JIS flanged : in mm base  
Others : in inches base

## Corrosion Resistance of KITZ Stainless and High Alloy Steel Valves

KITZ stainless and high alloy steel valves are widely utilized in chemical, petrochemical, food and beverage, pulp and paper, pharmaceutical and other industrial processing plants throughout the world, constitute one of the major product lines of KITZ Corporation, Japan's largest manufacturer of industrial valves.

KITZ stainless and high alloy steel valves are designed, manufactured, and inspected to strictly conform with the requirements of ASTM, ASME, API, BS, JIS and other internationally recognized standards, with all quality elements meeting the critical service conditions needed for corrosive industrial applications.

KITZ stainless and high alloy steel valves are characterized by unsurpassed corrosion resistance and reliability, providing users with the lowest cost of ownership and the longest total life cycle performance in the industry. As an ISO 9001 certified valve manufacturer, KITZ Corporation has achieved a high degree of product standardization by the ideal combination of its updated technical know-how and uniquely integrated system of production adopted at its Nagasaka Plant, Yamanashi, Japan, the home of KITZ stainless and high alloy steel valves.

Electronically controlled steel foundries, multi-station transfer machining systems and state-of-the-art test and inspection facilities, are all put together at KITZ Nagasaka Plant, to ensure the quality and reliability of all products that it releases to the global market.

KITZ Nagasaka Plant, Japan

KITZ Corporation of Taiwan

KITZ Corporation of Kunshan

## Features of Austenitic Stainless Steel as Valve Material

Stainless steel is divided into three main categories depending on its chemical composition. They are martensitic stainless steel containing 13% chromium, ferritic stainless steel containing 18% chromium, and austenitic stainless steel containing 18% chromium and 8% nickel. Among them, austenitic stainless steel is widely used for both valve shells and trims, which require high pressure resistant characteristic. Martensitic stainless steel is used mainly for trims of carbon steel valves. The features and characteristics of these stainless steels are compared below:

### Features of Stainless Steel by Types

Types	Martensitic	Ferritic	Austenitic
Typical Material	AISI 410	AISI 430	ASTM CF8M/F316
Magnetization	Yes		No
Hardening by heat treatment	Yes	No	
Hardening by machining	Same as soft steel		Less
Corrosion and acid resistance	Good		Excellent
Impact resistance and elongation	Good		Excellent
Weldability	Poor	Fair	Good
Lowest service temperature	-29°C	-10°C	-269°C

As shown below, austenitic stainless steel has an excellent impact value in subzero temperature range and been almost exclusively used for cryogenic service applications. It also features higher heat resistance than carbon steel. Its tensile strength is also superior to other valve materials and its high resistance against destructive tensile load in a wide range of service temperatures is unrivaled by other valve materials. Corrosive fluid cannot generally affect these excellent mechanical properties of austenitic stainless steel.

### Compared Impact Values

### Compared Tensile Strength

### Steel Castings: Maximum Working Temperature Range

This data reflects ASTM specifications for general steel castings, and does not necessarily apply to valves made of these materials, which are subject to highly demanding service conditions as pressure containing vessels.

On the other hand, austenitic stainless steel is known as a very mild metal having no effect on the quality of the materials it comes into contact with. Line fluid is not contaminated while traveling through austenitic stainless steel pipelines. This advantages makes austenitic stainless steel valves the important fluid handling media for food, beverage and pharmaceutical processing plants. In addition, austenitic stainless steel CF8M or F316 has higher resistance to sea water erosion and is widely used for the valves installed in seawater disalination plants, offshore exploration facilities and ocean structures.

## Material Reference Chart

•Refer to assembly drawings for the actual material of each valve part.

