

Like or even more than the human eye

Vision System

FH Series

- A complete line-up of cameras for various applications
- Powerful controllers for fast and precise inspection and measurement
- Software for easy setting of various measurements

Best-in class image sensing speed and precision - like or even more than the human eye

Omron has packed image sensing technology for inspection and measurement necessary for automation into compact devices. The FH Series includes software for inspection and measurement in addition to cameras that can capture high-sensitivity and high-resolution images. This vision system, substituted for the human eye, provides high-speed and high-precision inspection and measurement without complex programming and device combination.

Vision System

FH Series

A complete line-up of cameras for various applications

NEW Rolling Shutter Camera
FH-SC05R/SM05R

**Powerful controllers
for fast and precise
inspection and
measurement**

NEW Advanced functionality in a compact size
FH-L550/L550-C10

Software for easy setting of various measurements

A complete line-up of cameras for various applications

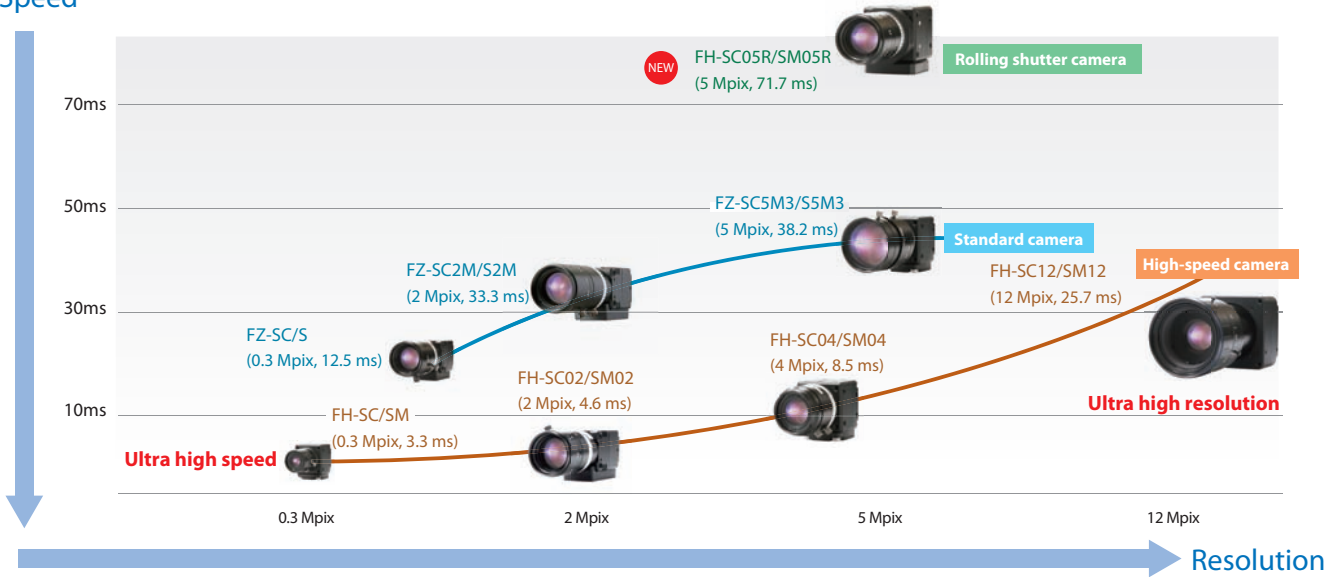

For applications requiring high speed and high resolution

Lens mount camera

You can select the best combination of camera and lens for your application.

Speed

Rolling shutter camera added to the line-up

The benefits of cost-effective rolling shutter cameras are now being recognized once again.

The rolling shutter camera scans the pixels of each line. Although this produces distortions of moving objects, high-resolution yet cost-effective inspection and measurement can be performed.

| | Rolling shutter | Global shutter |
|--------------------------|-----------------|----------------|
| Stationary object | | |
| Moving object | | |

Easy to install into machines

Camera with built-in light

The all-in-one camera including the light and lens can be easily integrated into almost any machine.

* The FQ2 Smart Cameras are also available.

High-power lighting

The sensor has a built-in high-power light capable of evenly lighting across a wide field of view.

This provides sufficient lighting even when the enclosed polarizing filter is used.

Adjustable lens

The focus of the lens can be adjusted to take clear images for the specific field of view and installation distance you need.

For narrow space

Small camera

The ultra-compact lens can be installed into limited space in a machine. Select the flat or pen type depending on space.

Flat type
FZ-SF(C)

Pen type
FZ-SP(C)

This is the size with nothing other than a lens (FZ-LES3).

Powerful controllers for fast and precise inspection and measurement

You can select the best controller to suit requirements.
All controllers can share the same settings, bringing flexibility to machine design.

| | FH-3050 Series | FH-1050 Series | FH-L550 Series |
|----------------------------|--|--|---|

Image transfer without delay

The FH-3050/-1050 Series has a high-performance bus to transfer images, maximizing the specifications of any connected camera.

Note: The image conversion processing time is not included.

The FH-3050/-1050 Series can transfer large amounts of image data in real time.

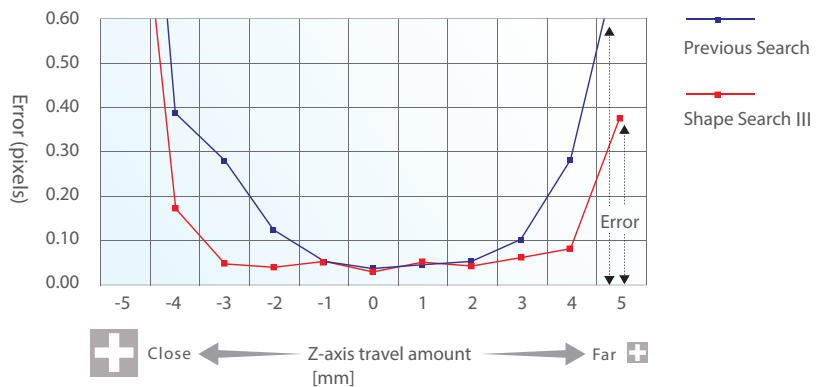

Object detection algorithm Shape Search III for fast and precise inspection and measurement

High-precision object detection

Low-error position detection even with blurry images

Over many years, Omron has perfected techniques to search for and match templates at high speed. This experience and expertise enables us to develop the Shape Search III vision algorithm, which provides advanced robustness and is critical on FA sites. When measuring lamination of glass or other processes where the distance to the workpiece from the camera varies, size differences and focal shifts can occur. Even in cases like this, the new Shape Search III algorithm detects positions with limited error.

Stable searching with limited error even under adverse conditions

Stable searching is possible even under the following adverse conditions, which occur far too often in actual measurement applications.

Detection of multiple workpieces

Even if many workpieces are within the field of view, searching is possible without compromising detection accuracy.

The different types of the searched workpieces can be classified.

Detection of workpieces from background noise and detection of shiny workpieces

Stable searching is possible without being affected by the background or glass.

What is Think & See?

Powerful core technologies for image sensing. Omron is continuously developing technologies to measure, detect, or identify the positions, orientations, shapes, materials, colors, status, or attributes of things, people, vehicles, or other objects faster, more precisely, and more easily than the human eye under various conditions.

Shape Search III is based on the Think & See technology.

See the details of Think & See.

<http://www.omron.com/technology/core/thinkAndSee/>

Ultra-high-speed searching 9 times faster than before

New technology makes search algorithms up to nine times faster than before. Even for unstable image conditions (including light interference, overlapping shapes, gloss, and incomplete images), stable searching is now possible without reducing speed.

Ultra-high-speed search processing time

Visualization of comparisons enables easy setting of high-precision searching Patent Pending

Advanced searching is accompanied by many parameters that must be tuned to match the application. However, it is difficult for the person making the settings to see the internal process. Normally, a lot of time and effort is required to maximize tool performance. But with Shape Search III, you can visualize comparisons between the model data and a part of the measurement object to easily see when comparisons are not optimally matched. Visualization of the comparison level allows for parameters to be adjusted to quickly obtain the best performance.

