 0–10 Vdc, 2–10 Vdc, 4–20 mAdc, or 6–9Vdc. Control function direct/reverse action is jumper selectable.
2. Actuator is to be spring return.
3. Actuator will have 220 lb. force (979 newton) with ½" (13mm) or 1" (25 mm) nominal linear stroke.
4. Feedback on proportional model with 2–10 Vdc (max. 0.5 mA) output signal or to operate up to four like additional slave actuators.
5. Actuator must automatically set input span to match valve travel.
6. Actuator Operating temperature 0–140°F (-18–60°C) up to a maximum valve fluid temperature of 300 °F (149 °C).
7. Actuator is to have a 24 Vac power supply on two-position and Proportional models and 120 Vac on two-position models.
8. Actuator housings rated for up to NEMA2/IP54.
9. Actuator must have manual override to allow positioning of valve and preload.
10. Actuator is to mount directly to valves without separate linkage.
11. Actuator agency Listings: UL873, CUL: UL.

O. 2½"–6" Cast Iron Flanged Globe Valve Actuators with Linkage SR.

1. Actuators with 60, 133, or 150lb.-in of force depending on model.
2. Actuator housings rated for up to NEMA 2/ IP54 with a 150lb.-in. rated a NEMA 4.
3. Actuators are to be spring return.
4. Actuators are to have two-position, Floating and Proportional models.
5. Actuators must have overload protection throughout rotation.
6. Actuator have an optional built-in auxiliary switch to provide for interfacing or signaling on selected models.
7. Actuator agency listings: UL-873, C22-2 No.24-83, CUL.

P. Pneumatic Globe Valve Actuators

[Schneider Electric MK Series die-cast aluminum housing actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Pneumatic actuators must have field replaceable neoprene diaphragms.
3. All actuators shall be Spring Return (SR) with the spring retracting actuator shaft and raising the valve stem on loss of air pressure.
4. Actuators must have an operating temperature of -20–220°F (-29–104°C)
5. Actuators shall be models with 6 sq.in. 11, 50 and 100sq. ineffective area for the psi to push against.
6. Actuators may not "spark" under normal conditions.
7. Actuators must except an optional positive pilot positioning relay.
8. Actuators will have a maximum air pressure of 30 psig.
9. Actuators must have models with spring ranges for typical HVAC applications.

Q. Pneumatic Damper Actuators

[Schneider Electric MK-0000 die-cast aluminum housing actuators]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Pneumatic actuators must have field replaceable neoprene diaphragms.
3. All actuators shall be Spring Return (SR) with the spring retracting actuator shaft on loss of are pressure.
4. Actuators must have an operating temperature of -20–160°F (-29–71°C)
5. Actuators shall be models with 8sq.in. 11, 20 and 40 sq.in.(dualmounted) effective area for the psi to push against.
6. Actuators may not “spark”under normal conditions.
7. Actuators must except an optional positive pilot positioning relay. Relay is to be standard on 20sq. in. models.
8. Actuators will have a maximum air pressure of 30 psig.
9. Actuators must have models with spring ranges for typical HVAC applications.

2.16 CONTROL VALVES

A. Zone Valves, Two-Position, Control Valves

[Schneider Electric Erie zone valves]

1. Manufactured, brandl abeled or distributed by Schneider Electric
2. Valve application are for hot and chilled water models, up to 50% glycol.Steam models up to 15 psi
3. Valve seat leakage is to ANSI class IV(0.01%) with pressure at inlet (B-port/A-port, if3-way).
4. Valves are to be: Body 300 psi rated forged brass, Stem-nickel plated, Seat-brass, Paddle-BunaNor highly saturated nitrile.
5. Valves are to be2-way or 3-way with connections options of NPT (threaded female), Sweat (SW),Inverted flare (IFL), Societ yAutomotive Engineers male (SAE)Rp Metric threaded female, depending on models, with end switch option on general temperature models.
6. Actuators are to be Spring Return (SR) normally open (NO) and normally closed (NC) models. Actuators are to have “HighClose-off” models.
7. Valve line sizes are ¾”, ½”, ¾”, 1”, and 1¼” depending on model.
8. Valve CVs are to from 1 to 8 depending on model.
9. Actuators are to be UL listed

B. Bronze½”–2”GlobeControlValves

[SchneiderElectricVentaVB-7000valves]

