# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Overview

In many industrial and public sectors, explosion protection or explosion hazards are ever-present, e.g. in the chemicals industry, in refineries, on drilling platforms, at gas stations, in feed manufacturing and in sewage treatment plants.

The risk of explosion is always present when gases, fumes, mist or dust are mixed with oxygen in the air in an explosive ratio close to sources of ignition that are able to release the so-called minimum ignition energy.

In the chemical and petrochemical industries in particular, when crude oil and natural gas are transported, or in mining, milling (e.g. grain and granular solids), this can result in serious injury to persons and damage to equipment.

To ensure maximum safety in these areas, legislators in most countries have implemented appropriate stipulations in the form of laws and regulations based on national and international standards.

Explosion-protected equipment is designed such that an explosion can be prevented when it is used properly.

The explosion-protected equipment can be designed in accordance with various types of protection.

The local conditions must be subdivided into specified zones by the user with the assistance of the responsible authorities in accordance with the frequency of occurrence of an explosion hazard. Device (equipment) categories are assigned to these zones. The zones are then subdivided into possible types of protection and therefore into possible equipment (product) types.

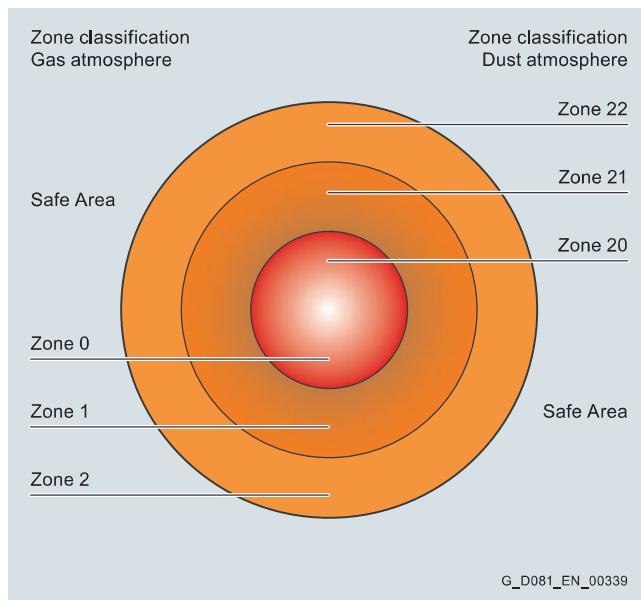

5

### Classification of zones

Areas subject to explosion hazard are divided into zones. Division into zones depends on the chronological and geographical probability of the presence of a hazardous, potentially explosive atmosphere. Information and specifications for classification of the zones are laid down in the following standards:

- IEC/EN 60079-10-1 for gas atmospheres
- IEC/EN 60079-10-2 for dust atmospheres

Further, a distinction is made between various explosion groups as well as temperature classes and these are included in the hazard assessment.

Depending on the particular zone and therefore the associated hazard, operating equipment must comply with defined minimum requirements regarding the type of protection. The different types of protection require corresponding measures to prevent ignition that should be implemented at the motor in order to prevent a surrounding explosive atmosphere from being ignited.

#### Note:

According to the standard IEC/EN 60079-7:2015, the previous designations of the types of protection Ex e and Ex nA have been changed to **Ex eb** and **Ex ec** respectively. The expiration date of the previous designations was July 31, 2018.

**SIMOTICS XP 1MB1, 1MB5 explosion-protected motors**

- 20	An area in which there is an explosive gas atmosphere comprising a dust-air mixture <b>continuously, over long periods or frequently.</b>	Low-voltage motors not permitted	1	Da
- 21	An area in which it is expected that an explosive gas atmosphere comprising a dust-air mixture <b>will</b> be present <b>occasionally</b> during normal operation.	Ex tb <sup>3)</sup>	2	Db
- 22	An area in which it is expected that an explosive gas atmosphere in the form of a cloud of combustible dust in air <b>will</b> be present only <b>rarely</b> and then only <b>for a short period</b> during normal operation,	Ex tc <sup>4)</sup>	3	Dc

Changes to the Ex marking

In accordance with the latest edition of the standards for "Flameproof enclosure" and "Increased safety" types of protection, there is a change to how devices and equipment are marked. The type of protection "Non-sparking" Ex nA acc. to IEC/EN 60079-15 has been integrated into the latest edition of the standard for "Increased safety" according to IEC/EN 60079-7 as Ex ec. This has the following effect on the Ex marking:

- "Increased safety" for Zone 1 and Zone 2 (previously Ex e):  
II 2G Ex eb IIC T3 Gb
- "Increased safety" for Zone 2 (previously Ex nA):  
II 3G Ex ec IIC T3 Gc
- Flameproof enclosure for Zone 1 and Zone 2 (previously Ex d):  
II 2G Ex db IIC T4 Gb

There are no changes for the user other than the device marking.

**Overview of standards for explosion protection**

The explosion-protected three-phase motors comply with European standards. The European standards are recognized by all member states of CENELEC (European Committee for Electrotechnical Standardization). The national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Spain, Sweden, Switzerland, Portugal, and United Kingdom (UK) are members of CENELEC.

5

Title	European standard
General provisions	EN 60079-0

<sup>1)</sup> Motors of  
- Zone 1 can also be used in Zone 2  
- Zone 21 can also be used in Zone 22

<sup>2)</sup> Motors which are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures:  
Explosive gas and dust atmospheres are present simultaneously.

<sup>3)</sup> SIMOTICS XP motors with type of protection Ex tb are intended for group IIIC as a general rule, i.e. they are permitted for operation in environments with conductive and non-conductive dust.

<sup>4)</sup> SIMOTICS XP motors with type of protection Ex tc are intended for group IIIB as a general rule, i.e. they are not permitted for operation in environments with conductive dust.

# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Overview

#### Temperature classes and groups

Combustible gases and vapors are divided into temperature classes according to their ignitability and into groups according to their spark ignition capacity. The marking of a three-phase motor with the codes for the type of protection, group and temperature class specifies that it can be used without danger in hazardous areas depending on the zone classification. The numerical sequence of the codes for the group and temperature class has been selected so that motors that satisfy the requirements for a certain group and temperature class also satisfy the requirements for lower groups and classes.

#### Temperature classes

Temperature class of electrical equipment	Maximum surface temperature of electrical equipment	Ignition temperature of gases or vapors
T1	450 °C	> 450 °C
T2	300 °C	> 300 °C
T3	200 °C	> 200 °C
T4	135 °C	> 135 °C
T5	100 °C	> 100 °C
T6	85 °C	> 85 °C

#### Examples of the assignment of combustible gases and vapors

Group	Temperature classes											
	T1 Material designation	Ignition temperature °C	T2 Material designation	Ignition temperature °C	T3 Material designation	Ignition temperature °C	T4 Material designation	Ignition temperature °C	T5 Material designation	Ignition temperature °C	T6 Material designation	Ignition temperature °C

#### Explosion Protection Directive 2014/34/EU

Explosion protection has been fully harmonized by Directive 2014/34/EU in Germany and in the other member states of the European Union. The requirements of the new law came into force on April 20, 2016. Since then only those devices and protection systems that comply with Directive 2014/34/EU are permitted to be placed on the market.

Directive 2014/34/EU and Directive 1999/92/EC specify that only specific electrical equipment and devices are permitted to be used in the zones. The devices are assigned to equipment groups and categories.

#### Use of electrical equipment in accordance with EN 60079-14

Electrical equipment used in potentially explosive workshops and storage areas must comply with EN 60079-14/ VDE 0165-1 "Explosive atmospheres - Part 14: Electrical installations design, selection and erection". All other general regulations issued by the responsible supervisory authorities and the Employer's Liability Insurance Association or any specifically issued for individual case are also applicable. A plant or system subject to inspection is not permitted to be commissioned initially or following a significant modification until the plant or system has been inspected by an approved inspection agency for correctness of assembly, installation, site conditions and safe operation, taking into account the intended mode of operation. Devices compliant with Directive 2014/34/EU are permitted to be commissioned in accordance with the responsible supervisory authority. (cf. German Health and Safety at Work Regulations (BetrSichV), section 3, § 14)

<sup>1)</sup> Subgroups IIA, IIB and IIC must be specified for the types of protection Ex db, Ex eb and Ex ec described in this list in accordance with EN 60079-0.

<sup>2)</sup> The minimum ignition temperature depends on the composition and lies between 220 to 300 °C, over 300 °C in special cases.

**SIMOTICS XP 1MB1, 1MB5 explosion-protected motors**

Orientation

**Overview****Device marking**

The equipment group and category are specified in the device marking.

The device marking is defined as follows:

e.g. CE 0158 II 2G Ex eb IIC T3 Gb

- **CE** conformity marking

CE stands for "Communautés Européennes"  
(European Communities)

The manufacturer of the explosion-protected devices declares by means of CE marking that the relevant product has been manufactured in accordance with all applicable regulations and requirements of the EU and the requirements laid down in Directive 2014/34/EU and the product has been subjected to the relevant conformity evaluation process.