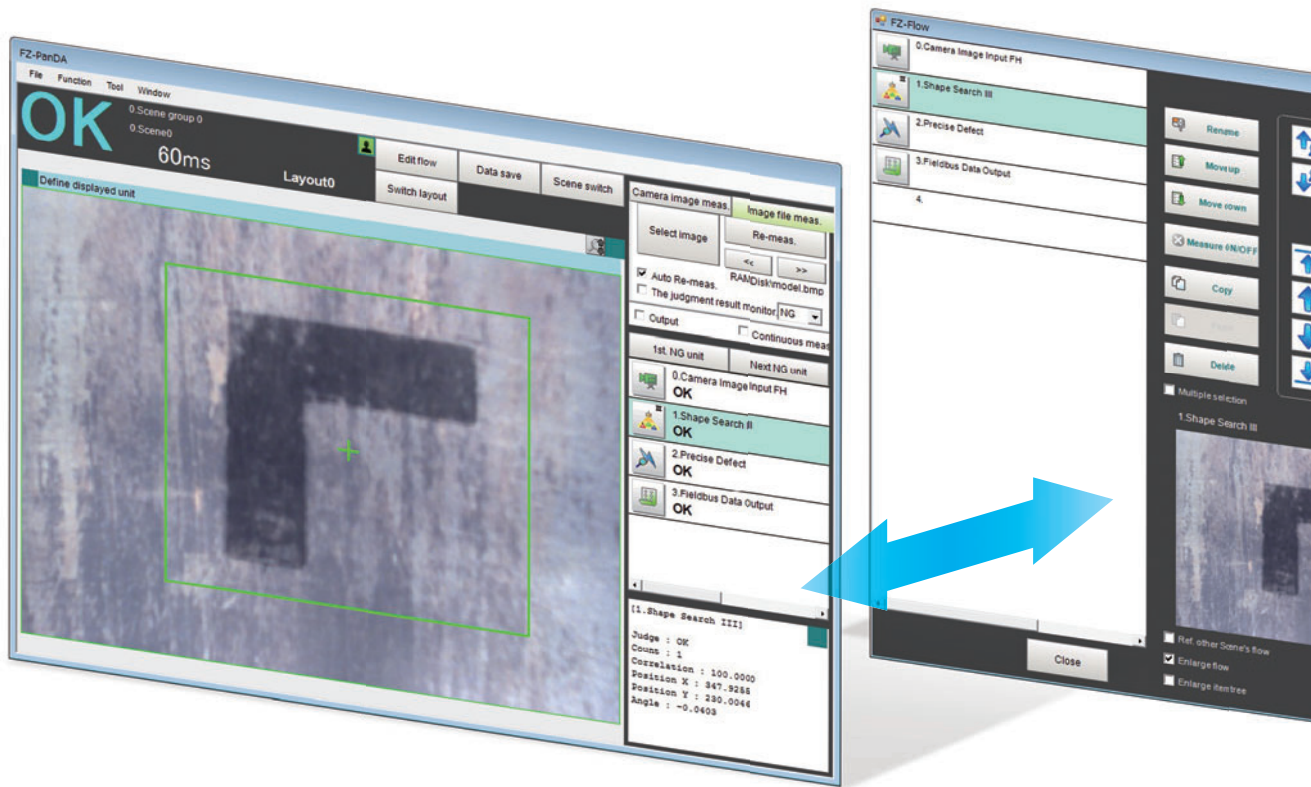

You can adjust a parameter called the Acceptable Distortion Level to enable measurements without reducing the correlation even if there is distortion. You can easily adjust this parameter while monitoring the comparison.

Preinstalled GUIs - for designers and for operators

GUI for operators

Operation interfaces are preinstalled in the FH Series. You can display operation interfaces just by switching screens, without time-consuming interface development work.

Operation screen

Choose any of nine languages

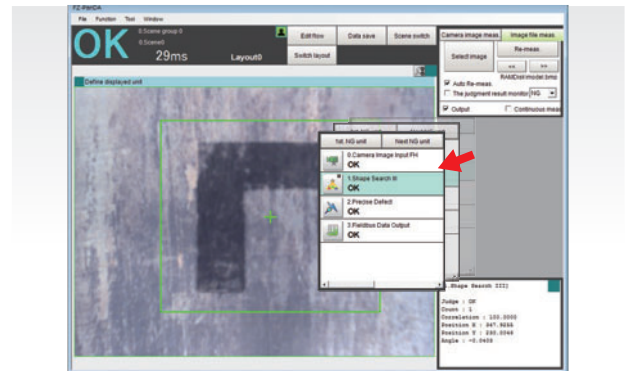

You can change display messages between nine different languages: English, Chinese, Japanese and other languages. Display the best language for the user for applications in other countries.

Touch screen ideal for on-site operation

The IP65-certified touch screen for the FH Series is available (FH-MT12). The resistive film method allows easy operation with a gloved hand.

Easy customization of interface

You can easily customize the preinstalled interfaces just by dragging and dropping.

GUI for designers

The setting of inspection and measurement can be done by combining processing items to create a flow.
 GUI for detailed setting for measurement conditions allows intuitive operation.

More than 100 processing items

Measurement flow setting screen

Measurement condition setting screen

Inspection flow design

Drag and drop processing items to create inspection and measurement flows. Flow creation at production sites, offline flow creation, and simulations are possible.

Simple programming

User-defined macro can be used for complex data processing that cannot be performed by inspection flows. The BASIC-like programming language facilitates the macro creation.

Flexible functionalities to provide high compatibility with manufacturing machines

Remote operation via Ethernet

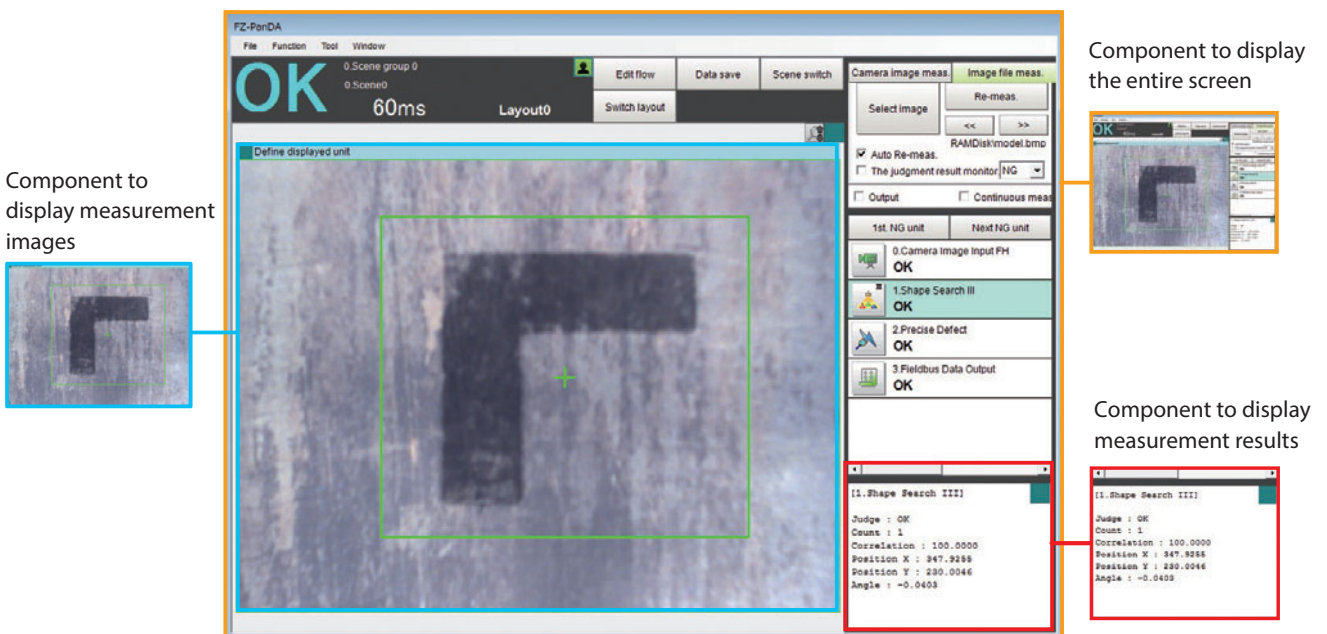

The Remote Operation Tool is provided to control the FH Series from a remote location via Ethernet. Just install the tool on your PC and specify the IP address.

Note: Ask your OMRON representative about obtaining simulation software for a computer.

Integration into user applications

Microsoft.Net software components are supported to integrate the FH interfaces into a PC-based HMI. You can add components that display FH screens and measurement results to your HMI software just by dragging and dropping.

Note: Ask your OMRON representative about the software components.

Integrated development environment

The Automation Software Sysmac Studio integrates setting and operation of the NJ/NX Machine Automation Controller and FH Series. Simulate and debug motion control, logic, drives, and sensing on an integrated platform to reduce the work required for machine design.

Vision system simulation

Inspection and measurement by vision systems can be simulated from the Sysmac Studio.

Data tracing

Inputs and outputs of vision systems can be traced as a time series.

3D Simulation

Patent Pending

Machine movement can be simulated based on measurement results of vision systems.

Software customization

The Application Producer (FH-AP1) provides a development environment that lets you customize software preinstalled in the FH Controller. Original interfaces created with Microsoft Visual Studio can be used with the FH Controller.

Develop original interfaces with Microsoft Visual Studio

Create installation files for the FH Controller with Application Producer

Install the created software on the FH Controller

High immunity against ambient light for reliable inspection

Glue bead and shape inspection application

Even workpieces with surfaces that are difficult to inspect (e.g. metal cutting surface) can be reliably inspected.

■ Inspection flow example

| | |
|--|--------------------------|
| | 0.Camera Image Input HDR |
| | 1.Iris |
| | 2.Focus |
| | 3.Image Subtraction |
| | 4.Glue Bead Inspection |

Easy to create HDR images Patent Pending

The Camera Image Input HDR processing item can create optimized HDR images under variable ambient conditions. Normally, to create a HDR image, you must set the imaging conditions for each shooting. However with the FH Series, once you specify the area to capture on the image, the vision system automatically adjusts the shutter speed while capturing images and combines the images.

