# We Are **Certified System Integrator** for Global Lighting Brands

- Almost 30 years that **Lighting Today** has been nothing but one of the best partners that Philips ever has. Today, we are **Certified System Integrator (CSI)** by Signify Commercial Thailand for Philips Professional Lighting, Color Kinetics, Philips Dynalite and Interact.

As a qualified CSI, **Lighting Today** is able to not only distribute **Philips BEST lighting products** but also integrate **lighting control systems** and provide **full quality services** for Connected lights (wire), IoT lights (wireless) and Architectural lights (facade) throughout residential, hospitality, industry and office & building applications.

- In addition, **Lighting Today** is a **Professional Distributor (Prof. DIS)** for Philips BETTER lighting products to those users whose energy efficiency is primary concerned.

## Preliminary Services

- **Consultancy**
- Site evaluation and plan for system design

# **interact** Hospitality helps you improve your Hotel business

Enhance guest  
experience

Improve staff  
efficiency

Optimize energy  
consumption

## A Warm Welcome

When guests arrive, Interact Hospitality automatically detects their presence and activates a tailored welcome lighting scene as soon as they open the door. No fumbling with key cards or switches, just a perfect presentation of your room.

This welcome scene can be automatically tailored based on the time (day/night) or ambient light and can include other services such as motorized curtains for maximum impact

## Mood & Activity Scenes

With one tap on a panel, mood or activity based scenes are the most intuitive way for guests to personalize their rooms through dynamic lighting.

Either with dimming or switching individual or groups of fittings, scenes such as bright, relax and work are easy for guests to choose from, tailoring the lighting to a different intensity or focus.

Lighting scenes can be even richer with the addition of tunable white or accents of color - for example a warmer light in relax mode.

### Welcome Scene

Switches on automatically to impress guests upon arrival and optimize energy savings

### Reading

Dimmed light setting, creating an ideal scene for reading

### Relax

Another dimmed scenario to create the perfect atmosphere to relax

### Truly Representative Temperatures

**Multi Point Readings** – Each of our guest panels has an integrated temperature sensor, accurate to .25°, giving us an average multiple reading from various locations around the guest room.

Using the average temperature from these sources, means that for the first time, HVAC control is based on a truly representative picture of the full room, not just at the thermostat.

**Localized Overnight** – At night, when the room is occupied and in 'All Off', we move the source of temperature reading to use data from the bedside panels, representing how the room is being used.

By using this localized data, we provide maximum comfort, contributing towards a great nights sleep.

### AntiStumble: Next GEN Night Lights

Research shows that a third of travelers leave a light in overnight to help them navigate in an unfamiliar environment. As well as consuming energy, that's a major distraction from great sleep.

AntiStumble pairs sensors and embedded lighting, to detect when a guest steps out of bed. Once detected, we illuminate the surface of the floor with a low level of light.

Combined with the logic from our occupancy sensors, light is held on during a guests journey and time in the bathroom, then simply fading back to darkness within a few seconds of returning to bed.

## Wakeup Lighting

Some of the most exciting research today concerns the effect of light on our circadian (daily) cycles and sleep patterns.

Based on scientific findings, we have developed 'Wake Up', world first 'human centric' lighting that smart controls, to deliver rich guest experiences.

**A Sunrise to Wake You Naturally** - At the guests chosen time, a sunrise sequence is played inside the guest room, using the Philips unique lighting recipe.

Over the time and steps of the sequence, the guest is naturally awoken feeling refreshed and ready for the day ahead.

Optionally this can be combined with sound and the opening of curtains to end the sequence.

**Relaxing Light in the Evening** - Wakeup is ideally paired with relax scenes to help guests get ready for sleep. Lower light levels with no glare help our bodies unwind.

## Zero Light Pollution

Illuminated indicators on panels, sensors and other devices around a room can also become distracting for many guests getting to or staying asleep. That why for every component in our system, we provide the option to disable all indicators - either fully or as part of specific scenes such as night or 'All Off'.

Using our Antumbra panels combines this total darkness with an easy an intuitive way to find a light when needed - just wave your hand in front of any panel and the halo

will provide a soft illumination or display back-light to help.

## Automated Conditioning

**Real-time Occupancy** - Our smart occupancy detection, as well as to check in/out information from a linked PMS, provides the most efficient conditioning of a room, while always reflecting a guests comfort preference.

**Guest Preferences** - Whilst we optimize the room conditions when unoccupied to balance comfort and energy savings, we always remember and restore guest preferences.

**Balcony Link** - When a balcony door or window is opened, HVAC can be disabled immediately or after a delay. Real-time door status is shown on our dashboard for staff and the thermostat for guests.

## Real-time Insights for Housekeeping

Housekeeping staff can apply for a quick overview of all rooms to know what needs to be done. Whether it's making up room, picking up laundry or collecting a tray after room service, the Interact Hospitality dashboard will help your housekeeping team prioritize tasks and work as efficiently as possible.

The guest detection system can show if a room is occupied and available for housekeeping.