- **0158** identification number of the inspecting authority (DEKRA)
- Marking for prevention of explosions in accordance with Directive 2014/34/EU

**Example "increased safety":**

CE marking

Number of the certifying "notified" body (0158 = DEKRA)

Explosion protection marking

Equipment group:  
I = Underground  
II = All other areasCategory:  
2 (Zone 1/21)  
3 (Zone 2/22)Ex atmosphere  
G = Gas  
D = Dust

Explosion-protected equipment

Type of protection Ex db, db eb, eb, ec, tb or tc (db eb = motor housing Ex db with terminal box Ex eb)

Explosion group and explosion subgroup  
II = Gas (IIA, IIB or IIC)  
III = Dust (IIIA, IIIB or IIIC)

Temperature class with max. surface temperature

T1 = 450 °C      T4 = 135 °C  
T2 = 300 °C      T5 = 100 °C  
T3 = 200 °C      T6 = 85 °C

Equipment protection level (G = Gas; D = Dust):

- <sup>1)</sup> Highest explosion group IIC includes IIB and IIA.  
IIIA stands for lint, IIB for non-conductive dust and IIIC for conductive dust. 1MB155, 1MB555 motors optionally with Ex db terminal box.
- <sup>2)</sup> See EU type-examination certificate.
- <sup>3)</sup> The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.

- <sup>4)</sup> For 1MB1
  - IE1: T140 °C
  - IE2: T120 °C (except T130 °C for 1MB1.11-1AD5, 1MB1.11-3AD6, 1MB1.21-1AD5 and 1MB1.21-3AD6)
  - IE3: T120 °C.
- For 1MB5 frame sizes 400 and 450: T125 °C.

**SIMOTICS XP 1MB1, 1MB5 explosion-protected motors**

Orientation

**Benefits**

The explosion-protected motors from Siemens offer the user numerous advantages:

- The motors are designed and constructed in accordance with Directive 2014/34/EU. As product supplier, Siemens accepts responsibility for compliance with the applicable product standards for the selected equipment.
- By using this product, the plant operating company complies with Directive 1999/92/EC in accordance with Appendix II B (ATEX 137 previously ATEX 118a). The plant manufacturer or plant operating company is responsible for correct selection and proper usage of the equipment.
- Comprehensive series of Ex motors for protection against gas and dust.
- Individual versions of motors are possible thanks to the numerous catalog options.
- Further special versions are possible on request.
- Declarations of compliance with the order 2.1 are available for a defined spectrum of Siemens motors/converters.
- The operating instructions are available in all 23 official EU languages as well as Russian, Turkish and Chinese.
- Certificates:  
ATEX, IECEEx, CQST, EACEx

**For applications in harsh environments:  
SIMOTICS XP motors with a cast-iron housing**The right motor for various challenges

The following motor series are available with cast-iron housings for applications in harsh, hazardous environments:

- Basic Line:  
Rugged, reliable motors for machine construction
- Performance Line:  
Motors for the process industry with reinforced bearings and a more rugged coating – for requirements that extend beyond the Basic Line

## Comparison: Basic Line versus Performance Line

Function	<b>Basic Line – 1MB15</b>	<b>Performance Line – 1MB16</b>
Bearing size	62, 63 from frame size 280 upwards	63
Relubrication	Optional, standard from frame size 280 upwards	Standard from frame size 160 upwards, optional for frame sizes 100 to 132
Paint system	Standard paint finish, corrosivity category C2	Special paint finish, corrosivity category C3
Drainage	Drain plug from frame size 100 upwards	Drain plug from frame size 100 upwards
Rating plate made of stainless steel	Standard from frame size 225 upwards, optional for frame sizes 71 to 200	Standard from frame size 100 upwards
Motor protection	Optional	PTC
Fan cover	Steel	Steel
Warranty	12 months	36 months

**Application**

The explosion-protected motors are used in the following sectors to prevent explosion hazards that result in serious injury to persons and severe damage to equipment.

- Chemical and petrochemical industry
- Production of mineral oil and gas
- Gas works
- Gas utility companies

- Gas stations
- Coking plants
- Mills (e.g. grain, solids)
- Sewage treatment plants
- Wood processing (e.g. sawdust, tree resin)
- Other industries subject to explosion hazards

5

**Technical specifications****General information**

Ex motors are suitable for operation in electrical power systems with a voltage tolerance of  $\pm 10\%$ .

Ex motors in vertical type of construction with shaft extension pointing down must have a protective cover.

Standard certificate: EU type-examination certificate (ATEX) and EU declaration of conformity, optionally IECEEx, CQST and EACEx.

Note:

For all explosion-protected motors, designs according to UL and CSA are not possible.

Operating instructions are supplied as standard with explosion-protected motors in English and German. Translations are also available in all the other official EU languages as well as in Russian, Turkish, and Chinese online and on DVD.

Ambient temperature

- Standard:  $-20$  to  $+40$  °C
- Optional:  $-40$  to  $+40$  °C (order code **D03**)
- Optional:  $-20$  to  $+60$  °C (order codes **N05, N06, N07, N08**)

From 40 °C, the power is reduced. Other temperatures are available on request.

Note on Ex eb (1MB1.4):

Order codes **N05, N06, N07, N08** currently on request.

Motor connection

Certified metric cable glands/sealing plugs are included in the scope of supply of 1MB1 and 1MB5 motors.

The certificates for the motors for hazardous areas are stored with the documentation in the DT Configurator.

Certified motor protection switches/tripping units must always be used for motor protection, see Catalog IC 10.

# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Technical specifications

#### Type of protection "Dust explosion protection" Ex tb, Ex tc acc. to IEC/EN 60079-31 for use in Zone 21, Zone 22.

The types of protection **Ex tb** and **Ex tc** apply to electrical equipment protected using a housing and with limited surface temperature for use in areas in which combustible dust can be present in concentration levels that could cause a fire or an explosion.

Measures are taken to prevent impermissibly high temperatures and to prevent sparks or arcs from occurring on external components of the motor.

**Ex tb** motors are used in areas where it is expected that an explosive atmosphere comprising dust/air mixtures will be present occasionally and for a short period. These motors are assigned to Equipment Group II – Category 2D (corresponding to Zone 21). SIMOTICS XP motors with type of protection Ex tb are intended for group IIIC, i.e. they are permitted for operation in environments with conductive and non-conductive dust.

**Ex tc** motors are used in areas where it is expected that a potentially-explosive atmosphere will be caused by dust that is stirred up. If this does occur, in all probability rarely and for a short period. These motors are assigned to Equipment Group II – Category 3D (corresponding to Zone 22). SIMOTICS XP motors with type of protection Ex tc are intended for group IIIB as a general rule, i.e. they are only permitted for operation in environments with non-conductive dust.

#### Ex tb IIIC T120 °C Gb for use in Zone 21:

Design for Zone 21, as well as Zone 22 for conductive dust (degree of protection: IP65) equipment category 2D. Motors Ex tb IIIC T120 °C Db<sup>1)</sup>: 1MB1.1 and 1MB5.1 are suitable for use in explosive dust atmospheres with conductive or non-conductive dust that are present occasionally (Zone 21) or rarely (Zone 22). For rated operation, the surface temperature is 120 °C<sup>1)</sup>.

#### Ex tc IIIB T120 °C Gc for use in Zone 22:

Version for Zone 22 with non-conductive dust (degree of protection IP55) equipment category 3D. Motors Ex tc IIIB T120 °C Dc<sup>1)</sup>: 1MB1.2 and 1MB5.2 are suitable for use in explosive dust atmospheres with non-conductive dust that are present rarely (Zone 22). For rated operation, the surface temperature is 120 °C<sup>1)</sup>.

The motors have a terminal box, a sealing system, an external grounding terminal, a metal fan cover and a metal external fan according to standard IEC/EN 60079-0.

Identification on the rating plate:

- Zone 21: II 2D Ex tb IIIC T120 °C Db<sup>1)</sup>
- Zone 22: II 3D Ex tc IIIB T120 °C Dc<sup>1)</sup>

Number of the EU type-examination certificate

Pole-changing versions:

- Ex tb (Zone 21): Not possible
- Ex tc (Zone 22): Possible on request.

<sup>1)</sup> IE1: T140 °C  
IE2: T120 °C (except T130 °C for 1MB1.11-1AD5, 1MB1.11-3AD6, 1MB1.21-1AD5 and 1MB1.21-3AD6)  
IE3: T120 °C

#### Type of protection "increased safety" Ex ec acc. to IEC/EN 60079-7 for use in Zone 2

Type of protection **Ex ec** ensures that a motor in normal operation as well as when operated under deviating conditions as specified in the standard is not able to ignite a surrounding explosive gas atmosphere. The maximum surface temperature that can occur during operation must be below the limit temperature of the temperature class marked on the motor, e.g. T3.

Measures are taken to prevent impermissibly high temperatures and to prevent sparks or arcs from occurring on the inside and on external components of the motor.