Image optimized for the specified area

Optimized for the bright part

Optimized for the entire field of view

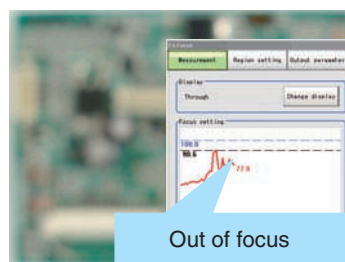

Optimized for the dark part

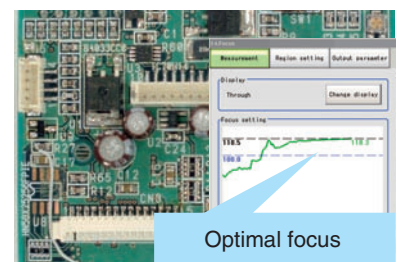

Optimum focus and aperture settings

Until now, focus and brightness settings were adjusted according to experience and intuition. But now they can be evaluated numerically and visually on graphs. This allows quick verification of optimum focus and aperture settings to eliminate inconsistencies in settings caused by worker differences so that you can achieve even higher levels of measurement accuracy.

Out of focus

Optimal focus

- Camera installation and setup are easy.
- Errors can be generated when the focus or aperture changes.
- You can determine the numerical values for the focus and aperture for the master workpiece so that essentially anyone can reproduce the same conditions.

Extraction of objects to inspect

When the complete sealing is inspected, the effects of unstable conditions can be eliminated by updating the image that is captured before applying the sealant and registered as the master. The FH Series can easily update the master image to extract the difference just by using the Image Subtraction processing item. Image Subtraction processing item.

Before application

After application

Difference

Inspection of paths and widths Patented

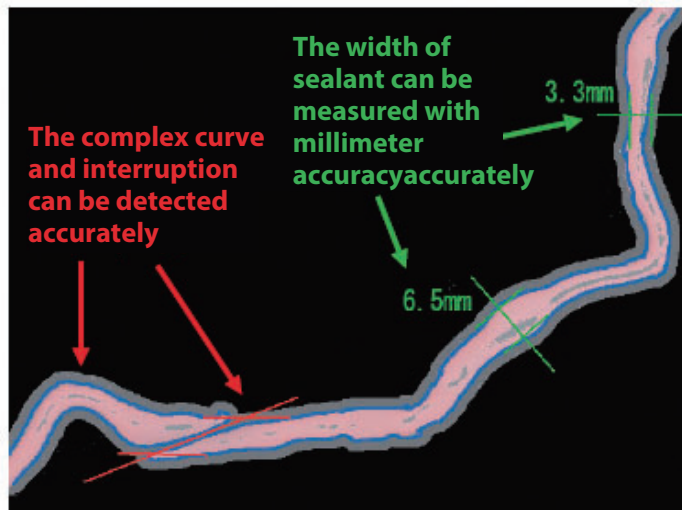

The Glue Bead Inspection processing item evaluates sealing numerically just by defining the start and end points of the object to inspect. This minimizes inconsistencies in inspection. Even complex paths can be detected accurately.

Unlike the general width inspection using edges, the profile of the object is used to inspect.

This method enables accurate inspection of complex curves and interruptions.

Original image

Parallel processing for high-speed inspection

In-line external inspection application on high-speed production lines

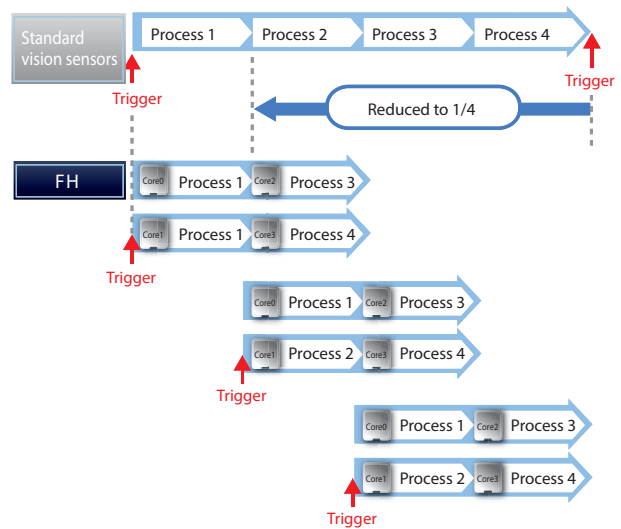

The FH Series provides various functions for in-line inspection requiring fast inspection speed.

■ Inspection flow example

Trigger interval reduced by up to 75%

Generally, when multiple inspections are performed simultaneously, the waiting time until the next inspection occurs. Parallel processing on multi-core CPU greatly speeds up inspection by eliminating waiting time.

Multi-input function Continuous high-speed image capture

Higher speed from advanced image capture and parallel measurements

Each camera has its own image buffer for storing image data. This is separate from the main memory that is used for measurement processing. This allows for up to 256 frames* of continuous high-speed image capture even when the main memory is processing measurement data.

* The number of images that can be captured depends on the controller and the camera that is connected to it. Refer to the user's manual for details.

Image creation technology to maximize inspection capability

Real Color Sensing

The FH Series features Omron's unique Real Color Sensing. High-speed processing using color information enables high-accuracy detection of edges and defects.

Color segmentation processing

Color images taken by the camera are processed after being converted into black and white pixels. Based on minimum information, high speed processing is possible. Since color data is limited only to brightness, however, it takes a long time to make optical adjustments for extracting color features.

Color image processing

Color images are converted into 256 levels of black-and-white brightness and the contrasts of specific colors are enhanced. More precise, stable results can be produced compared to color segmentation. However, this method has difficulty in capturing subtle variations in color because all colors are converted into black-and-white brightness levels. Therefore, it is difficult to detect subtle changes in images with low contrast.

Real Color Sensing

Different colors are represented as different positions in the 3D RGB space. Subtle variations in color can be recognized by representing them as distances between different color pixels comprising this space. Thus, scratches and dirt can be detected accurately even in images with low contrast.

Previous image processing

Omron FH Series

Edges are detected reliably even when the contrast between the background and subject is low.

Stripe Removal Filter II

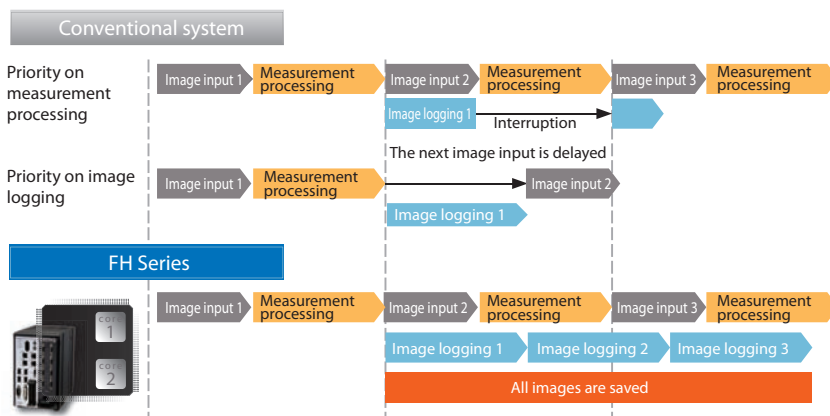

This processing item filters out the stripped pattern or other background. Reliable defect inspection can be achieved by extracting minute changes such as defects.

| External appearance of bottle cap | |
|---|--|
| Unfiltered image | Image after Stripe Removal Filter |
|  |  |
| <p>Due to the stripes, inspection is possible only in the very center of the image. To inspect the entire surface, the cap must be rotated and many images must be taken.</p> | <p>Because even the defect at the edge of the image can be detected, the number of images that is required to inspect the entire cap is greatly reduced.</p> |

Utilities

High-speed logging to save all images even during measurements

The CPU can perform parallel processing of measurements and image logging. With high-speed connection to a high-capacity (3 TB) HDD, all images on the high-speed line can be saved, which was previously difficult. Trend analysis of all saved images quickly isolates errors and facilitates countermeasures.

- *1. All images can be saved under the following conditions:
- 300,000-pixel camera x 1 unit
 - Measurement time: 20 ms
 - Images can be saved continuously for approx. 5 days when a 3 TB HDD is used (based on 8 hours of operation a day)

Issue

Since logging was not possible during measurement, the user had to choose either measurement or logging. Accordingly, not all images could be saved or image input triggers had to be delayed depending on the measurement trigger intervals.

Solution

Measurement and image logging are processed completely in parallel. As a result, you can save all images.

Robust to adverse conditions and easy to set

Track & Trace Applications

A single sensor can perform everything, from GS1 code reading to image inspection, which saves costs and space in Track & Trace application.

■ Inspection flow example

| | |
|--|--------------------------|
| | 0. Camera image input FH |
| | 1. OCR |
| | 2. Barcode |

OCR is based on the Think & See technology, Omron's image sensing technology. See the details of Think & See.

Stable reading of difficult-to-read characters

Printed characters can be too close to each other, and characters can be printed on curved surfaces. Even in these cases, stable reading is now possible.