		Characteristics	Typical Application	Equivalent
UNS-No.	JIS			
S41500	—	Higher corrosion resistance and weldability than other martensitic stainless steel with Ni and Mo	Oil well and oil refining	—
S30400	SUS304	Superior corrosion resistance to nitric acid, phosphoric acid and organic acid Inferior resistance to sulfuric acid	Pulp and paper mills, chemical processes, and seawater service	—
S30403	SUS304L	Higher intergranular corrosion resistance than CF8		—
S31600	SUS316	Higher pitting corrosion resistance than CF8		—
S31603	SUS316L	Higher intergranular corrosion resistance than CF8M		—
S34700	SUS347	Higher intergranular corrosion resistance than CF8 with carbide stabilized with Nb		—
S31700	SUS317	Higher pitting and crevice corrosion resistance than CF8M	Power generation, seawater service, and oil pipelines	—
S31703	SUS317L			—
—	—	Superior corrosion resistance to nitric acid of any concentration and under fuming nitric acid environment	Nitric acid production processes	NAR-SN-1
N08020	—	Superior corrosion resistance to sulfuric acid of any concentration up to 60°C and lower, and to heated dilute oxide	Chemical processes handling acetic acid, alkali, dilute hydrochloric acid, dilute hydrofluoric acid, dilute fluorosilic acid and phosphoric acid, also for oil refining	—
—	—			—
S31008	SUS310S	Used for media with higher temperature oxidizability and alkalinity	Chemical processes	—
N08800	NCF800	Superior mechanical strength at high temperature and resistance to carburizing with stabilized structure to be used for long duration; also superior corrosion resistance under humid environment	Petrochemical and carburizing processes	Incoloy alloy 800
N08367	SUS836L	The most superior acid and alkali resistance among all austenitic stainless steel and superior pitting and crevice corrosion resistance to chloride solution such as seawater	Chemical processes for highly concentrated chloride, flue gas desulfurization, acid and alkali reactor, salt manufacturing processes and seawater desalination	AL-6XN
—	—			—
S31254	—			254SMO
S32205	SUS329J3L	Superior stress corrosion cracking resistance and pitting corrosion resistance under chloride environment of middle concentration; also superior general corrosion resistance under the environment of dilute sulfuric acid and phosphoric acid	Pulp and paper mills, chemical processes, and seawater service	SAF 2205
—	—			DP3N
S32750	SUS329J4L	Higher stress corrosion cracking resistance than austenitic stainless steel, higher weldability than ferritic stainless steel and higher acid, pitting and crevice corrosion resistance than CF3M with higher mechanical strength	Salt manufacturing processes, seawater desalination, and seawater service under chloride environment and dilute sulfuric acid, phosphoric acid, formic acid, acetic acid, and urea production under acid environment; also for chemical processes, flue gas desulfurization, and waste fluid concentration	—
S32760	—			DP3W, SAF 2507
S32750	—			—
N04400	—	Superior corrosion resistance under reducing environment, no local corrosion and stress corrosion cracking resistance	Chemical processes handling alkali chloride and boiled acid, also for oil refining	Monel alloy 400
N06600	NCF600	Superior corrosion resistance to pure water, alkali and high temperature oxidation; also resistant to stress corrosion cracking by Cl ions	Chemical and food processes	Inconel alloy 600
N10001	NM1B	Resistance to hydrochloric acid of any concentration up to boiling point, resistant to reducing chloride such as sulfuric acid (up to 60%), phosphoric acid and copper chloride, resistant to high temperature but not suitable under highly oxidizing environment	Corrosion resistant processes handling chlorine, sulfuric acid, phosphoric acid, acetic acid and hydrogen chloride gas, also for processes handling chloride with high concentration at high temperature	Hastelloy alloy B
N10665	NM2B			Hastelloy alloy B2
(N10276, N10002)	NMCRB	Superior resistance under oxidizing and reducing environment, such as wet chlorine gas and chlorine dioxide; also resistance to organic acid and chloride such as acetic acid and seawater	Processes handling oxidizing acid, formic acid, acetic anhydride and seawater, also for chemical processes handling fluoride. Most suitable for flue gas desulfurization equipment	Hastelloy alloy C276
N06022	—			Hastelloy alloy C22
N06625	NCF625	Superior corrosion resistance under oxidizing and high temperature environment and superior erosion resistance	Chemical processes in general	Inconel alloy 625
N08825	NCF825	Superior corrosion resistance to sulfuric acid and phosphoric acid; also resistance to stress corrosion cracking and crevice corrosion	Chemical processes in general	Incoloy alloy 825
N02200	—	Superior corrosion resistance to alkali hydroxide solution, such as sodium hydroxide and potassium hydroxide, and to fused alkali	Chemical processes in general	Alloy 200

Note: The above materials are applicable to valve shells. Contact KITZ Corporation for other valve component materials.

