

CompTIA SecurityX (CAS-005)

Course Overview

The SecurityX Certification is an advanced skill level cybersecurity certification designed for professionals with 10 years of general hands-on IT experience, with at least five of those years being broad hands-on IT security experience.

This course can benefit you in two ways. If you intend to pass the CompTIA SecurityX (ExamCAS-005) certification examination, this course can be a significant part of your preparation. However, certification is not the only key to professional success in the field of cybersecurity. Today's job market demands individuals have demonstrable skills, and the information and activities in this course can help you build your information security skill set so that you can confidently perform your duties as an advanced security practitioner.

Upon course completion, you will be able to:

- Summarize governance, risk, and compliance.
- Implement architecture and design.
- Understand security engineering.
- Apply security operations and incident response.

The SecurityX is compliant with ISO/ANSI 17024 standards and approved by the U.S. DoD to meet Directive 8140.03M requirements. CompTIA SecurityX (formerly CASP+) maps to 19 NICE work roles and 19 DoD Cyber Work Force (DCWF) work roles used in the DoD 8140.03 manual.

Course Prerequisites

Recommended Experience: Minimum 10 years general hands-on IT experience, 5 years being hands-on security, with Network+, Security+, CySA+, Cloud+ and PenTest+ or equivalent knowledge.

SecurityX

Table of Contents

- 1.0 Preassessment
- 2.0 Summarizing Governance, Risk, and Compliance
 - 2.1 Implement Appropriate Governance Components
 - 2.2 Explain Legal Compliance
 - 2.3 Apply Risk Management Strategies
- 3.0 Implementing Architecture and Design
 - 3.1 Apply Software Development
 - 3.2 Integrate Software Architecture
 - 3.3 Support Operational Resilience
 - 3.4 Implement Cloud Infrastructure
 - 3.5 Integrate Zero Trust Concepts
 - 3.6 Troubleshoot using AAA and IAM
- 4.0 Understanding Security Engineering
 - 4.1 Enhance Endpoint Security
 - 4.2 Configure Network Infrastructure
 - 4.3 Initiate Security Automation
 - 4.4 Apply Cryptography Concepts
- 5.0 Applying Security Operations and Incident Response
 - 5.1 Perform Threat Modeling
 - 5.2 Examine Security Monitoring
 - 5.3 Analyze Known Attack Methods and Associated Mitigations
 - 5.4 Apply Threat Hunting Tools and Technologies
 - 5.5 Evaluate Incident Analysis and Response
