

**T**he perfect working partner for our High Viscosity Mixer and PVM Planetary Mixer. Transferring high viscous product from the mixing tank to your onward packaging system is simple with our Ram Press. The double acting hydraulic system allows regulated constant flow of the pressurised product, permit direct filling from the mixing tank.

- ⤷ Heavy built "H" frame body.
- ⤷ Top mounted hydraulic cylinder.
- ⤷ Raised tank platform with safety locking devices.
- ⤷ Twin hydraulic power packs with pressure sensors for regulated flow adjustment.
- ⤷ User friendly setup.
- ⤷ Precision built tank (mixing tank) eliminate leakage.

**HYDRAULIC DRIVEN RAM PRESS**

NISMIX

The trend for high-built sealing and coating product has prompt us to design and build a machine, which will meet almost all manufacturing processes. The customised vacuum system incorporated into this machine will enhance better product quality.

- ⊃ Over-engineered body construction ensure continuous vibration-free operations.
- ⊃ Variable high speed shaft in planetary movement makes better dispersion for both low and high viscous product, easier.
- ⊃ Tank-fit scraper blade prevent material from sticking on the wall of the mixing tank.
- ⊃ Processing under vacuum condition enhance product quality.