\*Actual pressure-temperature rating in service depends on the materials of gland packing and gasket chosen for valves.

## Bonnet Gasket Materials

Depending on class ratings and servicing conditions, following gasket materials are available\* for body/bonnet flange gaskets of KITZ stainless and high alloy steel valves. Specify your gasket material in your purchase order.

Series	Class	Material	Maximum Service Temperature
A, D	10K, 20K, 150, 300	Ceramics PTFE	200°C
		Stainless Foil Inserted Flexible Graphite	400°C
	600	PTFE Spiral Wound	300°C
		Flexible Graphite Spiral Wound	450°C
HA	150	Ceramics PTFE	200°C
		Stainless Foil Inserted Flexible Graphite	400°C
	300	PTFE Spiral Wound	260°C
		Flexible Graphite Spiral Wound	450°C
C	150	Ceramics PTFE	200°C
		Stainless Foil Inserted Flexible Graphite	400°C
	300	PTFE Spiral Wound	300°C
		Non-Asbestos Spiral Wound	450°C
		Flexible Graphite Spiral Wound	450°C
		Stainless Steel (Ring Joint)	500°C
600, 900, 1500	Reinforced PTFE	180°C	
B	5K, 10K	Flexible Graphite	400°C
AJ	10K, 150 20K, 300	Flexible Graphite	400°C

Note: Refer to Page 15 for bonnet gaskets used for KITZ low emission service valves.

## Gland Packing Materials

Following packing materials can be chosen for KITZ stainless and high alloy steel valves, depending on service conditions, or market requirements. Specify your packing material in your purchase order.

Series	Class	Material	Maximum Service Temperature
A, D	10K, 20K 150, 300, 600	Flexible Graphite + PTFE Braided Packing	300°C
		PTFE Cup & Cone	150°C
		Flexible Graphite	500°C
		Carbon Core + PTFE Braided Packing	260°C
HA	150, 300	Flexible Graphite	500°C
		Carbon Core + PTFE Braided Packing	260°C
C	150, 300	Flexible Graphite + PTFE Braided Packing	300°C
		Flexible Graphite	500°C
	600, 900, 1500	Flexible Graphite	500°C
B	5K, 10K, Type200	Plastic Graphite Packing	180°C
AJ	10K, 150 20K, 300	Flexible Graphite + PTFE Braided Packing	300°C

Note: Refer to Page 15 for gland packing sets used for KITZ low emission service valves. \*455°C (850°F) for oxidizing atmosphere.

Contact KITZ Corporation or your KITZ distributors for optional requirement of gasket or gland packing materials other than listed above.

## Disc Construction

Series	Nominal Pressure	Solid Wedge	Flexible Wedge
A	10K/20K, Class 150/300/600	—	All sizes
HA	Class 150/300	—	All sizes
C	Class 150/300	4 and smaller	6 and larger
	Class 600	1½ and smaller	2 and larger
	Class 900/1500	—	All sizes
B	5K/10K/20K, Type 200	All sizes	—
D	Class 150/300/600	—	All sizes
AJ	10K/20K, Class 150/300	—	All sizes

## Pressure-Temperature Ratings for Series B (KITZ Standard)

Temperature	MPa		
	W 120°C below	G1 150°C below	G2 180°C below
5K	0.7	0.5	—
10K	1.4	1.1	1.0
20K	2.0	1.2	1.0

W: Static water without pressure variation  
 G1, G2: Steam, air, non-flammable gas and oil (lubricant and machining oil)  
 Note: Actual pressure-temperature rating in service depends on the materials of gland packing and gasket chosen for valves.

Pressure Temperature Ratings for Globe Valves with A series disc

## Usage Range of Bellows Seal Globe Valves

### ● Pressure-Temperature Ratings

Although valve bodies are designed to comply with the pressure and temperature standard of JIS B 2220/ASME B16.34, pressure and durability of bellows should be considered. If you are using products beyond this usage range, please contact us. The standard may not be applicable depending on the fluid state.