1. Control Valves: Factory fabricated, with body material, and pressure class based on maximum pressure and temperature rating of piping systemwith a body rating of not less than 400 psig at 150°F, 321 psig at 281°F per ANSI B16.15.
2. Valve Manufacturer: Must have at least 25 years of valve manufacturing and must meet the provisions of Section 1605 of the American Recovery and Reinvestment Act Buy American Requirements. Manufacturer shall water test all valves prior to shipment.
3. Valves two way NPS 2” and Smaller: Operator,stem and plug assembly, and spring-loaded PTFE/ EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
 - a. Standard duty bronze body,316 stainless steel vertical stem,brass plug,soft seal,and bronze seat, renewable packing cartridge,and screwed/sweat/flared ends.Valvesshallhave allowable media temperature of 20°F –281°F to assure reliabilitywith dual temperature applications.
 - b. Heavy duty bronze body,316 stainless steel vertical stem, 316 stainless steel plug,soft seal, and 316 stainless steel seat, renewable packing cartridge, and screwed ends.Valves shall have allowable media temperature of 20 °F –340 °F to assure to assure reliability with dualtemperature applications.
 - c. High temperature bronze body, 316 stainless steel vertical stem,316 stainless steel plug, and 316 stainless steel seat, renewable packing cartridge,and screwed ends.Valves shall have allowable media temperature of 20°F –400°F.
4. 2-way fluid system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves with flow coefficients of 0.4 and higher to provide stable control under light load conditions.
 - b. Maximum Allowable Seat Leakage:Standard and heavy duty valves must be designed to meet ANSI Class V (0.0005 ml per minute per “of orifice diameter per psi differential)up to 35 psi close off differential pressure and ANSI Class IV seat leakage(maximum 0.01% of full openvalve capacity) above 35 psi with appropriate actuator. High temperature valves must meet ANSI Class III seat leakage (maximum 0.1% of full open valve capacity).
 - c. The valve must be able to operate with a full-open operating differential of no less than 87 psi.

- d. Flow Characteristics: Modified equal percentage characteristics for standard duty water applications and modified linear for heavy duty and high temperatures team applications with gradual opening for light loads.
- e. Sizing:
 - a. Two Position Water: Line size or size using a differential pressure of 1 psi.
 - b. Modulating Water: 5PSI or twice the load pressure drop.
 - c. Pressure drop across steam valve at a maximum flow of 80 percent of inlet pressure up to 15psig and 42% of absolute (gage pressure +14.7) inlet pressure above 15 psig inlet.
 - d. 100 psi saturated steam maximum inlet pressure for heavy duty bronze body globe valves ½"–2".
 - e. 150 psi saturated steam maximum inlet pressure for high temperature bronze body globe valves ½"–2".
 - f. 35 psi saturated steam maximum inlet pressure for standard duty bronze body globe valves ½"–2".
- 5. Valves 3-Way mixing (two inlets and one outlet) NPS2" and Smaller:
 - a. Operator, stem and plug assembly, and spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
 - a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, and bronze seat, renewable packing cartridge, and screwed or sweat ends. Valves shall have allowable media temperature of 20 °F–281 °F to assure reliability with dual temperature applications.
 - b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable disc and packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20°F–340°F to assure reliability with dual temperature applications.
- 6. 3-Way mixing hydronic system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves to provide stable
 - b. Maximum Allowable Seat Leakage: A port must be designed to meet ANSI Class V (0.0005ml per minute per "of orifice diameter per psi differential) up to 35 psi close off differential pressure and ANSI IV seat leakage (maximum 0.01% of full open valve capacity) above 35 psi with appropriate actuator. B port must meet ANSI Class III seat leakage (maximum 0.1% of full open valve capacity).
 - c. The valve must be able to operate with a full-open operating differential of 87 psi.
 - d. Flow Characteristics: Modified linear characteristics with gradual opening for light loads.
 - e. Sizing: Modulating Water: Minimum 5 psi or at least equal to the load pressure drop.
- 7. Valves 3-Way diverting (one inlet and two outlets) NPS2 "and Smaller:
 - a. Operator, stem and plug assembly, and spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Valves must be designed specifically for diverting service, and mixing valves designed for mixing service must not be used for diverting applications. Material grade properties must meet the fluid temperature and pressure requirements: Standard duty bronze body, 316 stainless steel vertical stem, brass plug, and bronze seat, renewable disc and packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F–281°F to assure reliability with dual temperature applications.
- 8. 3-Way diverting hydronic system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves to provide stable control under light load conditions.
 - b. Maximum Allowable Seat Leakage: ANSI Class III seat leakage (maximum 0.1% of full open valve capacity).
 - c. Maximum Allowable Pressure Differential: 35 psi in. an open position.
 - d. Flow Characteristics: Modified linear characteristics with gradual opening for light loads.
 - e. Sizing:
 - a. Modulating Water: Minimum 5 psi or at least equal to the load pressure drop.
- 9. Required Certifications:
 - a. Pressure Equipment Directive (PED97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals), Canadian Registration Number.
- 10. Valve and Operator:
 - a. To assure maximum performance and operation of the valve assembly both the valve and the actuator must be tested and approved by the valve manufacturer to assure compatibility of all components and performance to the specifications.