Motors with type of protection **Ex ec** are used in an explosive atmosphere where this atmosphere is expected to reach a level that poses a risk **only rarely** and then also **only for a short period**. These motors are assigned to Equipment Group II – Category 3G (corresponding to Zone 2).

Ex ec motors can additionally optionally have type of protection Ex tc with Group IIIB (non-conductive dust) acc. to IEC/EN 60079-31 for use in Zone 22 (present rarely).

#### Ex ec IIC T3 Gc

→ Standard version for paint film thicknesses < 200 µm.

#### Optional Ex ec IIIB T3 Gc (order code B31)

→ Optional version for paint film thicknesses > 200 µm to < 2 mm.

For further information about paint and paint film thicknesses, see page 1/14 onwards.

Optional type of protection **Ex ec/Ex tc** for use in Zone 2/22<sup>2)</sup>

The motors must be ordered with:

Version additionally for dust Ex tc - Zone 22 – order code **B30**<sup>2)</sup>

Motors

- Ex ec IIC T3 Gc: 1MB1.3 and 1MB5.3
  - Ex ec IIIB T3 Gc: 1MB1.3 and 1MB5.3 (order code **B31**)
- have a terminal box (similar to Ex eb), a sealing system, an external grounding terminal and a metal fan cover according to standard IEC/EN 60079-0. The temperature class is T1-T3.

With optional order with order code **B30** additionally a metal external fan.

The combination **B30+B31** is possible.

Identification on the rating plate:

- Zone 2: II 3G Ex ec IIC T3 Gc
- Zone 2/22: II 3G Ex ec IIIC T3 Gc  
 II 3D Ex tc IIIB T120 °C Dc<sup>2)</sup>

Number of the EU type-examination certificate

Please inquire in the case of:

- Utilization according to temperature class 155 (F)
- For pole-changing versions

<sup>2)</sup> Hybrid mixtures:

For certification of the motors according to the usual standards, the suitability test for use in explosive gas atmospheres is performed separately from the suitability test for use in explosive dust atmospheres. This enables marking for explosive gas or dust atmospheres, but not for use of the motor in hybrid mixtures.

The owner can certify the motor for hybrid mixtures despite the statements in the Operating Instructions. Information on operation in hybrid mixtures is provided in IEC 60079-14:2013 Annex M.

## Technical specifications

### Type of protection "increased safety" Ex eb acc. to IEC/EN 60079-7 for use in Zone 1

With type of protection **Ex eb**, additional measures are taken to prevent the possibility of high temperatures and to prevent sparks or arcs from occurring on the inside and on external components of the motor.

In case of a malfunction, the drive must be switched off within the time  $t_E$ . This ensures that none of the motor's components reaches the ignition temperature of the surrounding gas in the event of a malfunction.

Motors with type of protection **Ex eb** are used in an explosive atmosphere where a hazardous explosive atmosphere is expected occasionally to reach a level that poses a risk. These motors are assigned to Equipment Group II – Category 2G (corresponding to Zone 1). They ensure a high degree of safety.

Optionally Ex eb motors can additionally have type of protection Ex tb with Group IIIC (conductive and non-conductive dust) acc. to IEC/EN 60079-31 for use in Zone 21 (occasionally present).

#### Ex eb IIC T3 Gb

→ Standard version for paint film thicknesses < 200 µm.

Optional Ex eb IIB T3 Gb (order code **B31**)

→ Optional version for paint film thicknesses > 200 µm to < 2 mm.

For further information about paint and paint film thicknesses, see page 1/14 onwards.

Optional type of protection Ex eb/Ex tb for use in Zone 1/21<sup>2)</sup>

The motors must be ordered with:

Version additionally for dust Ex tb - Zone 21 – order code **B32**<sup>2)</sup>

Motors

- Ex eb IIC T3 Gb: 1MB1.4 and 1MB5.4
- Ex eb IIB T3 Gb: 1MB1.4 and 1MB5.4 (order code **B31**)

have a terminal box (Ex eb), a sealing system, an external grounding terminal and a metal fan cover according to standard IEC/EN 60079-0. The winding is specially designed and tested for the temperature class T1/T2 or T3.

With optional order with order code **B32** additionally a metal external fan.

The combination **B32+B31** is possible.

Identification on the rating plate:

- Zone 1: II 2G Ex eb IIC T3 Gb
- Zone 1/21: II 2G Ex eb IIC T3 Gb  
 II 2D Ex tb IIIC T120 °C Db<sup>1)</sup>

Number of the EU type-examination certificate

Please inquire in the case of:

- Increased coolant temperatures
- Marine certificates

<sup>1)</sup> IE1: T140 °C  
IE2: T120 °C (except T130 °C for 1MB1.11-1AD5, 1MB1.11-3AD6, 1MB1.21-1AD5 and 1MB1.21-3AD6)  
IE3: T120 °C

<sup>2)</sup> Hybrid mixtures:  
For certification of the motors according to the usual standards, the suitability test for use in explosive gas atmospheres is performed separately from the suitability test for use in explosive dust atmospheres. This enables marking for explosive gas or dust atmospheres, but not for use of the motor in hybrid mixtures.

The owner can certify the motor for hybrid mixtures despite the statements in the Operating Instructions. Information on operation in hybrid mixtures is provided in IEC 60079-14:2013 Annex M.

### Type of protection "flameproof enclosure" Ex db eb and Ex db acc. to IEC/EN 60079-1 for use in Zone 1

Type of protection **Ex db** is achieved by ensuring that any explosion is contained within the motor. The housing must resist the pressure of the explosion and also prevent ignition from the internal to the external atmospheres.

Motors with type of protection **Ex db** are used in an explosive atmosphere where a hazardous explosive atmosphere is expected occasionally to reach a level that poses a risk. These motors are assigned to Equipment Group II – Category 2G (corresponding to Zone 1). They ensure a high degree of safety. To define the risk posed by a potentially explosive gas, the minimum ignition temperature of a dust cloud is required as well as details of the possibility of a flame exiting through a narrow slit in the motor housing. This is achieved by classification in explosion groups IIA, IIB and IIC, whereby IIC represents the highest requirements (see the table "Assignment of combustible gases and vapors").

#### Ex db eb IIC T4 Gb

→ Standard version for paint film thicknesses < 200 µm.

Optional Ex db eb IIB T4 Gb (order code **B31**)

→ Optional version for paint film thicknesses > 200 µm to < 2 mm.

Alternatively, a paint finish certified in accordance with the Ex Directive can be used. For further information about paint and paint film thicknesses, see page 1/14 onwards.

Optional type of protection

- **Ex db eb/Ex tb** for use in Zone 1/21<sup>2)</sup>
- **Ex db eb/Ex tc** for use in Zone 1/22<sup>2)</sup>

The motors must be ordered with:

- Version additionally for dust Ex tb IIIC - Zone 21 – order code **B32**<sup>2)</sup>
- Version additionally for dust Ex tb IIIB - Zone 22 – order code **B30**<sup>2)</sup>

Motors

- Ex db eb IIC T4 Gb: 1MB155 and 1MB555
- Ex db eb IIB T4 Gb: 1MB155 and 1MB555 (order code **B31**)

are suitable for use in explosive gas atmospheres with occasionally present gases or vapors in Zone 1 for temperature classes T1 to T4. The maximum surface temperature that can occur during operation must lie below the limit temperature of the respective temperature class.

The motors have a terminal box (Ex eb), optional Ex db (order code **R48**), a sealing system, an external grounding terminal and a metal fan cover according to standard IEC/EN 60079-0. The motor housing is designed with type of protection "flameproof enclosure" and has temperature class T4.

With optional order with order code **B32** additionally a metal external fan.

The combination **B32+B31** is possible.

Identification on the rating plate:

- Zone 1: II 2G Ex db eb IIC T4 Gb or  
 II 2G Ex db IIC T4 Gb (R48)

- Zone 1/21: II 2G Ex db eb IIC T4 Gb  
 II 2D Ex tb IIIC T130 °C Db<sup>2)</sup>

Number of the EU type-examination certificate

Please inquire in the case of: Reduced starting currents

# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Technical specifications

#### **Line operation**

##### Insulation system

The insulation system of SIMOTICS XP 1MB1 and 1MB5 motors is suitable for line voltages up to 690 V. The connection system (terminal box, terminals) is also designed for this rated voltage.

The motors are equipped with 6 terminals. They can therefore be operated in any star or delta connection. If a voltage variant with dual voltage e.g. 400V $\Delta$ /690VY is selected, the rated data of all voltage levels will be stamped on the rating plate.

SIMOTICS XP 1MB1 and 1MB5 motors have an insulation system with a thermal class of 155 °C (F). Utilization at rated operation corresponds to thermal class 130 °C (B).