### ● Relation between Pressure and Service Duration

The value shown below which was obtained by the bellows valve durability test indicates the repeated opening and closing durability. If you need a longer product usage, please consult us. (Conforming to MSS SP 117)

Class		1500																				
Service Temperature		CF8**2 [SCS13A]			CF8M**2 [SCS14A]			CF3M-CF3**3 [SCS16A-SCS19A]			CF8C**2 [SCS21]			CK20**2 [SCS18]			CN7M [SCS23]			SDPV**4 SASV**5

## Sand Molds for Stainless Steel Valve Castings

### Silica Sand

### Chromite Sand

Unlike its competitors, KITZ Corporation employs casting molds made of mixture of chromite sand and silica sand at its Nagasaki stainless and high alloy steel foundries, instead of 100% silica sand which is rather common in the industry. The specific gravity of chromite sand is twice as much as that of silica sand and loading 1.5 MPa (210 psi) surface pressure during molding enables uncomparably solid, hard and uniform structure of casting molds with high precision.

**Mold Sands: Cooling Effect**

Much higher cooling effect of chromite sand solidifies the molten metal faster to result in very sound castings without concern of blowholes and other casting defects.

**Mold Sands: Decarbonization**

Chromite sand decarbonizes the surface area of stainless steel castings much better so that fine casting surface and high corrosion resistance are guaranteed.

**KITZ Low Emission Service Valves**

In the United States, the Federal Clean Air Act was dramatically amended in 1990, to realize the new environmental protection policy of 95% reduction in fugitive emission or leak levels of toxic gases and chemicals from plant equipment. Promulgated in April, 1994, the new law requires all plants handling the toxic gas specified by the Environmental Protection Agency, to periodically monitor their plant equipment for detection of leaks exceeding 500 ppm, and repair or replace all defective parts immediately. California has exceeded the Federal law with state regulation requiring 100 ppm maximum leak level for astonishing 99% reduction of such an environmental pollution for the Northern California Region after 1997.

Our low emission valves, the proud fruits of several years of trial and error at our laboratory, are designed, engineered, manufactured and tested to now meet the 100 ppm maximum emission level. This is the standard specification in North America for KITZ Class 150, 300 and 600 Series A and C stainless and high alloy steel valves. In other markets, all these low emission valves are optionally available. Major design considerations for having upgraded our standard valves to the low emission performers are introduced below.

**Gland packing**

Series A: Choice of PTFE or flexible graphite packing.

- (1) Braided PTFE fiber packing with spun carbon core
- (2) KITZ's original "SEALEVER®" packing set consisting of 4 dieformed flexible graphite rings\* and 2 braided flexible graphite wiper rings with a pure carbon spacer bush for Class 300 and 600.

Series HA:

- (1) Braided PTFE fiber packing with spun carbon core
- (2) KITZ's original "SEALEVER®" packing set consisting of 4 dieformed flexible graphite rings\* and 2 braided flexible graphite wiper rings with a pure carbon spacer bush for Class 300.

Series C: KITZ's original "SEALEVER®" graphite packing set with a pure carbon spacer bush for Class 300 and 600.

\*US Patent No.5522603 & 5573253. Other patents registered or pending worldwide.

**Bonnet gaskets and check valve cover gaskets**

Series A: Choice of PTFE or flexible graphite gasket.

- (1) Class 150: Reinforced PTFE, Class 300: PTFE filled spiral wound with inner ring. Class 600: PTFE filled spiral wound
- (2) Class 150: S/S inserted flexible graphite sheet designed with permeation protective barrier  
Class 300: Spiral wound flexible graphite with inner ring. Class 600: Spiral wound flexible graphite

Series HA: Choice of PTFE or flexible graphite gasket.

- (1) Class 150: Reinforced PTFE, Class 300: PTFE filled spiral wound with inner ring.
- (2) Class 150: S/S inserted flexible graphite sheet designed with permeation protective barrier, corrugated metal flexible graphite (6B OVER).  
Class 300: Spiral wound flexible graphite with inner ring.

Series C:

- Class 150: Flexible graphite sheet with stainless steel insert and permeation protective barrier for low emission service.  
Class 300: Spiral wound (flexible graphite filler and stainless steel hoop) with a stainless steel inner ring  
Class 600: Ring joint metal gasket

**Diametrical interface clearance**

- 20 to 32 mils (0.5 to 0.8 mm): Stem to gland
- 20 to 32 mils (0.5 to 0.8 mm): Stem to bonnet bushing (Series C)
- 16 to 28 mils (0.4 to 0.7 mm): Stem to backseat (Series A, HA)
- 4 to 12 mils (0.1 to 0.3 mm): Gland to stuffing box

**Stem**

16 to 32 RMS surface finish. Straightness and roundness are precisely controlled according to KITZ design and manufacturing standards.