C. 2"–6" Cast Iron Flanged Valves

[Schneider Electric VB-8000 and VB-9000 valves]

- 1. Bodies
 - a. Shall be American Factory fabricated with ASTM A 126 Class B cast iron body material with the pressure class within the maximum pressure and temperature rating of the piping system. (125 body rating with not less than 200 psig at 150°F, decreasing to 169 psig at 281°F per ANSA B16.1)

2. Manufacturer
 - a. Shall have at least 25 years of valve manufacturing and meet the provisions of Section 1605 of the American Recovery and Reinvestment Act, buy American, requirements. All valves shall be water tested by manufacturer prior to shipment.
3. Serviceability
 - a. 2-Way valve operators, stem and plug assemblies and spring-loaded PTFE/EPDM valve stem packing cartridges must be removable for future replacement to restore the valves back to their original condition.
4. Construction
 - a. Material grades must meet the fluid temperature and pressure requirement temperatures of 20°F–281°F to assure reliability throughout all application temperature ranges.
5. Packings
 - a. Shall be cartridges suitable for replacement as units with standing the full operating temperature ranges, including daily and seasonal fluctuations of water, 60% glycol and steam fluids.
6. Characteristics
 - a. Rangeability: Twoway, 100:1 and greater for stable control under light load.
 - b. Shutoff, 2-Way: Leakage allowed: ANSI Class IV (0.01% of max flow)
 - c. 3-Way: Leakage allowed: ANSI Class III (0.1% of max flow)
 - d. Flow curves: 2-Way modified equal percentage characteristic.
 - e. Mixing and Diverting: Linear, modified with gradual opening for light loads.
7. Piping
 - a. Diverting valves, with the common port at the bottom can be used for mixing.
 - b. Mixing valves with the common port at the end must not be used for diverting applications.
8. Sizing
 - a. Two Position Water: Line size or size using a differential pressure of 1 psi.
 - b. Modulating Water: 5PSI or twice the load pressure drop
 - c. Steam, 2-Way: maximum pressure drop across the valve at a maximum flow of 80 percent of inlet pressure up to 15 psig. Above 15 psig inlet, 42% of absolute (gage pressure +14.7) inlet pressure.
9. Certifications for All Models
 - a. Pressure Equipment Directive (PED97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals)

D. Steam Control Valves

1. ½"–2" Steam Service Designed Globe Valves
 - a. Body material, and pressure class based on maximum pressure and temperature rating of piping system with a body rating of not less than 400 psig at 150 °F, 321 psig at 281 °F per ANSI B16.15.
 - b. High temperature spring-loaded PTFE/EPDM valve stem packing cartridge must be removable for future replacement to restore the valves back to their original condition. Material grade properties must meet the fluid temperature and pressure requirements:
 - a. Standard duty bronze body, 316 stainless steel vertical stem, brass plug, soft seal, and bronze seat, renewable packing cartridge, and screwed/sweat/flared ends. Valves shall have allowable media temperature of 20 °F ...281 °F to assure reliability with dual temperature applications.
 - b. Heavy duty bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, soft seal, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F ...340 °F to assure to assure reliability with dual temperature applications.
 - c. High temperature bronze body, 316 stainless steel vertical stem, 316 stainless steel plug, and 316 stainless steel seat, renewable packing cartridge, and screwed ends. Valves shall have allowable media temperature of 20 °F ...400 °F.
 - c. Two-way fluid system globe valves shall have the following characteristics:
 - a. Rangeability: Greater than 100:1 for all valves with flow coefficients of 0.4 and higher to provide stable control under light load conditions.
 - b. Maximum Allowable Seat Leakage: Standard and heavy duty valves must be designed to meet ANSI Class V (0.0005 ml per minute per "of orifice diameter per psi differential) up to 35 psi close off differential pressure and ANSI Class IV seat leakage (maximum 0.01% of full open valve capacity) above 35 psi with appropriate actuator. High temperature valves must meet ANSI Class III seat leakage (maximum 0.1% of full open valve capacity).
 - c. The valve must be able to operate with a full-open operating differential of no less than 87 psi.
 - d. Flow Characteristics: Modified equal percentage characteristics for standard duty water applications and modified linear for heavy duty and high temperature steam applications with gradual opening for light loads.