Touching characters

Curved character strings

Easy installation with built-in dictionary

Many previous character reading methods required dictionary setup before usage, which was a tedious step. The built-in dictionary developed through Omron's long and rich experiences on FA sites includes a variety of fonts and possible character variations, eliminating the need of dictionary setup. You can also add non-conventional characters when special fonts are read.

Characters from most printers can be read, including dot and impact printers.

Approx. 80 different fonts

Hot printer

Inkjet printer

Thermal printer

Laser marker

Multi-line random processing

A single FH-3050/-1050 Controller can perform completely different inspections. Controllers installed for each inspection can be integrated into one, which reduces initial costs and save space.

Package insert detection

External inspection

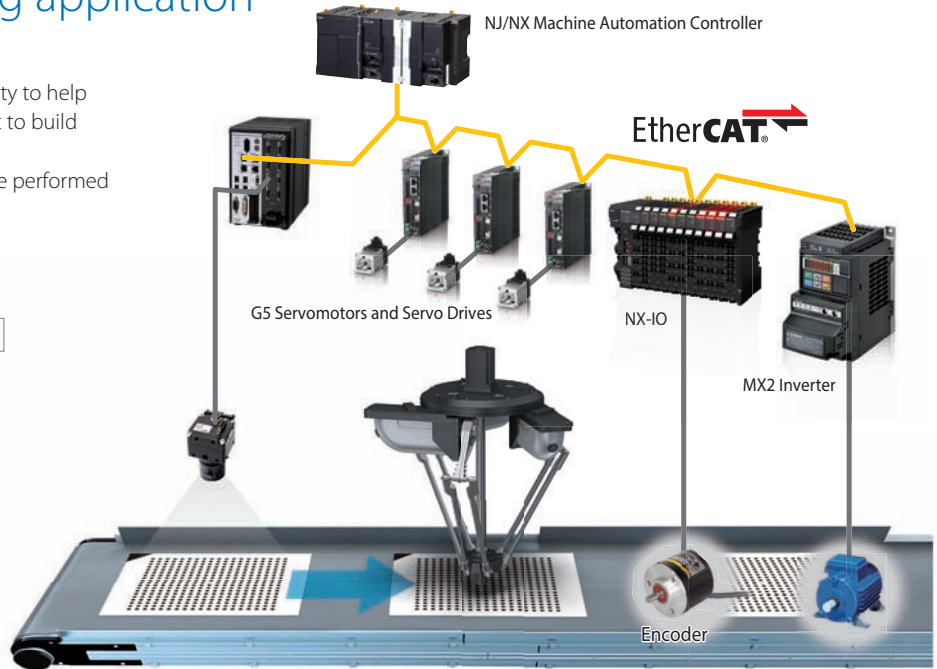

GS1 code inspection

Easy commissioning of complex systems

Conveyor tracking application

The FH-1050/-3050 Controller provides the functionality to help you build the conveyor tracking system that is difficult to build because of complicated calibration. Calibration synchronized with conveyor control can be performed via EtherCAT.

Calibration Wizard Patent Pending

Easy on-site calibration

To detect positions of workpieces carried on a conveyor and grip them with a robot hand, three different coordinate systems for the robot, conveyor, and vision must be aligned. With the FH Series, you can easily calibrate the entire system using a step-by-step wizard.

Calibration plate for wizard

From the Sysmac Studio you can print the calibration plate in various sizes, from 30 mm to 2,000 mm, according to the size of the conveyor or camera field of view.

STEP1

Start the Calibration Wizard from the Sysmac Studio, and capture the image of the calibration plate.

STEP2

Move the calibration plate into the tracking area, and let the robot touch the target mark to automatically obtain the robot coordinates.

STEP3

The FH Controller automatically calculates by using the data including the conveyor travel distance. Calibration between the robot and FH Vision System is completed.

Removing duplication Patent Pending

Workpieces that overlap within more than one field of view are segregated and only inserted in the picking line once. You can eliminate the need to create the program for the machine controller to identify the same workpiece.

First shot

The positions and orientations of workpieces 1 to 5 are detected and added to the picking line.

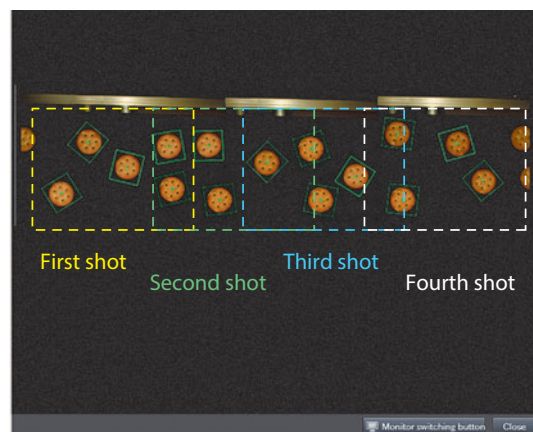

Next shot

Workpieces 4 to 8 are detected, but only the data of 6 to 8 is evaluated. The data of 4 and 5 is ignored because it was already added to the line.

Check ideal shooting intervals on panorama view Patented

The Conveyor Panorama Display Tool allows you to view the measurement trigger input intervals to ensure all workpieces can be detected.

Reliable execution of complex inspection

External inspection application using multistage lighting

Defects that can be extracted only under the limited lighting condition can be inspected using multistage lighting.

■ Inspection flow example

| 14. |

Light switching control

You can perform the inspection using images captured under different conditions by inputting multiple images in a inspection flow. The FH Series can capture images required for each inspection while changing the lighting conditions depending on inspection.

Easy light installation and setting

The use of camera-mount lighting controller eliminates the needs of power supply for lights and lighting cables, saving space and wiring. As the controller can switch lights and control brightness, you do not need to set from an external device.

Connect up to 32 lights for multistage control

You can perform multistage control with up to four lights connected to each electronic flash controller. If eight cameras are connected, up to 32 lights can be connected to the FH Controller.

Automatic generation of measurement regions

A measurement region of any shape can be automatically set by specifying a part of the area to inspect. A region of a complex shape can be set with a few operations.

Specify a part of the area to inspect

A measurement region is automatically generated from the consecutive areas in the same color

Labeling filter

This filter uses label processing to output an extracted image that contains only the specified characteristic labels.

Extraction is possible only with color or brightness information.

Extraction of labels with specified areas or shapes is possible.

Custom filter

You can set the mask coefficients as required for these filters. The mask size can be up to 21 x 21. You can more flexibly set image smoothing, edge extractions, dilation, and erosion.

Example: Dilation/erosion in one direction

Filter coefficients

You can set the filter coefficients as required.

Calculations between images

You can perform arithmetic operations, bit operations, averaging, or maximum/minimum operations between two images.

Example: You can get the average of two images that were taken under different conditions.

Brightness correct filter

This filter cuts out uneven lighting and changes in brightness caused by workpiece surface irregularities to make characteristic features stand out clearly.

The wavy inconsistencies are judged as defects.

Uneven areas are removed so that only the defect appears in the inspection.

High-speed and high-precision stage alignment

Automatic precise calibration

Just execute the flow created for calibration to complete calibration for stages.

Calibration flow example

| |

| 12. Camera 3 |
| 16. Vision Master Calibration |
| 17. Fieldbus Data Output |
| 18. End |
| 19. Stage Data |

Optimized workpiece sampling

With the previous method, the user specifies the sampling points for calibration. If the rotation angle is not wide enough, the calibration accuracy is low.

The FH Series automatically calculates sampling points that maximize the rotation angle by combining parallel movement with rotation movement within the travel range of the stage. High calibration accuracy that is not dependent on operator skill is assured.

Stages Patent Pending

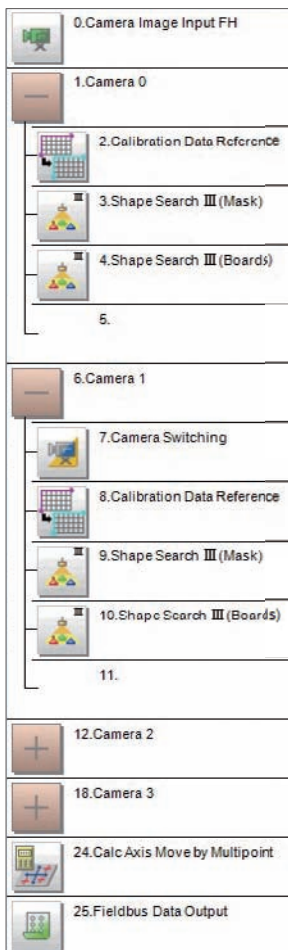

The single axis + Θ axis stages which are popular today as well as UWW stages can be used. The use of the same axis for both the handling axis of a manufacturing machine and the axis for positioning simplifies machine configuration.