**Stuffing box**

Maximum 125 RMS surface finish. Cylindricity and verticality are precisely controlled according to KITZ design and manufacturing standards.

**Product identification**

Stainless steel ID plate with the letters "LOW EMISSION" in orange is welded on the bonnet flange.

**Inspection and Warranty Policy of KITZ Corporation**

Every piece of KITZ stainless and high alloy steel valves is subjected to 100% pressure tests, according to API 598 or BS 6755 Part 1 requirements. Manufacturer's material test reports and inspection certificates are available on your request, while each valve is guaranteed for 12 months after placement in service, but not exceeding 18 months after shipment from the factories of KITZ Corporation.

Various tests and inspection of valves made by KITZ Corporation include the following. Unless otherwise specified, all KITZ stainless and high alloy steel valves shall be subjected to these testing or inspection methods and evaluation criteria.

Test/Inspection Item	Method	Evaluation
Chemical composition analysis		Relevant ASTM Stds.
Mechanical property test	ASTM A370	Relevant ASTM Stds.
Pressure tests	API 598 or BS 6755 Part 1	API 598
Radiographic inspection	ASTM E186/280/446	ASME B16.34
Wet magnetic particle inspection	ASTM E709	
Liquid penetrant inspection	ASTM E165	
Low temperature impact test	ASTM E23	ASTM A352
Dimensional inspection		Relevant Valve Stds.
Visual inspection		MSS SP-55
Emission test*	EPA Method 21 and KITZ Std.	KITZ Std.

\*Applicable to low emission service valves

**KITZ Low Temperature and Cryogenic Service Valves**

KITZ Corporation offers Series A and C stainless steel gate, globe and check valves for processing, storage, shipment and distribution of ethylene, LPG, LNG and other low temperature or cryogenic services down to  $-196^{\circ}\text{C}$  ( $-321^{\circ}\text{F}$ ). Here, extended bonnets are provided as an insulation vapor column to protect gland packing rings from freezing or shrinking for their trouble-free sealing function. Detailed design information and cryogenic test reports are available on request.

Please refer to our "Low Temperature and Cryogenic Valves" catalog. (No. E-426)

KITZ cryogenic service gate valve

### Cautionary Note Regarding Installation of Socket Welding Joints

To prevent problems in the cracking of the fillet welds when the pipe is seated against the bottom of the socket prior to welding, it is recommended that the pipe be withdrawn approximately 0.06 inch (1.6 mm) away from contact with the bottom of the socket before starting the weld.

Valves should be welded with the disc slightly opened, using weld material (rod or wire) with an appropriate diameter to meet the dimension and shape of the area to be welded, for prevention of overheating valves.

## CLASS 300 JACKETED LIFT CHECK VALVE

Pressure-Temperature Rating:  
ASME B16.34

300UNAJ

300UNAJM

### Materials

Parts	300UNAJ	300UNAJM
Body	CF8	CF8M
Cover	CF8	CF8M
Disc	304SS	316SS
Gasket	Refer to Page 10	
Cover bolt/nut	B8/8	
Jacket*	Carbon steel	

\*The material may be changed depending on the service temperature.  
Note: Body seats and/or disc seats can be optionally hard-faced.

Items	
Face to face dimensions	KITZ Std.
End flange dimensions	ASME B16.5 Class 300
Wall thickness	ASME B16.34 Class 300

Nominal Size	1/2 x 1 1/2		3/4 x 1 1/2		1 x 2		1 1/2 x 2 1/2	
	15 x 40		20 x 40		25 x 50		40 x 65	
L	in.	6.50	6.50	7.99	9.02			
	mm	165	165	203	229			
H	in.	3.07	2.99	3.03	4.02			
	mm	78	76	77	102			
P		Rc 1/2	Rc 1/2	Rc 1/2	Rc 1/2

\*The nominal sizes are indicated by [the valve nominal sizes] and [flange nominal sizes].

## Care for Handling Valves

### 1. Before installing valves:

Before installing valves, be sure that adequate valves have been prepared to exactly meet the service conditions including the maximum design pressure and temperature. Foreign objects such as sand or scale may be left in the pipes, and care should be taken to remove all of them by filters or strainers to protect valves seat surfaces during subsequent valve commissioning.