- e. Sizing:
 - a. Pressure drop across steam valve at a maximum flow of 80 percent of inlet pressure up to 15 psig and 42% of absolute (gage pressure + 14.7) inlet pressure above 15 psig inlet.
 - b. 100 psi saturated steam maximum inlet pressure for heavy duty bronze body globe valves ½"...2".
 - c. 150 psi saturated steam maximum inlet pressure for high temperature bronze body globe valves ½"...2".
 - d. 35 psi saturated steam maximum inlet pressure for standard duty bronze body globe valves ½"...2".
 - f. Certifications for All Models: Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals)
2. 2½"...6" Steam Service Designed Globe Valves
- a. Bodies: Shall be American Factory fabricated with ASTM A 126 Class B cast iron body material with the pressure class within the maximum pressure and temperature rating of the piping system. (125 body rating with not less than 200 psig at 150 °F, decreasing to 169 psig at 281F per ANSA B16.1)

 - d. Packings: Shall be cartridges suitable for replacement as units withstanding the full operating temperature ranges, including daily and seasonal fluctuations of water, 60% glycol and steam fluids.
 - e. Characteristics
 - a. Rangeability: Two way,100:1 and greater for stable control under light load.
 - b. Shutoff, 2-Way: Leakage allowed: ANSI Class IV (0.01% of max flow)
 - c. Flow curves: 2-Way modified equal percentage characteristic.
 - d. Sizing
 - a. Steam, 2-Way: maximum pressure drop across the valve at a maximum flow of 80 percent of inlet pressure up to 15 psig. Above 15 psig inlet, 42% of absolute (gage pressure + 14.7) inlet pressure.
 - b. Certifications for All Models: Pressure Equipment Directive (PED 97/23/EC), RoHS (Restriction of Hazardous Substances) and REACH (Regulation, Evaluation, Authorization, and Restriction of Chemicals)

E. ½"-¾" Ball Valve

[Schneider Electric VBB/VBS Ball Valves]

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. ½" and ¾" Ball Valves:Forged brass body rated at no less than 600 psi, chrome plated brass ball with blowout proof stem or optional stainless steel ball with blow out proof stem,
3. Valves are to be in 2-way and 3-way configurations.
4. Connection: Female NPT end fittings, Teflon® PTFE seat, characterizing disc glass-filled PEEK providing equal percentage flow curve on 2-wayvalve.
5. Operating Temperature 20–250°F chilled or hot water with up to 60% glycol solution.
6. 2-way and Bypass port should be ANSI Class IV (0.01%ofCv) seat leakage.
7. Rangeability must be atleast 300:1.
8. Tool-less actuator connection.
9. System Static Pressure Limit should be 600 psig (4137Pa)
10. The manufacturer shall warrant all components for a period of 2 years from the date of production.

F. 2-way (½"-3") and 3-way (½"-2") Ball Valves

[Schneider Electric VB-2000 series]

1. Manufactured, brand labeled or distributed by SchneiderElectric.
2. Valves must be for control of hot or chilled water, or solutions of up to 50% glycol.
3. Ball valves must have close-offs of 40–130psi depending on size.
4. Valves will provide Cvs from 0.33–266 depending on size.
5. Valve characterizing insert,is to made of glass-filled Noryl™ and provide equal percentage flow.
6. Valve body is to made of forged brass ASTM B283-06 and rated for static pressure of 360 psi at fluid temperatures of 20–250 °F (-7–121 °C).
7. All valves are to have balls made of nickel/chromium plated brass with 2-way valves having stain-less steel balls as an option.All valve stems are to be stainless steel with reinforce Teflon® EPDMO-ring seals.