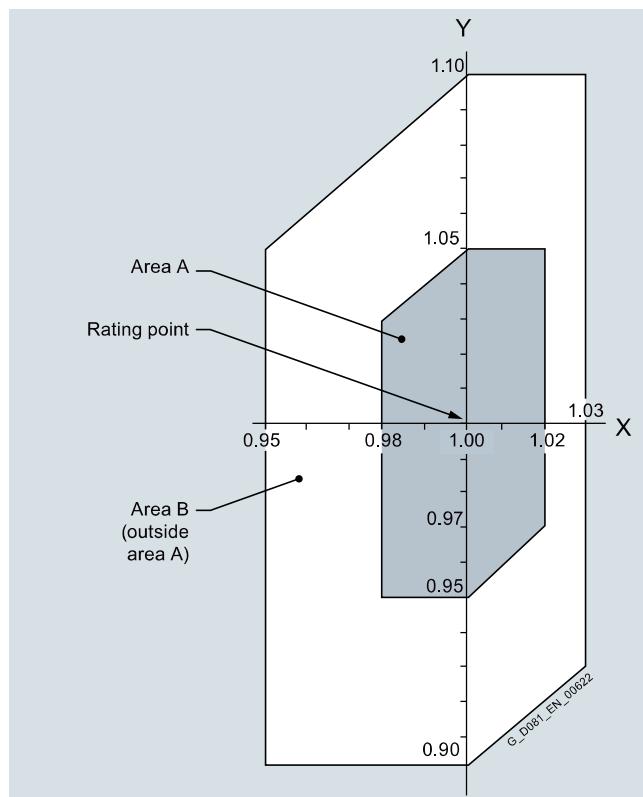

For deviations in use for frame sizes 400 and 450, see "Winding and insulation version with regard to temperature class", on page 1/27.

##### Voltage tolerances

The motors are suitable for operation with voltage and frequency tolerances according to EN 60034-1.

In addition, tests are to be performed to ensure that the permissible temperature limits for the inner and outer surfaces of the motor according to the relevant standard are not exceeded during continuous operation at the voltage limits ( $\pm 10\%$ ).

For 8-pole motors of frame size 450, continuous duty is only possible with  $\pm 5\%$ .

Y-axis: Voltage tolerance  
Z-axis: Frequency tolerance

#### Motor protection

Motor protection must always be realized with a certified motor circuit breaker, see Catalog IC 10, taking into account the inrush current ratio and the maximum startup time.

##### Note:

For Ex eb motors in line operation, motor protection is alternatively possible as protection by PTC thermistors only, taking into account the inrush current ratio  $I_{\text{startup}}/I_{\text{rated}}$  and time  $t_E$ . When the motor shaft is locked, the motor circuit breaker must disconnect the motor from the line supply within time  $t_E$  so that the maximum ignition temperature of the specific temperature class is not exceeded. Optionally on some motors up to frame size 200, full motor protection with a PTC thermistor is possible. The information about full motor protection with a PTC thermistor is documented in the EU type-examination certificate. The tripping devices required for this purpose, see Catalog IC 10, must always be certified.

#### **Operation on a frequency converter**

##### General information

Basically, explosion-protected motors (except for Ex eb) can be fed from converters. Particular attention must be paid to the interaction between the motor and converter system, especially with regard to the following aspects:

- The harmonic content of the supply voltage raises the motor temperature, so the motor power must be reduced
- Less cooling of the motor at speeds below the rated speed
- Voltage stress on the motor winding
- Bearing currents

The general use of high-quality insulation systems enables converter operation. When operated with a converter, the motor with explosion protection must be fitted with PTC thermistors. These are installed in the stator winding and, in combination with an ex-certified trip unit (EU type-examination certificate), they perform sole motor protection in the case of converter operation.

The permissible speed and torque range is stamped on an additional rating plate.

These rated operating points stamped on the additional rating plate apply for both constant torque drives and fluid-flow machines with a square-law load torque. For constant torque drives, the resulting thermal motor torques in the positioning range must be taken into account.

During converter operation, the reduced torques for constant torque and drives for fans, pumps and compressors must be observed due to the harmonic content of the supply. This data is available in the "Drive Technology Configurator" (DT Configurator) at [www.siemens.com/dtconfigurator](http://www.siemens.com/dtconfigurator)

**SIMOTICS XP 1MB1, 1MB5 explosion-protected motors**

Orientation

**Technical specifications**

Higher noise levels must be expected than for 50 Hz line operation for motors operating with converters due to the harmonic content of the supply.

Maximum voltage stress on the motor winding in converter operation:

Frame sizes: 71 to 355:

- $\hat{U}_{\text{phase-to-phase}} \leq 1500 \text{ V}$  (3000 V peak-peak values ( $V_{\text{pk/pk}}$ ))
- $\hat{U}_{\text{phase-to-ground}} \leq 1100 \text{ V}$  (2200 V peak-peak values ( $V_{\text{pk/pk}}$ ))

The following generally applies to Siemens converters (SINAMICS):

- $U_{\text{line}} = 480 \text{ V} \pm 10 \%$  (BLM = Basic Line Module; DFE = Direct Front End)
- $U_{\text{line}} \leq 480 \text{ V} \pm 10 \%$  (ALM = Active Line Module; AFE = Active Front End);  $U_{\text{dc}} < 720 \text{ V}$
- $U_{\text{line}} = 690 \text{ V} \pm 10 \%$  (only permissible with a suitable dv/dt or sine-wave filter)

Ex db: Certificate valid for general PWM converter  
Ex ec, Ex tb, Ex tc certificate valid only in combination with a SINAMICS G180 that has an amplified dv/dt filter (standard option G180: **L10**).

Motors of the 1MB55 series with frame sizes 400 and 450 with the IVIC-C advanced insulation system:

- $\hat{U}_{\text{phase-to-phase}} \leq 1600 \text{ V}$  (3200 V peak-peak values ( $V_{\text{pk/pk}}$ ))
- $\hat{U}_{\text{phase-to-ground}} \leq 1400 \text{ V}$  (2800 V peak-peak values ( $V_{\text{pk/pk}}$ ))

Motors of the 1MB8 series with frame sizes 71 to 450 with the IVIC-C premium insulation system:

- $\hat{U}_{\text{phase-to-phase}} \leq 2200 \text{ V}$  (4400 V peak-peak values ( $V_{\text{pk/pk}}$ ))
- $\hat{U}_{\text{phase-to-ground}} \leq 1500 \text{ V}$  (3000 V peak-peak values ( $V_{\text{pk/pk}}$ ))

Motors with the advanced insulation system can be operated on the converter without an additional dv/dt or sine-wave filter if the following limits are observed:

- $U_{\text{line}} \leq 480 \text{ V}$
- $U_{\text{DC}} \leq 720 \text{ V}$

Converter operation requires a dv/dt or sine-wave filter or a motor with PREMIUM insulation system (motor types 1MB18, or 1MB58). if at least one of the following limits is exceeded:

- $U_{\text{line}} > 480 \text{ V}$
- $U_{\text{DC}} > 720 \text{ V}$

The voltage limits are chosen such that safe operation is ensured without knowledge of the converter or the converter infeed. If it is ensured that the motor is powered through a converter with uncontrolled infeed (e.g. SINAMICS G), the 1MB15 and 1MB55 motors can be operated up to  $U_{\text{line}} = 480 \text{ V}$  as an exception because the limits  $U_{\text{DC}} \leq 720 \text{ V}$  are then observed.

In configuration of the drive system, it must be considered that the DC-link voltage UDC exceeds the limit of  $U_{\text{DC, max}} = 720 \text{ V}$  (continuous duty) during braking where converters without energy recovery capability, such as SINAMICS G, are used. Exceeding this limit is permissible for a short time, for example, if the  $U_{\text{DC, max}}$  controller or braking chopper ensures that the DC-link voltage does not exceed the following limits:

- 1MB.5 (advanced):  $U_{\text{DC, max}} = 890 \text{ V}$  (short-time duty)
- 1MB.8 (premium):  $U_{\text{DC, max}} = 1225 \text{ V}$  (short-time duty)

Further configuration notes are documented in the declaration of compliance with the order 2.1 and in the EU type-examination certificates.

**Order processing of 1MB1, 1MB5 motors with Ex db, Ex ec, Ex tb and Ex tc for converter operation****PTC thermistor**

For converter operation, Ex motors must always be monitored using PTC thermistors. The motors must therefore be ordered with the 15th position of the Article No.

- **B** – PTC thermistor for tripping – or alternatively
- **C** – PTC thermistor for alarm and tripping.

General information regarding the PTC thermistors:

- **B** in 15th position of the Article No.:  
The motors are equipped with 3 PTC thermistors for tripping in the motor winding.
- **C** in 15th position of the Article No.:  
The motors are equipped with 3 PTC thermistors for alarm and 3 PTC thermistors for tripping in the motor winding.