High-speed and high-precision positioning

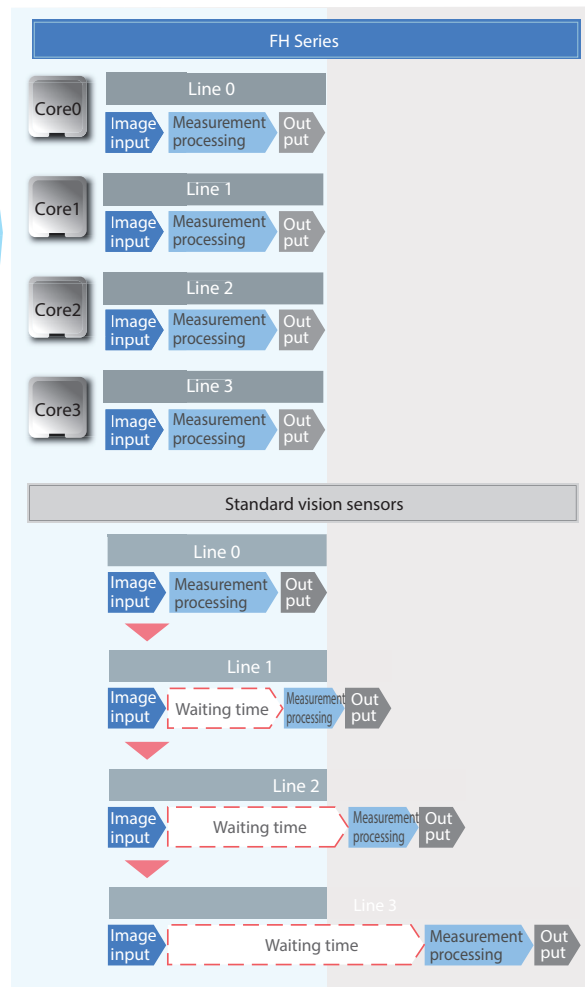

High-precision positioning can be performed by referencing calibration parameters. Fast object detection and calculation by utilizing parallel processing increase machine speeds.

Alignment flow example

Parallel processing

Object detections using multiple cameras are performed in parallel. Pipeline processing enables fast detection without waiting.

Available alignment methods

The processing items specialized for alignment calculations are provided, enabling flexible positioning of any workpiece.

•Alignment using positions and angles

•Alignment with side measurements

•Alignment using corresponding points

Data communications cycle 125 μ s

EtherCAT machine control network

You can use EtherCAT to connect NJ/NX Machine Automation Controllers and motion control G5 Servomotors and Servo Drives for high-speed control from workpiece detection to starting axis motion.

Communications cycle

Time from trigger input to producing measurement results

Note: The times given above are typical times. They depend on parameter settings.

Versatile selection

You can select the best combination of camera and controller for your application.

Software assets can be shared between controllers. This allows you to install devices with the capabilities you need, anywhere you need them.

Cameras

Choose the right camera to suit your resolution requirements.

Easy-to-use cameras with built-in light are also available.

*1 This Cable has an L-shaped connector on the Camera end.

*2 The maximum cable length depends on the Camera being connected, and the model and length of the Cable being used. For further information, please refer to the "Cameras / Cables Connection Table" and "Maximum Extension Length Using Cable Extension Units FZ-VSJ table".
When a high-speed Digital CMOS camera FH-S□02/-S□04/-S□12 is used in the high speed mode of transmission speed, two camera cables are required.

*3 Insert the cables length into □ in the model number as follows. 2 m = 2, 3 m = 3, 5 m = 5, 10 m = 10

Cameras / Cables Connection Table

| Type of camera | Model | Cable length | High-speed Digital CMOS cameras | | | | | | | Digital CMOS Camera |

*1 The FH-S□□□ enables switching between standard and high speed modes. In high speed mode, images can be transferred approximately two times faster than in standard mode, but the connectable cable length will be shorter.
 *2 The FH-S□□□ has two channels to connect Camera Cables. Connection to two channels makes image transfer two times faster than connection to one channel: high speed mode using two channels can transfer approximately four times as many images as standard mode using one channel.
 *3 Each channel can be used to connect up to two Cable Extension Units: up to four extension units, two channels x two units, can be connected by using two channels.

Connection Configuration

| | Connection configuration using the maximum length of Camera Cables | Remarks |
|-----------------|--|---------|
| Configuration 1 | | |
| Configuration 2 | | |
| Configuration 3 | | |
| Configuration 4 | | |

*4 Select the Camera Cables between the Controller and Extension Unit, between the Extension Units, and between the Extension Unit and Camera according to the connected Camera.
Different types or lengths of Camera Cables can be used for (1), (2), and (3) as well as for (4), (5), and (6). However, the type and length of Camera Cable (1) must be the same as those of Camera Cable (4), (2) must be the same as (5), and (3) must be the same as (6).

Touch Panel Monitor

| Item | Descriptions | Model |
|------|--|---------|
| | Touch Panel Monitor 12.1 inches For FH Sensor Controllers * | FH-MT12 |

* FH Series Sensor Controllers version 5.32 or higher is required.

Touch Panel Monitor Cables

| Item | Descriptions | Model |
|------|---|-----------------|
| | DVI-Analog Conversion Cable for Touch Panel Monitor Cable length: 2 m, 5 m or 10 m | FH-VMDA □M *1 |
| | RS-232C Cable for Touch Panel Monitor Cable length: 2 m, 5 m or 10 m | XW2Z-□□□PP-1 *2 |
| | USB Cable for Touch Panel Monitor Cable length: 2 m or 5 m | FH-VUAB □M *1 |

*1 Insert the cables length into □ in the model number as follows. 2 m = 2, 5 m = 5, 10 m = 10

*2 Insert the cables length into □□□ in the model number as follows. 2 m = 200, 5 m = 500, 10 m = 010.

A video signal cable and an operation signal cable are required to connect the Touch Panel Monitor.

| Signal | Cable | 2 m | 5 m | 10 m |
|------------------------------|-----------------------------|-----|-----|------|
| Video signal | DVI-Analog Conversion Cable | Yes | Yes | Yes |
| Touch panel operation signal | USB Cable | Yes | Yes | No |
| | RS-232C Cable | Yes | Yes | Yes |

Parallel I/O Cables/Encoder Cable

| Item | Descriptions | Model |
|------|--|------------------|
| | Parallel I/O Cable *1 Cable length: 2m, 5m or 15m | XW2Z-S013-□ *2 |
| | Parallel I/O Cable for Connector-terminal Conversion Unit *1 Cable length: 0.5 m, 1 m, 1.5 m, 2 m, 3 m, 5 m Connector-Terminal Block Conversion Units can be connected (Terminal Blocks Recommended Products: OMRON XW2R-□□34G-T) | XW2Z-□□□EE *3 |
| | Connector-Terminal Block Conversion Units, General-purpose devices | XW2R-□□34GD-T *4 |
| | Encoder Cable for line-driver Cable length: 1.5 m | FH-VR 1.5M |

*1 2 Cables are required for all I/O signals.

*2 Insert the cables length into □ in the model number as follows. 2 m = 2, 5 m = 5, 15 m = 15

*3 Insert the cables length into □□□ in the model number as follows. 0.5 m = 050, 1 m = 100, 1.5 m = 150, 2 m = 200, 3 m = 300, 5 m = 500

*4 Insert the wiring method into □ in the model number as follows. Phillips screw = J, Slotted screw (rise up) = E, Push-in spring = P
Refer to the XW2R Series catalog (Cat. No. G077) for details.

Parallel Converter Cable

When you change to connect the F series, FZ5 series, or FZ5-L series to FH series Sensor Controller, you can convert by using the appropriate parallel converter cable of FH-VPX series under the usable condition.

| Item | Applicable Model | | Usable Condition | Model |
|---|------------------|--------------|---|-------------|
|  | FZ□ series | | <ul style="list-style-type: none"> Do not use RESET signal. * Use with COMIN and COMOUT are same power source. | FH-VPX-FZ |
|  | FZ□-L35x series | | <ul style="list-style-type: none"> Do not use RESET signal. * | FH-VPX-FZL |
|  | F160 series | F160-C10 | <ul style="list-style-type: none"> Do not use RESET signal. * Use with COMIN and COMOUT are same power source. Do not use DI5 and DI6. | FH-VPX-F160 |
|  | F210 series | F210-C10 | <ul style="list-style-type: none"> Do not use RESET signal. * Use with COMIN and COMOUT are same power source. | FH-VPX-F210 |
| | | F210-C10-ETN | | |
| | F500 series | F500-C10 | <ul style="list-style-type: none"> Do not use DI8 and DI9. | |

* Even if RESET signal cannot be use by conversion, conversion is possible to convert satisfying other usable condition.

Note: Cannot be used for the F160-C10CP/-C10CF.

Recommended EtherCAT and EtherNet/IP Communications Cables

Use Straight STP (shielded twisted-pair) cable of category 5 or higher with double shielding (braiding and aluminum foil tape) for EtherCAT.

Use Straight or cross STP (shielded twisted-pair) cable of category 5 or higher for EtherNet/IP.

Cable with Connectors

*1 Cables with standard RJ45 plugs are available in the following lengths: 0.2 m, 0.3 m, 0.5 m, 1 m, 1.5 m, 2 m, 3 m, 5 m, 7.5 m, 10 m, 15 m, 20 m. Cables with rugged RJ45 plugs are available in the following lengths: 0.3 m, 0.5 m, 1 m, 2 m, 3 m, 5 m, 10 m, 15 m. For details, refer to the Industrial Ethernet Connectors Catalog (Cat. No. G019).