8. 2-way valves are to be ANSI Class IV (0.01% of Cv) shutoff. 3-way valves are to be ANSI Class IV (0.01% of Cv) piped coil-side outlet to the port A only.
9. Fluid (water) temperature are a minimum 20°F (-7°C) and a maximum of 250°F (121 °C).
10. Valves will have a two year warranty.

G. Pressure Independent Balancing Control Valves ½"–10"

[Schneider Electric SmartXPIBCV]

When selecting pressure independent valves the specifier should also revise section 232113 to NOT include balancing valves and also modify section 230593 to NOT require the individual balancing of each coil/valve combination.

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. NPS 2 and Smaller: PN16, stainless steel components.
3. NPS 2½ through 10: Class 125 cast iron body per ASME B16.1-2010, Material class B per ASTM A126-04 (2014), stainless steel components.
4. Accuracy NPS ¾" and Smaller: The control valves shall accurately control the flow from 0–100% rated flow with a differential pressure range of 2.32–58 psi for low and standard flow units, 5–58 psi for high flow units within 5% offset flow value.
5. Accuracy NPS 1 through 1¼: The control valves shall accurately control the flow from 0–100% rated flow with a differential pressure range of 2.9–58 psi for standard flow units, 5–58 psi for high flow units within 5% of set flow value.
6. Accuracy NPS 1½ through 4: The control valves shall accurately control the flow from 0–100% rated flow with a differential pressure range of 4.35–58 psi for standard flow units, 8.7 psi to 58 psi for high flow units within 5% of set flow value.
7. Accuracy NPS 5 through 10: The control valves shall accurately control the flow from 0–100% rated flow with a differential pressure range of 5.8–58 psi for standard flow units, 8.7–58 psi for high flow units within 5% offset flow value.
8. Flow Characteristics: Linear Control, selectable to equal percentage at the proportional valve actuator.
9. Field adjustable flow by means of a percentage of rated valve flow.
10. Position feedback output signal integrated into all proportional actuators.
11. 100% authority with modulating below 1% regardless of flow settings.
12. No cartridges requiring replace ment or maintenance.
13. Close off ratings shall be 232 psi for all valve sizes.

H. Butterfly Valves

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valve body are to be polyester coated iron ASTM A 126 lug mating with ANSI class 125/150 flanges.
3. Disc Type: Ductile iron nylon 11 coated.
4. Valve Stem:
 - a. 2–8" 416 stainless steel double D stem.
 - b. 10–12" 316 stainless steel double D stem.
 - c. 14" and larger: stainless steel round shaft woodruff key slot.
5. Valve Seat:
 - a. EPDM tongue and groove seat and molded O-ring flange seat
6. Flow Characteristics: Modified equal percentage.
7. Close-Off Pressure Rating: Bubble-tight shutoff (no leakage).
8. Valve Fluid Temperature Rating: -40–250°F (-40–121°C)
9. Valve will have two (2) inch extended neck (because of heat).
10. Valve must accept pneumatic or electric/electronic actuators
11. Valves must have a minimum of a two (2) year warranty.

I. High Performance Butterfly Valves

1. Manufactured, brand labeled or distributed by Schneider Electric.
2. Valve body are to be carbon steel with ANSI class 150 flanges
3. Disc Type: 316 stainless steel
 - a. Valve Stem: 17-4PH stainless steel
 - b. One-piece design
 - c. Blowout proof design
4. Valve Seat:
 - a. Resilient energizer totally encapsulated by the PTFE seat
 - b. Seat assembly locked in the body recess by full-faced seat retainer
 - c. Self adjusting for temperature changes and wear
5. Flow Characteristics: Modified equal percentage
6. Close-Off Pressure Rating: Bubble-tight shut off (no leakage) at rated maximum differential pressure
7. Valve Fluid Temperature Rating:
 - a. 40–500°F (-40–250°C)
 - b. On/Off steam application max. 150 psi pressure
 - c. Proportional steam application max. 50 psi pressure
8. Valve will have extended neck (because of heat)
9. Valve must accept pneumatic or electric/electronic actuators
10. Valve must have a minimum two (2) year warranty
