

SAS® Platform Administration: Hands-on Troubleshooting of SAS® 9.4

Course Description

This course teaches the fundamentals of debugging some common platform administration issues in SAS 9. Though not exhaustive, the errors introduced in this course are designed to test and develop your debugging skills.

Learn how to

- Access SAS Management Console and SAS Environment Manager to administer the environment.
- Troubleshoot a failed SAS backup of your environment.
- Set up a properly defined metadata account.
- Modify an expired service account.

Course Prerequisites

Before attending this course, you should complete the SAS9 Administration Fast Track course or have equivalent experience.

Who Should Attend?

SAS Platform administrators