### 2. Installing valves:

On mounting valves, clean the inside of pipes again so that no welding spatters, chips, scale or sand are left. For installation of flanged end valves, flange bolts should be tightened alternately in a star pattern. Where extraordinary external forces such as piping stress may be applied to the flanges of valve being installed, provide valve supports or any other adequate protective measures.

Check body/bonnet bolting during installation, stress relaxation of fasteners can occur during transit and storage.

Lubricate stem and yoke sleeve prior to valve operation. KITZ valves are shipped from the factory with only a little lubricant which facilitates assembly.

For socket welding works, refer to Pages 48, 49 of this catalog.

### 3. Retightening valves glands:

When leakage is detected from the gland area while the valve is being in service, the gland should be immediately retightened. Tighten the gland slowly and gradually until the leakage stops, while rotating the valve handwheel. In case the valve operating torque has been found considerably increased after these procedures, it is recommended to replace all packing rings at the time of valve maintenance.

### 4. Replacing packing rings:

It is recommended to replace packing rings during valve maintenance operation, but never while the valve is being pressurized in service, except the line pressure is reduced to the atmospheric level. KITZ stainless steel valves (Series A, HA, AJ, C and D) are provided with the backseats or bonnet bushes. If leakage from the gland area cannot be stopped by retightening the gland, operate the valve to its full open position and add a few packing rings or replace packing rings utilizing sealing function of these backseats.

Sealing function of backseats is sometimes disturbed due to rust or other foreign objects trapped inside. It should be carefully checked before adding or replacing packing rings that backseats function properly. When the valve is highly pressurized, it sometimes causes danger to replace all of packing rings. In this case, adding a few new rings or replacing a few rings on top of the packing chamber is recommended as a first aid solution.

For replacement of packing rings, first remove the gland bolts and then packing rings. Clean the packing chamber and the valve stem. After checking that all sliding parts are in good condition, securely install new packing rings. Press new packing rings lightly a few times with the gland and then evenly tighten the gland.

### KITZ Protect Warranty

All KITZ stainless and high alloy steel valves are guaranteed for 12 months after placement in service, but not exceeding 18 months after shipment from the factories of KITZ Corporation, provided that the valves are properly handled according to the relevant KITZ operation manual.

### DISCLAIMER

- KITZ does not take any responsibilities for damages arising from a result of natural disasters, accidents or fire which KITZ is not liable for, conduct of a third party, intentional act, misuse or use under abnormal conditions by a customer.
- KITZ does not take any responsibilities for damages arising from negligence of the prohibitions and cautions given in the catalogs and operation manuals, or installation and usage beyond the specification range.
- KITZ does not take any responsibilities for damages arising from product modification not entrusted to KITZ or usage under the load applied from other devices.

## CAUTION

Pressure-temperature ratings and other performance data published in this catalog have been developed from our design calculation, in-house testing, field reports provided by our customers and/or published official standards or specifications. They are good only to cover typical applications as a general guideline to users of KITZ products introduced in this catalog.

For any specific application, users are kindly requested to contact KITZ Corporation for technical advice, or to carry out their own study and evaluation for proving the suitability of these products to such an application. Failure to follow this request could result in property damage and/or personal injury, for which we shall not be liable.

While this catalog has been compiled with the utmost care, we assume no responsibility for errors, impropriety, or inadequacy. Any information provided in this catalog is subject to from-time-to-time change without notice for error rectification, product discontinuation, design modification, new product introduction, or any other cause that KITZ Corporation considers necessary. This edition cancels all previous issues.

Read the instruction manual carefully before use.

## NOTICE

If any products designated as strategic material in the Foreign Exchange and Foreign Trade Law, Cabinet Order Concerning Control of Export Trade, Cabinet Order Concerning Control of Foreign Exchange, and other related laws and ordinances ("Foreign Exchange Laws") are exported to any foreign country or countries, an export license issued by the Japanese Government will be required under the Foreign Exchange Laws.

Further, there may be cases where an export license issued by the government of the United States or other country will be required under the applicable export-related laws and ordinances in such relevant countries.

The contract shall become effective subject to the fact that a relevant export license is obtained from the Japanese Government.