**Certified tripping units are required for this purpose, see Catalog IC 10.**

**To ensure unambiguous order handling for the voltage, each approved voltage code/voltage order code is assigned only "one" voltage/frequency, as seen below:**

Voltage code 12th and 13th position of the Article No.	Order code	Line frequency	Line voltage
<b>27</b>	–	50 Hz	500 VY, 50 Hz power
<b>40</b>	–	50 Hz	500 V $\Delta$ , 50 Hz power

# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Technical specifications

Converter operation specially for motors in type of protection "Ex ec" (Zone 2) and VIK-Ex ec version

IEC/EN 60079-7 specifies that the motor and converter must be tested as a unit (individual test). The individual test is available for motors of "Ex ec" type of protection on the specified converters SINAMICS G, SINAMICS S and SINAMICS V20. For details, see declaration of compliance with the order 2.1. Not possible for frame sizes 400 and 450.

Individual testing can be performed for non-Siemens converters on request (additional charge). The customer may be required to supply the external converter for individual tests.

The test will cost more when using non-Siemens converters (especially on commissioning). Commissioning personnel must be provided by the customer for setup and operation during the test, if required.

Converter operation specially for motors in type of protection "Ex tb" (Zone 21) and "Ex tc" (Zone 22)<sup>1)</sup>

The drive system comprising motors protected against dust explosions operating on SINAMICS G, SINAMICS S and SINAMICS V20 converters has been tested. For details, see declaration of compliance with the order 2.1. Please inquire about operation with non-Siemens converters. Not possible for frame sizes 400 and 450.

Converter operation specially for motors with type of protection "Ex ec/Ex tc" (Zone 2/22)<sup>2)</sup>

For the 1MB..3 Ex ec motors, the order code **B30** version (IP55) for Zones 2 and 22 must also be specified in the case of non-conductive dust. Declaration of compliance with the order 2.1 analogous to that for Zones 2, 21 and 22.

Please inquire about non-Siemens converters.

1MB1, 1MB5 in Ex ec, Ex tb and Ex tc:

Selection of the frequency converters

The SINAMICS frequency converters are categorized into 2 product groups (order code **B40** and **B41**). Each product group is a data record with motor operating data each assigned to one frequency converter. The converter type is stamped on the rating plate. Alternative, approved SINAMICS converters can be selected, by adding the order code **Y68**.

Product group 1 (basic version):

Order code B40 - version for converter operation in basic version with operating data SINAMICS G120 with PM240-2

Product group 1 (alternative SINAMICS converter):

Order codes **B40 + Y68**

Operating data such as the **B40** order code with alternative SINAMICS converter on the rating plate:

- **Y68** with plain text (C-text) G120 with PM230
- **Y68** with plain text (C-text) G120 with PM240
- **Y68** with plain text (C-text) G120C
- **Y68** with plain text (C-text) G120P with PM230
- **Y68** with plain text (C-text) G120P with PM240-2
- **Y68** with plain text (C-text) G120P with PM240P-2
- **Y68** with plain text (C-text) G120P with PM330
- **Y68** with plain text (C-text) G130
- **Y68** with plain text (C-text) G150
- **Y68** with plain text (C-text) G180
- **Y68** with plain text (C-text) S120 (BLM/SLM)
- **Y68** with plain text (C-text) V20

<sup>1)</sup> Zone 21 includes conductive and non-conductive dust.

Product group 2 (basic version):

Order code **B41** - version for converter operation in basic version with operating data SINAMICS S150.

Product group 2 (alternative SINAMICS converter):

Order codes **B41 + Y68**

Operating data such as the **B41** order code with alternative SINAMICS converter on the rating plate:

- Order code **Y68** with plain text (C-text) S120 (ALM)

1MB155 and 1MB555 with Ex db, Ex db eb:

Selection of the frequency converter

The SIMOTICS 1MB..5. motors are suitable and certified for operation on the PWM frequency converter. The only distinction made is whether the maximum permitted temperature rise of the winding is 130(B) – order code **B43** or 155(F) – order code **B44**. The power with utilization of 155(F) is approx. 10 % higher than with utilization 130(B) and the order code **B43** is usually approximately equal to the line power.

Combination with SINAMICS converters as stated in the list under Ex ec has been pretested and is recommended. For other converter types and non-Siemens converters, operation according to the Ex specifications is possible if the requirements of the certificate are met.

Defining the power for converter operation

The optimum power data are marked on the motors. These data are universally valid and can be viewed in the "Drive Technology Configurator" (DT Configurator) and used as the basis for configuration.

In specific applications, e.g. for very long motor cables, if a sine-wave filter is being used - or for converter types that cannot reach the full rated voltage at rated frequency as a result of the inherent design, then at rated voltage there is a voltage drop at the motor terminals. Under this operating condition, in order that the motor temperature rise is not inadmissibly high, at the maximum permissible current, it is possible that the motor power is reduced (derating). For example, for use of sine-wave filters and the consequential reduction of the motor voltage by 10 to 15 %, the permissible power ratings for converter operation must be similarly reduced by 10 to 15 % at rated frequency because the corner frequency for determining the power is reduced accordingly. Operation below the reduced corner frequency is possible without reducing the torque.

<sup>2)</sup> The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.

**SIMOTICS XP 1MB1, 1MB5 explosion-protected motors**

## Orientation

**Technical specifications****Rating plate**

The operating data for line operation is specified on the rating plate - on an additional rating plate, according to the selected product, 4 rated operating points are possible in the following variants:

Possible variants	Rated operating points in Hz				Additional identification code voltage code 12th and 13th position of the Article No. and order code
50 Hz field weakening range	5	25	50	$f_{max}$	50 Hz voltage: e.g. <b>'90'</b> and <b>M4A</b>
60 Hz field weakening range	6	30	60	$f_{max}$	60 Hz voltage: e.g. <b>'90'</b> and <b>M1E</b>
87 Hz characteristic	5	25	87	$f_{max}$	87 Hz at 400 V $\Delta$ : <b>'90'</b> and <b>M3A</b>

$f_{max}$  see page 5/17 "Mechanical limit speeds of the SIMOTICS XP 1MB15, 1MB5 Ex db, Ex ec, Ex tb and Ex tc explosion-protected motors".

Other voltages can be selected with the voltage code **90** (12th, 13th position of the Article No.) and order code **M1Y**. Special winding.

Special case: Line operation data in two voltage levels plus converter data in one voltage level: **M1Y + Y80** e.g. 400 V $\Delta$ /690 VY 50Hz DOL + 400 V $\Delta$  VSD

**Insulated bearings****Frame sizes 225 and 250:**

For converter operation it is recommended that an "insulated bearing cartridge NDE" – order code **L51** be used.

**Frame sizes 280 to 355:**

For ordering with order codes **B40/B41/B43/B44**, the "insulated bearing cartridge NDE" is included as standard.

**Frame sizes 400 and 450:**

For ordering with order codes **B40/B41/B43**, the "insulated bearing cartridge NDE" is included as standard.

The data on the separate rating plate for converter operation apply to both constant torque drives and pump/fan/compressor drives. For a constant torque drive, the resulting thermal motor torques in the positioning range must be taken into account.

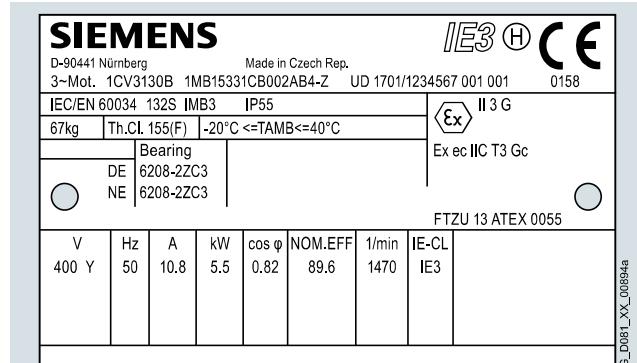

**Example motor ID:**

Motor rating plate with line operation data and additional rating plate with converter operation data:

380 Y	100	8.4	4.10	0.85	13.1	2955	

G\_D081\_XX\_00895

For all motors, an additional rating plate complete with the operating data for the motor on the converter is fitted.

The converter type and the associated operating data are on the rating plate.

The reasons for stamping the converter type on the additional rating plate are the different control levels for the converter output voltage, pulse frequency, output frequency, harmonic content and the associated derating for the motor.

For compliance with the permissible temperature class 130 (B), derating is necessary for converter operation below the power for direct line operation! The reduction in torque depends on the choice of converter type. The data can be viewed in the "Drive Technology Configurator" (DT Configurator) and used as the basis for configuration.

The declaration of compliance with the order 2.1 for the specified converters is stored with the documentation for low-voltage motors in the "Drive Technology Configurator" (DT Configurator).

# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Technical specifications

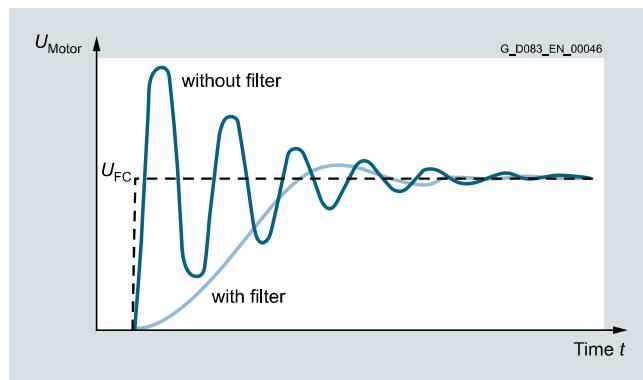

#### Configuration notes for converter operation

##### Permissible voltage stress

More stress is placed on the insulation of the motor winding with converter operation than with line operation. The voltage stress also depends on the type of converter used.

##### Voltage stress on a converter with pulse width modulation (PWM)

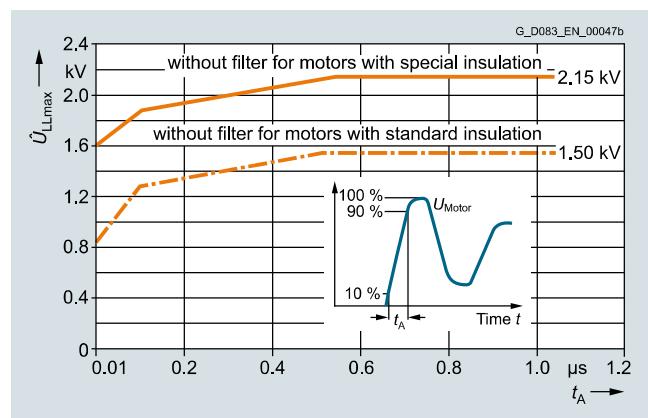

The PWM converter subjects the motor windings to wear and tear mainly by quickly applying voltage pulses. Each switching process of the converter releases a voltage wave onto the motor supply cable that can result in excessive motor voltages due to reflection (see diagram).

Typical progression of converter voltage  $U_{FC}$  and motor voltage  $U_{Motor}$  on the PWM converter (converter with and without output filter)

The maximum voltage is influenced by the rise time of the pulses and by the length of cable used between motor and converter. A dv/dt output filter at the converter can reduce the maximum motor voltage to uncritical values. If the permitted limits of the peak voltage for standard insulation 1500 V<sub>peak</sub> or for premium insulation 2200 V<sub>peak</sub> is exceeded in operation, premature motor failures can occur.

For SIMOTICS XP motors, the limits according to the certificate apply additionally and take precedence.

## Technical specifications

Individual drive check of variable speed drive (VSD) systems (IC411 self-ventilated motors) with configuration characteristics for converter operation – 1MB1/1MB5 motors (all types of protection).

Limits for example control ranges are listed in the power tables on the following pages. For individual drive checks, the following configuration characteristics apply to frame sizes 71 to 355.

For driven machine power or torque less than or equal to rated data, operation up to  $f_{\max}$  in accordance with the power tables is possible. This applies to configurations with any load torques and control ranges.

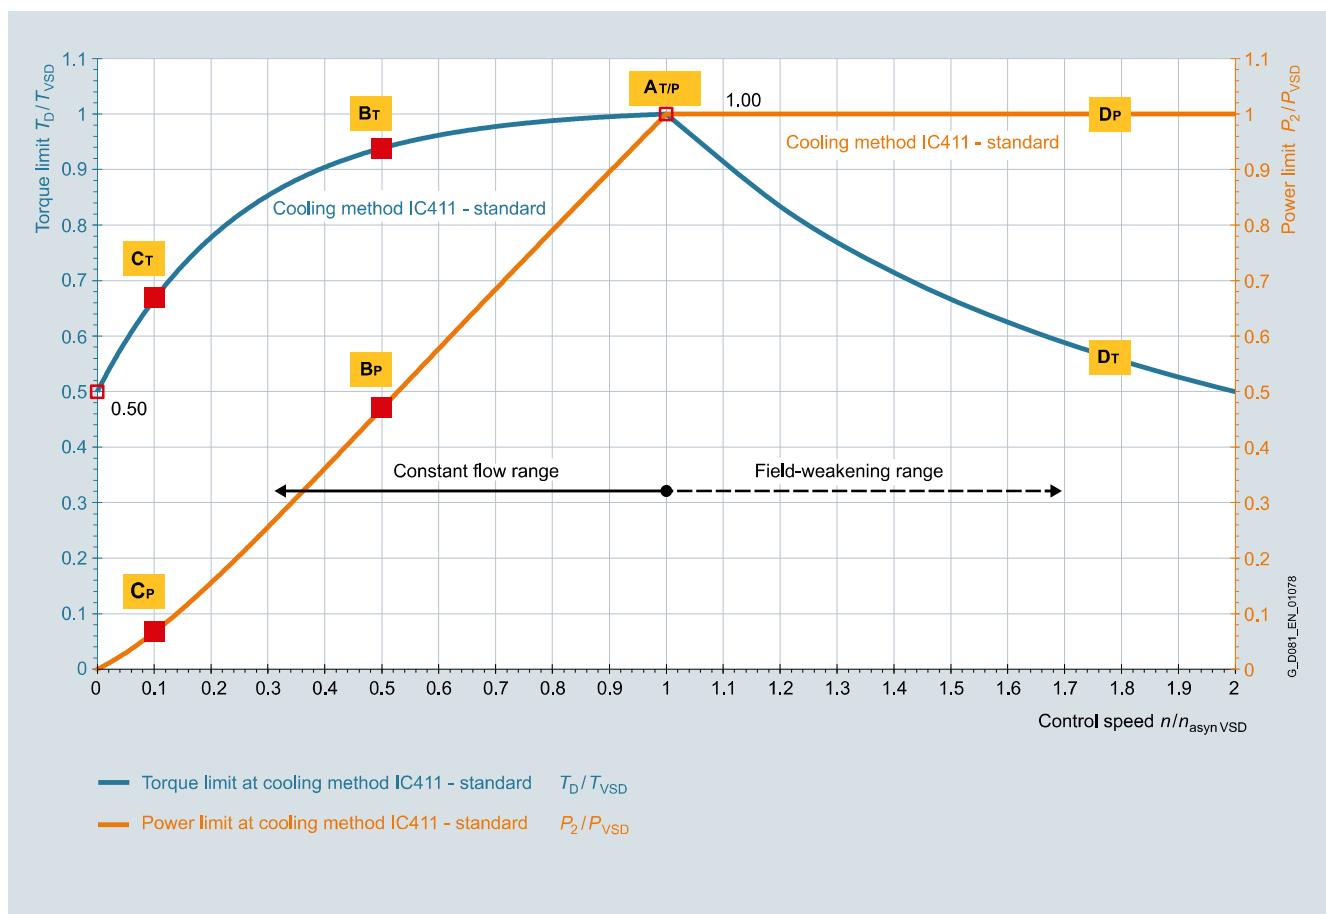

The maximum admissible speed in field weakening can be calculated by dividing  $f_{\max} \times 120$  by the motor's number of poles.

### Checking the feasibility of the required operating point

To do this, (derived from reference point A)

- The desired load/power  $P_2$  must be divided by the VSD power  $P_{VSD}$
- The desired control speed  $n$  must be divided by the VSD asynchronous speed  $n_{asyn\ VSD}$
- The desired load/torque  $T_D$  must be divided by the VSD torque  $T_{VSD}$ .

These calculated values should be checked afterwards against the following diagrams to determine whether the desired operating point (from speed 0) is below the VSD load/torque limit  $T_D/T_{VSD}$  and the load/power limit  $P_2/P_{VSD}$ .