*2 The lineup features Low Smoke Zero Halogen cables for in-cabinet use and PUR cables for out-of-cabinet use. Although the LSZH cable is single shielded, its communications and noise characteristics meet the standards.

*3 Cables colors are available in yellow, green, and blue.

*4 For details, contact your OMRON representative.

*5 Cables are available from 0.25 m to 100 m. Ask the manufacturer for details.

*1 Insert the shape into □□□□ in the model number as follows.

- Straight : -O
- Coaxial : CO-O

*2 The working distance is the distance from the end of the lens to the workpiece.

*3 The depth of field is calculated using a permissible circle of confusion diameter of 0.04 mm.

*4 The resolution is calculated using a wavelength of 550 nm.

Note: 1. Fixing the lens or other reinforcement may be required depending on the installation angle or operating environment (vibration/shock).
When fixing the lens, insulate the lens from the fixture.

2. The above specifications are values calculated from the optical design and can vary depending on installation conditions.

Extension Tubes

| Lenses | For M42 mount Lenses * | For C mount Lenses * | For Small Digital CCD Cameras |
|----------|--|---|--|
| Model | 3Z4S-LE VS-EXR/M42 | 3Z4S-LE SV-EXR | FZ-LESR |
| Contents | Set of 5 tubes (20 mm, 10 mm, 8 mm, 2 mm, and 1 mm) Maximum outer diameter: 47.5 mm dia. | Set of 7 tubes (40 mm, 20 mm, 10 mm, 5 mm, 2.0 mm, 1.0 mm, and 0.5 mm) Maximum outer diameter: 30 mm dia. | Set of 3 tubes (15 mm, 10 mm, 5 mm) Maximum outer diameter: 12 mm dia. |

* Do not use the 0.5-mm, 1.0-mm, and 2.0-mm Extension Tubes attached to each other. Since these Extension Tubes are placed over the threaded section of the Lens or other Extension Tube, the connection may loosen when more than one 0.5-mm, 1.0-mm or 2.0-mm Extension Tube are used together. Reinforcement is required to protect against vibration when Extension Tubes exceeding 30 mm are used. When using the Extension Tube, check it on the actual device before using it.

*1 Number of logging images is the maximum number of logging images that can be saved in the memory of the Sensor Controller itself and it depends on the settings of the system and the scene.

Refer to Vision System FH/FZ5 Series User's Manual (Z340).

*2 When using two camera cables for connection, the maximum number of loaded images during multi-input is twice the number given in the table.

*3 The multi-input function cannot be used when the built-in lighting of an intelligent compact Digital camera is used.

Refer to the Vision System FH/FZ5 Series User's Manual (Cat. No. Z340) for details.

Ratings and Specifications (Cable, Monitor)

Camera Cables

| Model | FZ-VS3 (2 m) | FZ-VSB3 (2 m) | FZ-VSL3 (2 m) | FZ-VSLB3 (2 m) |
|-------------------------------------|---|------------------|------------------|-------------------------------|
| Type | Standard | Bend resistant | Right-angle | Bend resistant Right-angle |
| Shock resistiveness (durability) | 10 to 150 Hz single amplitude 0.15 mm 3 directions, 8 strokes, 4 times | | | |
| Ambient temperature range | Operation and storage: 0 to 65 °C (with no icing or condensation) | | | |
| Ambient humidity range | Operation and storage: 40 to 70%RH (with no condensation) | | | |
| Ambient atmosphere | No corrosive gases | | | |
| Material | Cable sheath, connector: PVC | | | |
| Minimum bending radius | 69mm | 69mm | 69mm | 69mm |
| Weight | Approx. 170 g | Approx. 180 g | Approx. 170 g | Approx. 180 g |

Cable Extension Unit

| Model | FZ-VSJ |
|------------------------------|---|
| Power supply voltage *1 | 11.5 to 13.5 VDC |
| Current consumption *2 | 1.5 A max. |
| Ambient temperature range | Operating: 0 to 50 °C; Storage: -25 to 65 °C (with no icing or condensation) |
| Ambient humidity range | Operating and storage: 35 to 85% (with no condensation) |
| Weight | Approx. 240 g |
| Accessories | Instruction Sheet and 4 mounting screws |

*1 A 12-VDC power supply must be provided to the Cable Extension Unit when connecting the Intelligent Compact Camera, or the Lighting Controller.

*2 The current consumption shows when connecting the Cable Extension Unit to an external power supply.

Touch Panel Monitor

| Model | FH-MT12 | |
|-----------------------|---------------------------|---|
| Major Function | Display area | 12.1 inch |
| | Resolution | 1024 (V) × 768 (H) |
| | Number of color | 16,700,000 colors (8 bit/color) |
| | Brightness | 500cd/m ² (Typ) |
| | Contrast Ratio | 600:1 (Typ) |
| | Viewing angle | Left and right: each 80°, upward: 80°, downward: 60° |
| | Backlight Unit | LED, edge-light |
| | Backlight lifetime | About 100,000hour |
| External interface | Touch panel | 4wire resistive touch screen |
| | Video input | analog RGB |
| | Touch panel signal | USB RS-232C |
| Ratings | Power supply voltage | 24 VDC (21.6 to 26.4 VDC) |
| | Current consumption | 0.5A |
| | Insulation resistance | Between DC power supply and Touch Panel Monitor FG: 20 MΩ or higher (rated voltage 250 V) |
| Operating environment | Ambient temperature range | Operating: 0 to 50°C, Storage: -20 to +65°C (with no icing or condensation) |
| | Ambient humidity range | Operating and Storage: 20 to 85 %RH (with no icing or condensation) |
| | Ambient environment | No corrosive gas |
| | Vibration resistance | 10 to 150 Hz, one-side amplitude 0.1 mm (Max. acceleration 15 m/s ²) 10 times for 8 minutes for each three direction |
| | Degree of protection | Panel mounting: IP65 on the front |
| Operation | Touch pen | |
| Structure | Mounting | Panel mounting, VESA mounting |
| | Weight | Approx.2.6 kg |
| | Material | Front panel: PC/PBT, Front Sheet: PET, Rear case: SUS |

Note: FH Series Sensor Controllers version 5.32 or higher is required.

Touch Panel Monitor Cables

| Model | FH-VMDA (2 m) | FH-VUAB (2 m) | XW2Z-200PP-1 (2 m) |
|----------------------|--|---------------|---|
| Cable type | DVI-Analog Conversion Cable | USB Cable | RS-232C Cable |
| Vibration resistance | 10 to 150 Hz, one-side amplitude 0.1 mm, 10 times for 8 minutes for each three direction | | |
| Ambient Temperature | Operating Condition: 0 to 50°C, Storage Condition: -10 to 60°C (with no icing or condensation) | | |
| Ambient Humidity | Operating Condition: 35 to 85%RH, Storage Condition: 35 to 85%RH (with no icing or condensation) | | |
| Ambient environment | No corrosive gases | | |
| Material | Cable outer sheath, Connector: PVC | | Cable outer sheath: PVC, Connector: ABS/Ni Plating |
| Minimum bend radius | 36 mm | 25 mm | 59 mm |
| Weight | Approx.220 g | Approx.75 g | Approx.162 g |

Long-distance Camera Cables

| Model | FZ-VS4 (15 m) | FZ-VSL4 (15 m) |
|-------------------------------------|---|----------------|
| Type | Standard | Right-angle |
| Shock resistiveness (durability) | 10 to 150 Hz single amplitude 0.15 mm 3 directions, 8 strokes, 4 times | |
| Ambient temperature range | Operation and storage: 0 to 65 °C (with no icing or condensation) | |
| Ambient humidity range | Operation and storage: 40 to 70%RH (with no condensation) | |
| Ambient atmosphere | No corrosive gases | |
| Material | Cable sheath, connector: PVC | |
| Minimum bending radius | 78 mm | |
| Weight | Approx. 1400 g | |

Encoder Cable

| Model | FH-VR |
|------------------------------|---|
| Vibration resistiveness | 10 to 150 Hz single amplitude 0.1 mm 3 directions, 8 strokes, 10 times |
| Ambient temperature range | Operation: 0 to 50 °C; Storage: -10 to 60 °C (with no icing or condensation) |
| Ambient humidity range | Operation and storage: 35 to 85%RH (with no condensation) |
| Ambient atmosphere | No corrosive gases |
| Material | Cable Jacket: Heat, oil and flame resistant PVC Connector: polycarbonate resin |
| Minimum bending radius | 65 mm |
| Weight | Approx. 104 g |

LCD Monitor

| Model | FZ-M08 |
|---------------------------|--|
| Size | 8.4 inches |
| Type | Liquid crystal color TFT |
| Resolution | 1,024 × 768 dots |
| Input signal | Analog RGB video input, 1 channel |
| Power supply voltage | 21.6 to 26.4 VDC |
| Current consumption | Approx. 0.7 A max. |
| Ambient temperature range | Operating: 0 to 50 °C; Storage: -25 to 65 °C (with no icing or condensation) |
| Ambient humidity range | Operating and storage: 35 to 85% (with no condensation) |
| Weight | Approx. 1.2 kg |
| Accessories | Instruction Sheet and 4 mounting brackets |

LCD Monitor Cable

| Model | FZ-VM |
|---------------------------|--|
| Vibration resistiveness | 10 to 150 Hz single amplitude 0.15 mm 3 directions, 8 strokes, 4 times |
| Ambient temperature range | Operation: 0 to 50 °C; Storage: -20 to 65 °C (with no icing or condensation) |
| Ambient humidity range | Operation and storage: 35 to 85%RH (with no condensation) |
| Ambient atmosphere | No corrosive gases |
| Material | Cable sheath: heat-resistant PVC Connector: PVC |
| Minimum bending radius | 75 mm |
| Weight | Approx. 170 g |

Note: When you connect a LCD Monitor FZ-M08 to FH sensor controller, please use it in combination with a DVI-I -RGB Conversion Connector FH-VMRGB.

