

RH135

Red Hat System Administration II with exam

Focuses on the key tasks needed to become a full time Linux administrator.

Red Hat System Administration II with exam (RH135) serves as the second part of the RHCSA training track for IT professionals who have taken [Red Hat System Administration I \(RH124\)](#). The course goes deeper into core Linux system administration skills in storage configuration and management, installation and deployment of Red Hat® Enterprise Linux®, management of security features such as SELinux, control of recurring system tasks, management of the boot process and troubleshooting, basic system tuning, and command-line automation and productivity.

Experienced Linux administrators looking for rapid preparation for the RHCSA certification should instead start with [RHCSA Rapid Track \(RH199\)](#).

The [Red Hat Certified System Administrator \(RHCSA\) exam \(EX200\)](#) is included in this offering, which is based on Red Hat Enterprise Linux 9.0.

Course content summary

- Install Red Hat Enterprise Linux using scalable methods
- Access security files, file systems, and networks
- Execute shell scripting and automation techniques
- Manage storage devices, logical volumes, and file systems
- Manage security and system access
- Control the boot process and system services
- Run containers

Audience for this course

This course is geared toward Windows system administrators, network administrators, and other system administrators who are interested in supplementing current skills or backstopping other team members, in addition to Linux system administrators who are responsible for these tasks:

- Configuring, installing, upgrading, and maintaining Linux systems using established standards and procedures
- Providing operational support
- Managing systems for monitoring system performance and availability
- Writing and deploying scripts for task automation and system administration

Prerequisites for this course

- Successful completion of [Red Hat System Administration I \(RH124\)](#) is recommended.
- Experienced Linux administrators seeking to accelerate their path toward becoming a Red Hat Certified System Administrator should start with the [RHCSA Rapid Track course \(RH199\)](#).

Outline for this course

- **Improve command line productivity**
Run commands more efficiently by using advanced features of the Bash shell, shell scripts, and various utilities provided by Red Hat Enterprise Linux.
- **Schedule future tasks**
Schedule commands to run in the future, either one time or on a repeating schedule.
- **Tune system performance**
Improve system performance by setting tuning parameters and adjusting scheduling priority of processes.
- **Manage SELinux security**
Protect and manage the security of a server by using SELinux.
- **Manage logical volumes**
Create and manage logical volumes containing file systems and swap spaces from the command line.
- **Access network-attached storage**
Use the NFS protocol to administer network-attached storage.
- **Control the boot process**
Manage the boot process to control services offered and to troubleshoot and repair problems.
- **Manage network security**
Control network connections to services using the system firewall and SELinux rules.
- **Install Red Hat Enterprise Linux**
Install Red Hat Enterprise Linux on servers and virtual machines.
- **Run Containers**
Obtain, run, and manage simple, lightweight services as containers on a single Red Hat Enterprise Linux server.

Impact of this training

As a result of completing this offering, you should be able to perform and validate the key tasks needed to become a full-time Linux administrator. You will be introduced to more advanced administrative topics, such as storage management using LVM, SELinux management, and automated installation. This offering goes deeper into enterprise Linux administration, including file systems and partitioning, logical volumes, SELinux, firewall configuration, and troubleshooting.
