

FUEL TECHNOLOGIES INTERNATIONAL, LLC

Generator Back-up Power and Fire Pump Filtration System

FTI – 1.5

IS YOUR STORED DIESEL/BIODIESEL DIRTY?

Stored diesel fuel does not stay clean and safe forever. In fact, it can begin to deteriorate within 28 days of storage. Microorganisms and dirt will also contaminate your fuel over time. And bad fuel can cause diesel engine damage or failure.

Fuel Technologies International has years of fuel maintenance experience that can help you solve your dirty fuel problem. Buildup of moisture and contaminants in your fuel storage tank can clog inline engine filters, causing engine shutdown and engine damage.