EtherCAT Communications Specifications

| Item | Specifications |
|-------------------------------|---|
| Communications standard | IEC61158 Type 12 |
| Physical layer | 100 BASE-TX (IEEE802.3) |
| Modulation | Base band |
| Baud rate | 100 Mbps |
| Topology | Depends on the specifications of the EtherCAT master. |
| Transmission Media | Twisted-pair cable of category 5 or higher (double-shielded straight cable with aluminum tape and braiding) |
| Transmission Distance | Distance between nodes: 100 m or less |
| Node address setting | 00 to 9 |
| External connection terminals | RJ45 × 2 (shielded) IN: EtherCAT input data, OUT: EtherCAT output data |
| Send/receive PDO data sizes | Input |
| | Output |
| Mailbox data size | Input |
| | Output |
| Mailbox | Emergency messages, SDO requests, and SDO information |
| Refreshing methods | I/O-synchronized refreshing (DC) |

* This depends on the upper limit of the master.

Version Information

FH Series and Programming Devices

Use the latest version of Sysmac Studio Standard Edition/Vision Edition.

| FH Series | Version of FH Series | Corresponding version of Sysmac Studio Standard Edition/Vision Edition |
|------------------------------|----------------------|--|
| FH-3050 (-□) FH-1050 (-□) | Version 5.72 | Support expected with new version after October 2017. |
| | Version 5.71 | Supported by version 1.18 or higher. |
| | Version 5.60 | Supported by version 1.15 or higher. |
| | Version 5.50 | Supported by version 1.14.89 or higher. |
| | Version 5.30 | Supported by version 1.10.80 or higher. |
| | Version 5.20 | Supported by version 1.10 or higher. |
| | Version 5.10 | Supported by version 1.07.43 or higher. |
| | Version 5.00 | Supported by version 1.07 or higher. Not supported by version 1.06 or lower. |

Components and Functions

**Sensor Controllers
High-speed Controllers/
Standard Controllers
BOX type
(4-camera type)**

| | Name | Description |
|------|---------------------------|---|
| [1] | POWER LED | Lit while power is ON. |
| [2] | ERROR LED | Lit when an error has occurred. |
| [3] | RUN LED | Lit while the layout turned on output setting is displayed. |
| [4] | ACCESS LED | Blinks while the internal nonvolatile memory is accessed. |
| [5] | SD POWER LED | Blinks while power is supplied to the SD memory card and the card is usable. |
| [6] | SD BUSY LED | Blinks while the SD memory card is accessed. |
| [7] | EtherCAT RUN LED | Lit while EtherCAT communications are usable. |
| [8] | EtherCAT LINK/ACT IN LED | Lit when connected with an EtherCAT device, and blinks while performing communications. |
| [9] | EtherCAT LINK/ACT OUT LED | Lit when connected with an EtherCAT device, and blinks while performing communications. |

| E | DVI-I connector | Connect a monitor. | | | | | | |
| F | I/O connector (control lines, data lines) | Connect the controller to external devices such as a sync sensor and PLC. | | | | | | |
| G | EtherCAT address setup volume | Used to set a node address (00 to 99) as an EtherCAT communication device. | | | | | | |
| H | EtherCAT communication connector (IN) | Connect the opposed EtherCAT device. | | | | | | |
| I | EtherCAT communication connector (OUT) | Connect the opposed EtherCAT device. | | | | | | |
| J | Encoder connector | Connect an encoder. | | | | | | |
| K | Camera connector | Connect cameras. | | | | | | |
| L | Power supply terminal connector | Connect a DC power supply. Wire the controller independently on other devices. Wire * the ground line. Be sure to ground the controller alone. | | | | | | |

* Use the attachment power terminal connector (male) of FH-XCN series.
For details, refer to 5-3 Sensor Controller Installation on Vision System FH/FZ5 series Hardware Setup Manual (Z366).

Lite Controllers BOX type (4-camera type)

| | LED name | Description |
|-----|-----------------------|--|
| [1] | PWR LED | Lit while power is ON. |
| [2] | ERROR LED | Lit when an error has occurred. |
| [3] | RUN LED | Lit while the layout turned on output setting is displayed. |
| [4] | ACCESS LED | Blinks while the internal nonvolatile memory is accessed. |
| [5] | SD PWR LED | Lit while power is supplied to the SD memory card and the card is usable. |
| [6] | SD BUSY LED | Lit when access to the SD memory card. |
| [7] | Ethernet NET RUN LED | Lit while Ethernet communications are usable. |
| [8] | Ethernet LINK/ACT LED | Blinks when connected with an Ethernet device, and blinks while performing communications. |

| | Connector name | Description |
|---|--|---|
| A | SD memory card installation connector | Install the SD memory card. Do not plug or unplug the SD memory card during measurement operation. Otherwise measurement time may be affected or data may be destroyed. |
| B | USB 2.0 connector | Connects to USB 2.0. Do not insert or remove during loading or writing of measurement or data. The measurement time can be longer or data can be damaged. |
| C | USB 3.0 connector | Connects to USB 3.0. Do not insert or remove during loading or writing of measurement or data. The measurement time can be longer or data can be damaged. USB 3.0 has a high ability to supply the bus power. Use the Sensor Controller by combining USB 3.0, faster transport can be realized. |
| D | Ethernet connector | Connect an Ethernet device. Shared Ethernet port and EtherNet/IP port. |
| E | RS-232C connector | Connect an external device such as a programmable controller. |
| F | DVI-I connector | Connect a monitor. |
| G | Parallel connector (control lines, data lines) | Connect the controller to external devices such as a sync sensor. |
| H | Camera connector | Connect a camera. |
| I | Power supply terminal connector | Connect a DC power supply. Wire the controller independently on other devices. Wire * the ground line. Be sure to ground the FH Sensor Controller alone. |

* Use the attachment power terminal connector (male) of FH-XCN-L series.
For details, refer to 5-3 Sensor Controller Installation on Vision System FH/FZ5 series Hardware Setup Manual(Z366).

Processing Items

| Group | Icon | Processing Item | Corresponding Page in the Catalog |
|-------------|------|---|-----------------------------------|
| Measurement | | Search Used to identify the shapes and calculate the position of measurement objects. | P16 |
| | | Flexible Search Recognizing the shapes of workpieces with variation and detecting their positions. | P16 |
| | | Sensitive Search Search a small difference by dividing the search model in detail, and calculating the correlation. | P16 |
| | | ECM Search Used to search the similar part of model form input image. Detect the evaluation value and position. | |
| | | EC Circle Search Extract circles using "round" shape information and get position, radius and quantity in high preciseness. | |
| | | Shape Search II Used to search the similar part of model from input image regardless of environmental changes. Detect the evaluation value and position. | P16 |
| | | Shape Search III Robust detection of positions is possible at high-speed and with high precision incorporating environmental fluctuations, such as differences in individual shapes of the workpieces, pose fluctuations, noise superimposition and shielding. | P16 |
| | | EC Corner This processing item measures a corner position (corner) of a workpiece. | |
| | | Ec Cross The center position of a crosshair shape is measured using the lines created by the edge information on each side of the crosshair. | |
| | | Classification Used when various kinds of products on the assembly line need to be sorted and identified. | P16 |
| | | Edge Position Measure position of measurement objects according to the color change in measurement area. | P16 |
| | | Edge Pitch Detect edges by color change in measurement area. Used for calculating number of pins of IC and connectors. | P16 |
| | | Scan Edge Position Measure peak/bottom edge position of workpieces according to the color change in separated measurement area. | P16 |
| | | Scan Edge Width Measure max/min/average width of workpieces according to the color change in separated measurement area. | P16 |
| | | Circular Scan Edge Position Measure center axis, diameter and radius of circular workpieces. | P16 |
| | | Circular Scan Edge Width Measure center axis, width and thickness of ring workpieces. | P16 |
| | | Intersection Calculate approximate lines from the edge information on two sides of a square workpiece to measure the angle formed at the intersection of the two lines. | P16 |
| | | Color Data Used for detecting presence and mixed varieties of products by using color average and deviation. | |
| | | Gravity and Area Used to measure area, center of gravity of workpieces by extracting the color to be measured. | |
| | | Labeling Used to measure number, area and gravity of workpieces by extracting registered color. | |
| | | Label Data Selecting one region of extracted Labeling, and get that measurement. Area and Gravity position can be got and judged. | |
| | | Defect Used for appearance measurement of plain-color measurement objects such as defects, stains and burrs. | P16 |
| | | Precise Defect Check the defect on the object. Parameters for extraction defect can be set precisely. | P16 |
| | | Fine Matching Difference can be detected by overlapping and comparing (matching) registered fine images with input images. | P16 |
| | | Character Inspect Recognize character according correlation search with model image registered in [Model Dictionary]. | P17 |
| | | Date Verification Reading character string is verified with internal date. | P17 |
| | | Model Dictionary Register character pattern as dictionary. The pattern is used in [Character Inspection]. | |
| | | 2DCode *2 Recognize 2D code and display where the code quality is poor. | P17 |
| | | Barcode *1 Recognize barcode, verify and output decoded characters. | P17 |
| | | OCR Recognize and read characters in images as character information. | P17 |
| | | OCR User Dictionary Register dictionary data to use for OCR. | P17 |
| | | Circle Angle Used for calculating angle of inclination of circular measurement objects. | |
| | | Glue Bead Inspection You can inspect coating of a specified color for gaps or runoffs along the coating path. | P17 |
| Input Image | | Camera Image Input FH To input images from cameras. And set up the conditions to input images from cameras. (For FH Sensor Controllers only) | |
| | | Camera Image Input HDR Create high-dynamic range images by acquiring several images with different conditions. | |
| | | Camera Image Input HDRLite HDR function for FZ-SQ□ Intelligent Compact Cameras. | |
| | | Camera Switch To switch the cameras used for measurement. Not input images from cameras again. | |

