Lean IT Leadership

EXAM BODY

APMG

COURSE DESCRIPTION

In any discussion of implementing Lean principles within organizations, the importance of leadership cannot be overstated. Effective leadership is key to the success of the initiative, while lack of leadership can lead to failure.

While there are numerous publications on leadership, few focus specifically on Lean and facilitative leadership. This Lean IT Leadership course aims to fill this gap by combining published ideas on leadership, Lean leadership, and leadership with practical experience from Lean IT practitioners. The result is a well-rounded view of Lean leadership within an organization.

This course is ideal for managers and professionals who aspire to lead their organization's transformation into a Lean organization. By providing insights into Lean principles and leadership, this course equips learners with the knowledge and skills needed to effectively lead change within their organization.

COURSE APPROACH

The Lean IT Leadership is a three-day course. It will give an in-depth look at the key elements on Lean Leadership. Starting with the core concepts of Lean Leadership, followed by the Leadership Developments Model and then self-development, developing others, building teams, creating a vision, practicing lean leadership, changing the organization, and exam preparation.

The course is a mixture of learning the concepts of Lean IT Leadership and discussion about how to make these concepts practical to you as a leader in your organizational context. Additionally, we will use the A3 method to record and communicate your personal challenges in growing toward Lean IT Leadership.

This course is aimed at understanding Lean IT Leadership, the impact on you as a leader and your role in developing other leaders in your organization.

EMPOWERING PROFESSIONALS

As MindMachine, we have trained more than 60,000 professionals over Asia and Oceania since 2001.

Our focus in our training is to empower our participants by balancing practical experience and the theoretical background. The participants walk away with knowledge to apply the learnings and the theoretical background to successfully pass the exam requirements.

Our education portfolio ranges from courses in business services and processes to IT services and processes. This portfolio has enabled us to support our clients end to end in their organizations and enable synergy throughout corporate value chains.