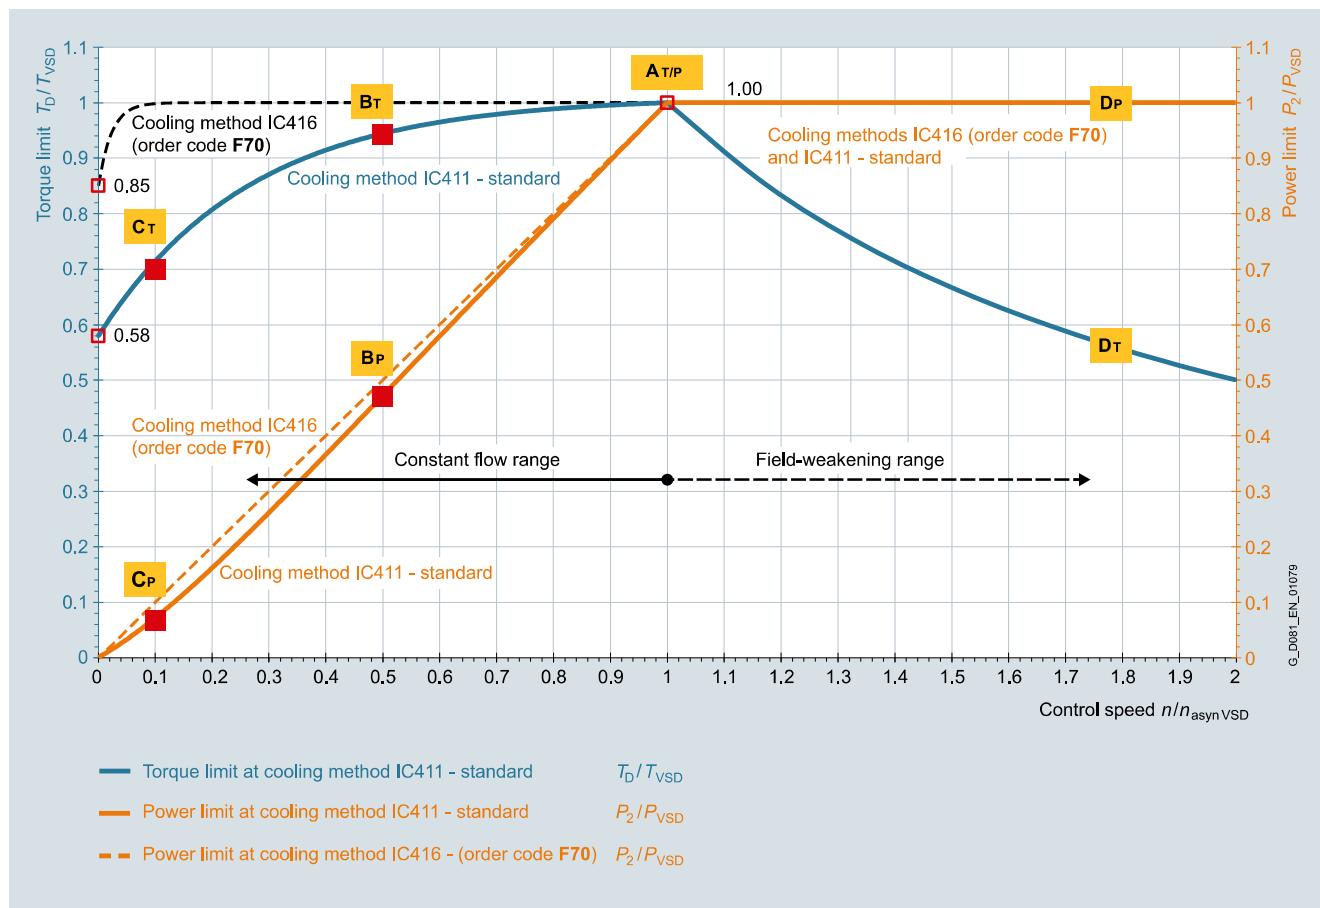

Configuration characteristics for frame sizes 71 to 200

- A<sub>M/P</sub>:** Reference point for general selecting/dimensioning  
**A<sub>P</sub>:** Typical load point for applications with square-law load torque, e.g. fans and pumps  
**B<sub>M/C\_M</sub>:** Typical load point for applications with constant load torque, e.g. hoisting gear, conveyor belts etc.  
**D<sub>M/D<sub>P</sub></sub>**: Typical load point for applications with increased speed/frequency

# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Technical specifications

#### Special technology

"Special technology" comprises technology that is compatible with explosion-protected motors.

Explosion-protected motors can be implemented in a broader range of applications when explosion-protected rotary pulse encoders or explosion-protected separately driven fans are mounted.

The use of a separately driven fan is recommended to increase motor utilization at low speeds and to limit noise generation at speeds significantly higher than the synchronous speed.

The following explosion-protected motor versions are available with explosion-protected rotary pulse encoders:

Type of protection	Motor type + order code	Frame size	Order code for explosion-protected rotary pulse encoder

#### Notes:

- The motor operating data with the explosion-protected separately driven fan is available in the "Drive Technology Configurator" (DT Configurator).
- Alternatively, explosion-protected separately driven fans can also be used in line operation for special applications.

## Technical specifications

### Explosion-protected rotary pulse encoder

The rotary pulse encoder can only be mounted on a standard non-drive end (NDE), i.e. a second shaft extension cannot be supplied.

By virtue of its design, the explosion-protected rotary pulse encoder does not have insulated bearings (please inquire).

The degree of protection of the rotary pulse encoder must be observed. The relevant data are stamped on the rating plate of the rotary pulse encoder.

Attaching an explosion-protected rotary pulse encoder increases the length of the motor by  $\Delta l$ .

For an explanation of the additional dimensions and weights, see "Dimensions and weights of explosion-protected rotary pulse encoders".

### LL 841 910 013 rotary pulse encoder (HTL version)

This encoder has a rugged construction and is therefore also suitable for difficult operating conditions. It is resistant to shock and vibration.

The LL 841 910 013 explosion-protected rotary pulse encoder is supplied with the already mounted ADS diagnostic system for early detection of errors in the encoder.

Order code **G30**

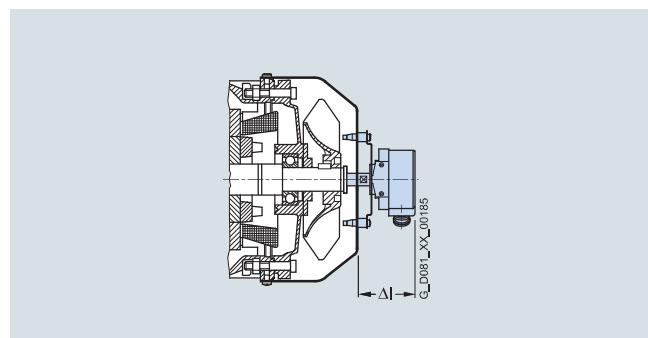

Technical specifications for LL 841 910 013 (HTL version)

<b>Supply voltage <math>U_B</math></b>	<b>+9 ... +30 V</b>
Current input without load	max. 80 mA
Admissible load current per output	40 mA
Pulses per revolution	1024
Outputs	6 short-circuit proof square-wave pulses A, A', B, B', 0, 0', high current HTL Floating switching output for ADS signal
Pulse offset between the two outputs	$90^\circ \pm 2.5^\circ$ el.
Output amplitude	$U_{\text{high}} > U_B - 4 \text{ V}$ $U_{\text{low}} < 2.5 \text{ V}$
Mark space ratio	$1:1 \pm 10\%$
Maximum frequency	100 kHz with 350 m cable length
Maximum speed	4200 rpm (the maximum permissible speed must be observed during the configuration)
Temperature range	-40 ... +70 °C
Degree of protection	IP65
Maximum adm. radial cantilever force	150 N
Maximum adm. axial force	100 N
Connection system	Terminal strips in encoder/cable connection M20 x 1.5 radial (screw terminals)
Weight, approx.	1.7 kg

A protective cover of non-corrosive sheet steel is available for the explosion-protected rotary pulse encoders from the "special technology".

For motors in the shaft heights

- 100 to 200: a protective cover is always provided
- 225 to 450: Order code **G43** –  
"Mechanical protection for encoder"  
(protective cover analogous to order code **H00**)

The length of the motor is also increased in the case of the following shaft heights:

- 100 to 200 by up to 146 mm
- 225 to 315 by up to 25 mm

# SIMOTICS XP 1MB1, 1MB5 explosion-protected motors

## Orientation

### Technical specifications

#### Explosion-protected separately driven fan

The use of a separately driven fan is recommended to increase motor utilization at low speeds or to limit noise generation at speeds significantly higher than the synchronous speed. Both of these results can only be achieved with converter operation. Please inquire about traction and vibratory operation.

In the case of explosion-protected motors, the explosion-protected separately driven fan is available already mounted.

Order code **F70**

Notes:

- The order code **F70** applies to all types of protection because the type of protection is already defined by the article number of the motor. Order code **F70** determines the additional charge for the separately driven fan in the assigned type of protection.
- The motor operating data with the explosion-protected separately driven fan is available in the "Drive Technology Configurator" (DT Configurator).

The supply voltage for the explosion-protected motors with separately driven fan is specified as follows:

Type 2CW2 has a wide-range voltage winding

(see page 5/21 "Technical specifications of separately driven fans for 1MB1 explosion-protected motors (frame sizes 100 to 200) in the Ex tc (Zone 22) and Ex ec (Zone 2) versions").

These explosion-protected motors with separately driven fan up to frame size 200 have a rated voltage (rated voltage range) with tolerances according to IEC/EN 60034-1, range A.

Technical specifications of separately driven fans for 1MB1.5 and 1MB5.5 explosion-protected motors (frame sizes 225 to 355) in the Ex db eb (Zone 1) versions

Frame size	Voltage V	Frequency Hz	$P_{\max}$ kW	$I_{\max}$ A
225	400	50	0.55	1.34
250				
280	460	60		1.23
315				
355	400	50	1.1	2.25
	460	60		1.98

A rating plate with the operating data is fitted to each explosion-protected motor with separately driven fan.

The type of protection of the explosion-protected motor with separately driven fan corresponds to that of the associated explosion-protected basic motor. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it.

Please inquire regarding coolant temperatures outside the range -20 to +40 °C.

The Ex ec/Ex tc motor with separately driven fan has the degree of protection IP55 as standard; Ex tb: IP65 (higher degrees of protection with Ex ec are available on request).