| Group | Icon | Processing Item | Corresponding Page in the Catalog |
|---------------------|------------------|--|---|
| Input Image | | Measurement Image Switching To switch the images used for measurement. Not input images from camera again. | |
| | | Multi-trigger Imaging The Multi-trigger Imaging processing item captures multiple images at user-defined timings and executes parallel measurement for each image. Insert the Multi-trigger Imaging to the top of the flow. | |
| | | Multi-trigger Imaging Task The Multi-trigger Imaging processing item captures multiple images at user-defined timings and executes parallel measurement for each image. Insert this processing item to the top of the processing which requires imaging for multiple times. | |
| | | Position Compensation Used when positions are differed. Correct measurement is performed by correcting position of input images. | P18 |
| | | Filtering Used for processing images input from cameras in order to make them easier to be measured. | P18 |
| | | Background Suppression To enhance contrast of images by extracting color in specified brightness. | P18 |
| | | Brightness Correct Filter Track brightness change of entire screen and remove gradual brightness change such as uneven brightness. | P18 |
| | | Color Gray Filter Color image is converted into monochrome images to emphasize specific color. | P18 |
| | | Extract Color Filter Convert color image to color extracted image or binary image. | P18 |
| | | Anti Color Shading To remove the irregular color/pattern by uniformizing max.2 specified colors. | P18 |
| | | Stripes Removal Filter II Remove the background pattern of vertical, horizontal and diagonal stripes. | P19 |
| | | Polar Transformation Rectify the image by polar transformation. Useful for OCR or pattern inspection printed on circle. | P18 |
| | | Trapezoidal Correction Rectify the trapezoidal deformed image. | P18 |
| | | Machine Simulator How the alignment marks would move on the image when each stage or robot axis is controlled can be checked. | |
| | Compensate image | | Image Subtraction The registered model image and measurement image are compared and only the different pixels are extracted and converted to an image. |
| | | Advanced filter Process the images acquired from cameras in order to make them easier to measure. This processing item consolidates existing image conversion filtering into one processing item and adds extra functions. | P18 |
| | | Panorama Combine multiple image to create one big image. | P18 |
| | | Unit Macro Advanced arithmetic processing can be easily incorporated into workflow as Unit Macro processing items. | P20 |
| | | Unit Calculation Macro This function is convenient when the user wants to calculate a value using an original calculation formula or change the set value or system data of a processing item. | P20 |
| | | Calculation Used when using the judge results and measured values of Procltem which are registered in processing units. | |
| | | Line Regression Used for calculating regression line from plural measurement coordinate. | |
| | | Circle Regression Used for calculating regression circle from plural measurement coordinate. | |
| | | Precise Calibration Used for calibration corresponding to trapezoidal distortion and lens distortion. | P15 |
| | | User Data Used for setting of the data that can be used as common constants and variables in scene group data. | P21 |
| | | Set Unit Data Used to change the Procltem data (setting parameters, etc.) that has been set up in a scene. | |
| | | Get Unit Data Used to get one data (measured results, setting parameters, etc.) of Procltem that has been set up in a scene. | |
| | | Set Unit Figure Used for re-setting the figure data (model, measurement area) registered in an unit. | |
| | | Get Unit Figure Used for get the figure data (model, measurement area) registered in an unit. | |
| Support measurement | | | Trend Monitor Used for displaying the information about results on the monitor, facilitating to avoid NG and analyze causes. |
| | | Image Logging Used for saving the measurement images to the memory and USB memory. | |
| | | Image Conversion Logging Used for saving the measurement images in JPEG and BMP format. | |
| | | Data Logging Used for saving the measurement data to the memory and USB memory. | |
| | | Elapsed Time Used for calculating the elapsed time since the measurement trigger input. | |
| | | Wait Processing is stopped only at the set time. The standby time is set by the unit of [ms]. | |
| | | Focus Focus setting is supported. | P15 |

| Group | Icon | Processing Item | Corresponding Page in the Catalog |
|---------------------|---|---|-----------------------------------|
| Support measurement | | Iris Focus and aperture setting is supported. | P15 |
| | | Parallelize A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed at the top of processing to be performed in parallel. | |
| | | Parallelize Task A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed immediately before processing to be performed in parallel between Parallelize and Parallelize End. | |
| | | Statistics Used when you need to calculate an average of multiple measurement results. | |
| | | Reference Calib Data Calibration data and distortion compensation data held under other processing items can be referenced. | |
| | | Position Data Calculation The specified position angle is calculated from the measured positions. | P14 |
| | | Stage Data Sets and stores data related to stages. | |
| | | Robot Data Sets and stores data related to robots. | |
| | | Vision Master Calibration This processing item automatically calculates the entire axis movement amount of the control equipment necessary for calibration. | P15 |
| | | PLC Mastroer Calibration Calibration data is created using a communication command from PLC. | P15 |
| | | Convert Position Data The position angle after the specified axis movement is calculated. | P14 |
| | | Movement Single Position The axis movement that is required to match the measured position angle to the reference position angle is calculated. | P14 |
| | | Movement Multi Points The axis movements that are required to match the measured position angles to the corresponding reference position angles are calculated. | P14 |
| | | Detection Point Obtains position/angle information by referring to the coordinate values measured with the Measurement Processing Unit. | |
| | | Camera Calibration By setting the camera calibration, the measurement result can be converted and output as actual dimensions. | P15 |
| | | Data Save The set data can be saved in the controller main unit or as scene data. The data is held even after the FH/FZ power is turned off. | |
| | Conveyor Calibration Conveyor Calibration is used to calibrate camera, conveyor, and robots for conveyor tracking application. | | |

| Group | Icon | Processing Item | Corresponding Page in the Catalog |
|----------------|------|---|-----------------------------------|
| Branch | | Conditional Branch Used where more than two kinds of products on the production line need to be detected separately. | |
| | | End This Procltem must be set up as the last processing unit of a branch. | |
| | | DI Branch Same as Procltem "Branch". But you can change the targets of conditional branching via external inputs. | |
| | | Control Flow Normal Set the measurement flow processing into the wait state in which the specific no-protocol command can be executed. | |
| | | Control Flow PLC Link Set the measurement flow processing into the wait state in which the specific PLC Link command can be executed. | |
| | | Control Flow Parallel Set the measurement flow processing into the wait state in which the specific parallel command can be executed. | |
| | | Control Flow Fieldbus Set the measurement flow processing into the wait state in which the specific Fieldbus command can be executed. | |
| | | Selective Branch Easily branch to multiple destinations. | |
| Output result | | Data Output Used when you need to output data to the external devices such as PLC or PC via serial ports. | |
| | | Parallel Data Output Used when you need to output data to the external devices such as PLC or PC via parallel ports. | |
| | | Parallel Judgement Output Used when you need to output judgement results to the external devices such as PLC or PC via parallel ports. | |
| | | Fieldbus Data Output Outputs data to an external device, such as a Programmable Controller, through a fieldbus interface. | |
| Display result | | Result Display Used for displaying the texts or the figures in the camera image. | |
| | | Display Image File Display selected image file. | |
| | | Display Last NG Image Display the last NG images. | |
| | | Conveyor Panorama Display Display images of the tracking area as a panoramic image. | |

Optical Chart

Meaning of Optical Chart

The X axis of the optical chart shows the field of vision (mm) (*1), and the Y axis of the optical chart shows the camera installation distance (mm) (*2).

*1 The lengths of the fields of vision given in the optical charts are the lengths of the Y axis.
*2 The vertical axis represents WD for small cameras.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See <http://www.omron.com/global/> or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