Motors with a separately driven fan must be equipped with a PTC thermistor as motor protection (15th position of the Article No.): In the event of a fault in the separately driven fan, the PTC thermistor must reliably trip the 1MB1 or 1MB5 explosion-protected motors.

For assignments and article numbers, see the tables "Technical specifications of separately driven fans for explosion-protected motors 1MB1..." on the following pages. A rating plate listing all the important data is fitted to the separately driven fan. Please inquire in the case of supply voltages outside of the rated voltage range. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it. The permissible coolant temperatures are  $CT_{\min}$  -20 °C and  $CT_{\max}$  +40 °C. Lower coolant temperatures are available on request.

When the separately driven fan is mounted, the length of the motor increases by  $\Delta l$ . For an explanation of the additional dimensions and weights, see "Dimensions and weights of explosion-protected separately driven fans".

## Technical specifications

### Version 1MB..5 motors (Ex db, Ex db eb) with mounted brake

The brake is located at drive-end of the motor and can be mounted with flange B5 or B14 depending on the motor – 14th position of the Article No. **F** (flange B5); **K** (flange B14).

The shaft extension is implemented in the same way as the standard shaft extension of the motor. A special shaft extension or special bearings are not possible.

The motor, including the brake, is available ATEX-certified as standard and optionally with IECEx (order code **D37**) and EACEx (order code **D35**).

The spring-operated brake (order code **F20**) is a single-disk brake with two friction surfaces. The compression springs produce the braking torque by means of friction that opposes the disk. The brake is released electromagnetically.

The degree of protection of the brake is IP66 (IEC/EN 60034-5 and IEC/EN 60079-0).

The braking voltage supply 24 V DC (order code **F10**), 230 V AC (order code **F11**) and 400 V AC (order code **F12**) have to be ordered together with order code **F20**.

In the standard version, the brake is equipped with a bimetal protection device for thermal protection with a limit value for the temperature class of the brake.

Dynamic application of the brake in accordance with the permissible energy and frequency of braking (duty cycles) can be determined by the formula "Calculation of the slipping time of the friction disk" and table "Frequency of braking".

For special operating characteristics in accordance with the permissible energy and the frequency of braking (braking cycles), calculation of new values by Siemens is necessary.

The possibility of manual release of the brake can be ordered optionally (order code **F50**). In this case, the brake can be released in the de-energized state (no lock).

Further options for controlling the brake, such as a PTC thermistor for monitoring the brake temperature, are available on request

### *Dynamic application of the brake*

Due to dynamic application of the brake, the permissible energy is limited by the maximum frequency of brake application and the maximum slipping time of the friction disk for one brake application.

- <sup>1)</sup> Due to the limited maximum braking velocity, 2-pole motors are not suitable for S1 duty.
- <sup>2)</sup> Due to the limited maximum braking velocity, 2-pole motors are not possible.
- <sup>3)</sup> The brake is mounted at the drive-end. The motor with brake can be mounted with a B5 or B14 flange, depending on the motor.  
Flange B5 (14th position of the Article No. **F**) mounting of types of construction IM B5, IM V1, IM B35, IM V15;  
Flange B14 (14th position of the Article No. **K**) mounting of types of construction IM B14, IM V18, IM B34).  
It is not possible to mount IM V3 and IM V35.
- <sup>4)</sup> The bearing lifetime of the brake is the same as the bearing lifetime of the motor.

- <sup>5)</sup> The dynamic braking torque is lower because the rated braking torque depends on the speed. (The technical specifications must be stated for the dynamic braking torque.)
- <sup>6)</sup> For a voltage of 230 V AC, a bridge rectifier is used, which is contained in the scope of supply.
- <sup>7)</sup> For a voltage of 400 V AC, a half-wave rectifier is used, which is contained in the scope of supply.
- <sup>8)</sup> Time until the braking torque is reached after the voltage supply is switched off.
- <sup>9)</sup> Time until the braking torque has decayed after the voltage supply is switched on.

### VIK version

VIK = Verband der Industriellen Energie- und Kraftwirtschaft e.V.  
(German Association of the Energy and Power Supply Industry)

- **VIK standard version –**  
1LE1, 1LE5 + order code **C02**  
"VIK" identification on rating plate.  
→ Product range in Catalog Section 2.
- **VIK-Ex ec version for line operation –**  
1MB1.3, 1MB5 + order code **C02**  
"VIK" and "Ex ec IIC T3 Gc" marking on the rating plate according to Directive 2014/34/EU (ATEX).  
→ Product range in this Catalog Section.
- **VIK Ex ec version for converter operation –**  
1MB1.3, 1MB5 + order code **C02+B40/B41+...**  
"VIK" and "Ex ec IIC T3 Gc" markings on the rating plate and motor operating data for converter operation on the additional rating plate according to Directive 2014/34/EU (ATEX).

VIK standard version and VIK Ex ec versions include technology for Zone 2 with type of protection Ex ec IIC T3 Gc. Motors up to frame size 355 can be supplied in accordance with the technical requirements of the VIK recommendation.

Minimum efficiency class:

For VIK standard, VIK Ex ec and VIK-Ex db version, the minimum efficiency class IE3 for line operation and IE2 for converter operation must be complied with according to EC Directive 640/2009 EC. For the VIK Ex eb version, the minimum efficiency class is IE2.

Note:

8-pole motors or all motors < 0.75 kW are still possible as these motors are outside the power range specified for IE stamping.

**Ex certification EAC for the Eurasian Customs Union (Russia, Belarus, and Kazakhstan, Armenia, Kyrgyzstan)**  
**EAC = Eurasian Conformity**

For the import and commissioning of explosion-protected motors in the Eurasian Customs Union, approval is required from a named Russian testing authority.

"Ex certificate EAC for the Eurasian Customs Union"  
Order code **D35**

When motors are ordered with order code **D35**, they are fitted with an additional rating plate displaying the logo "EAC Ex" and the Russian Ex marking.

Example: Additional rating plate

The "EAC Ex" logo can also be found on the package label. The motor must have an "EAC Ex certificate", although the certificate does not generally have to be shipped with the motor. The customs authorities use the motor article number to check the motor certification.

A copy of the EAC Ex certificate must be in the customer's possession before the motor is commissioned.

The certificates are available from the SIOS (Siemens Industry Online Support) portal

<https://support.industry.siemens.com/cs/ww/en/>

as well as the "Drive Technology Configurator" (DT Configurator)  
[www.siemens.com/dt-configurator](http://www.siemens.com/dt-configurator)

### Coolant temperature

Coolant temperature -40 to +40 °C for explosion-protected motor

For all SIMOTICS XP 1MB<sub>5</sub> motors of frame sizes 71 to 450, the operating temperature can optionally be extended up to -40 °C. Extensive technical measures are necessary in this case.

Order code **D03**

Order code **D03** is not possible in combination with order code **H02** "Vibration-proof version".

<sup>1)</sup> The slipping time  $t_3$  is the friction time until the motor stops ( $\leq 0.8$  s); slipping time  $> 0.8$  s on request.

<sup>2)</sup> Maximum frequency of braking (duty cycles) per hour ( $> 0.8$  s on request).

**SIMOTICS XP 1MB1, 1MB5 explosion-protected motors**

Orientation

Article number code

**Selection and ordering data**

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

**1MB1511-1DB22-2AB4-Z****R10**

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and power and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

Forced-air cooled (IC416)			1MB55 ■ 4-... ■■■■■	-Z F90+...+...+
For options and information, see from page 5/96				

1) Terminal box 1XB1631.

2) Terminal box position NDE can only be ordered using order code **H09** (2 x terminal box TB3R61). Order code **H08** not available.3) The standard version is 50 Hz 690 VΔ (voltage code **4-7**) or 60 Hz 575 VΔ (voltage code **4-0**).4) In the series version, the maximum speed is n<sub>max</sub> = 3000 rpm. Converter operation at higher speeds on request for an additional charge.

5) Utilization with sinusoidal supply in accordance with thermal class 155 (temperature class F).

- 1) Terminal box 1XB1631.
- 2) Terminal box position NDE can only be ordered using order code **H09** (2 x terminal box TB3R61). Order code **H08** not available.
- 3) The standard version is 50 Hz 690 VΔ (voltage code **4-7**) or 60 Hz 575 VΔ (voltage code **4-0**).
- 4) In the series version, the maximum speed is  $n_{\max} = 3000$  rpm. Converter operation at higher speeds on request for an additional charge.
- 5) Utilization with sinusoidal supply in accordance with thermal class 155 (temperature class F).

## **Cast-iron series 1MB58.3 – self-ventilated or forced-air cooled – Premium insulation system**

<sup>1)</sup> Noise values for line operation under load, tolerance + 3dB(A).  
<sup>2)</sup> These sound power levels are above the set values in the VIK recommendation in the "standard" version. This difference must be agreed between the manufacturer and the operator.

<sup>3)</sup> Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate.