Control every function of the room from the same user interface, with matching wiring accessories for a consistent design & finish

## Curtains & Blinds

Motorised curtains, blinds and privacy screens provide guest conveniences, as well as a 'wow effect' when incorporated in to welcome scenes upon a guests entry.

Philips supports standard directional motor and Somfy control types.

## Ceiling Fans

Colonial properties, Resorts and Villas may choose to offer ceiling fans as an additional guest option.

Control of these can be seamlessly integrated fusing the same controllers and interfaces for consistent presentation of control.

## BMS & Central HVAC

To integrate guest room mechanical systems such as HVAC and power with building management systems, we provide a range of open protocol and proprietary integration options such as Bacnet, Modbus and Coolmaster .

## Power Outlet Control

Whilst a room is checked out, you can control power outlets to conserve energy savings by reducing standby power consumption from televisions, coffee makers and more.

Outlets are then automatically powered up upon check-in.

## Matching Wiring Accessories

Matching the polycarbonate and brushed aluminium range of Antumbra panels, we can provide a comprehensive range of power, data and audio visual outlets.

Designed to accompany the system, they provide a complete guest facing interfaces in the same range of standard and bespoke colors.

When you add technology to a room, there's nothing more important than providing an intuitive, beautiful interface

## Beautiful Materials, Infinite Personalisation

Our button and display panels are available in polycarbonate, glass, and anodized brushed aluminium to provide you with highest quality feel and finish. Available in wide range of beautiful colors to match interior design schemes as well as be spoke for larger projects.

All panels have completely customizable engraving and on-screen graphics.

**Tactile Feedback** - The range combines smart functionality, with the familiar and reassuring tactile 'click' on buttons.

**Infinite Personalisation** - Chose from 1, 2, 4 or 6 buttons, with a display or a glass touch panel, then personalize to match the brand.

**Languages** - Display panels can provide guests with a choice, or can be automatically set where preference are passed by PMS.

## Philips Antumbra - Smart, Intuitive, Updatable

To allow them to react as a guest approaches, each panel has a proximity sensor hidden behind the buttons.

Combined with our halo backlit and button LED indicators, panels automatically 'wake up' as a guest approaches, presenting current statuses.

After a short interval the panel fades back to darkness, removing any remaining light that could disturb sleep.

If you want to change something over time, the networked panels allows updates, such as new on-screen graphics or button functionality.

## Ready for Use, Everywhere

As a low voltage IP22 device, Antumbra panels can be locate in any in-room location safely.

So now you can locate bathroom lighting, blinds and volume controls inside the bathroom for maximum guest convenience.

## Retail & Hospitality - R&H

## Office & Industry - O&I

## Boardrooms and Meeting Facilities

Blinds and audio-visual (AV) systems can be integrated for seamless operation at the press of a single button - for example when a 'Presentation' scene is selected.

The system also supports 'room join', which allows multiple rooms separated by moveable partitions to be automatically linked and controlled from one central point.

The lighting control system can coordinate multiple lighting groups to work together ensuring seamless changes between scenes in harmony with how the space is being used.

## Open Office

Multifunction sensors automatically adjust lighting near the window independently from the lighting near the core of the building to balance incoming daylight, as well as dimming or turning off lights in unoccupied areas.

After-hours, sensors detect where people are working within a building and provide lighting for the area, as well as illuminating a pathway to the exit.

## Single Office

Presence detection enables lights to be switched off or dimmed when an area has been unoccupied for a certain length of time. In areas where there are external windows, the office can incorporate Dynalite's daylight harvesting strategies to balance artificial lightings levels with natural incoming light - saving energy and optimizing the workplace ambience.

# Intelligent Office Solutions

## Lobbies and Reception

Lighting plays a pivotal role in creating the initial impression for any visitor entering a reception area. The Dynalite system can adjust lighting throughout the day to ensure a visitor's first impression is always positive.

By including a timeclock and light level sensors, the control system reduces energy consumption while still maintaining the overall professional lighting effect.

## Amenities

The Dynalite network timeclock adjusts the state of the system according to the time of day, sunrise/sunset times, date or season.

These general adjustments are automatically overridden if an area is unoccupied in order to avoid unnecessary energy expenditure. Sensors ensure that lighting is only provided when and where required.

## Kitchen and Utility Areas

A Dynalite system can effectively save energy in back-of-house areas that are not in use. To optimize user comfort, different lighting levels are implemented for kitchen and utility areas reflecting changes in occupancy and usage.

# Intelligent Office Solutions

## Corridors

Corridor lighting schedules can provide a 'corridor-hold' function outside normal working hours to maintain an illuminated pathway to the exit for all people working late, to assure their safety, comfort and convenience.

Once the last occupants have left the building, occupancy sensors drive the system to 'unoccupied mode' without users needing to remember to turn lights off.

## Car Park

It is important that occupants in a car park feel safe and secure. The Dyalite system optimizes lighting for enhanced safety, while mitigating energy costs with automated dimming/switching.

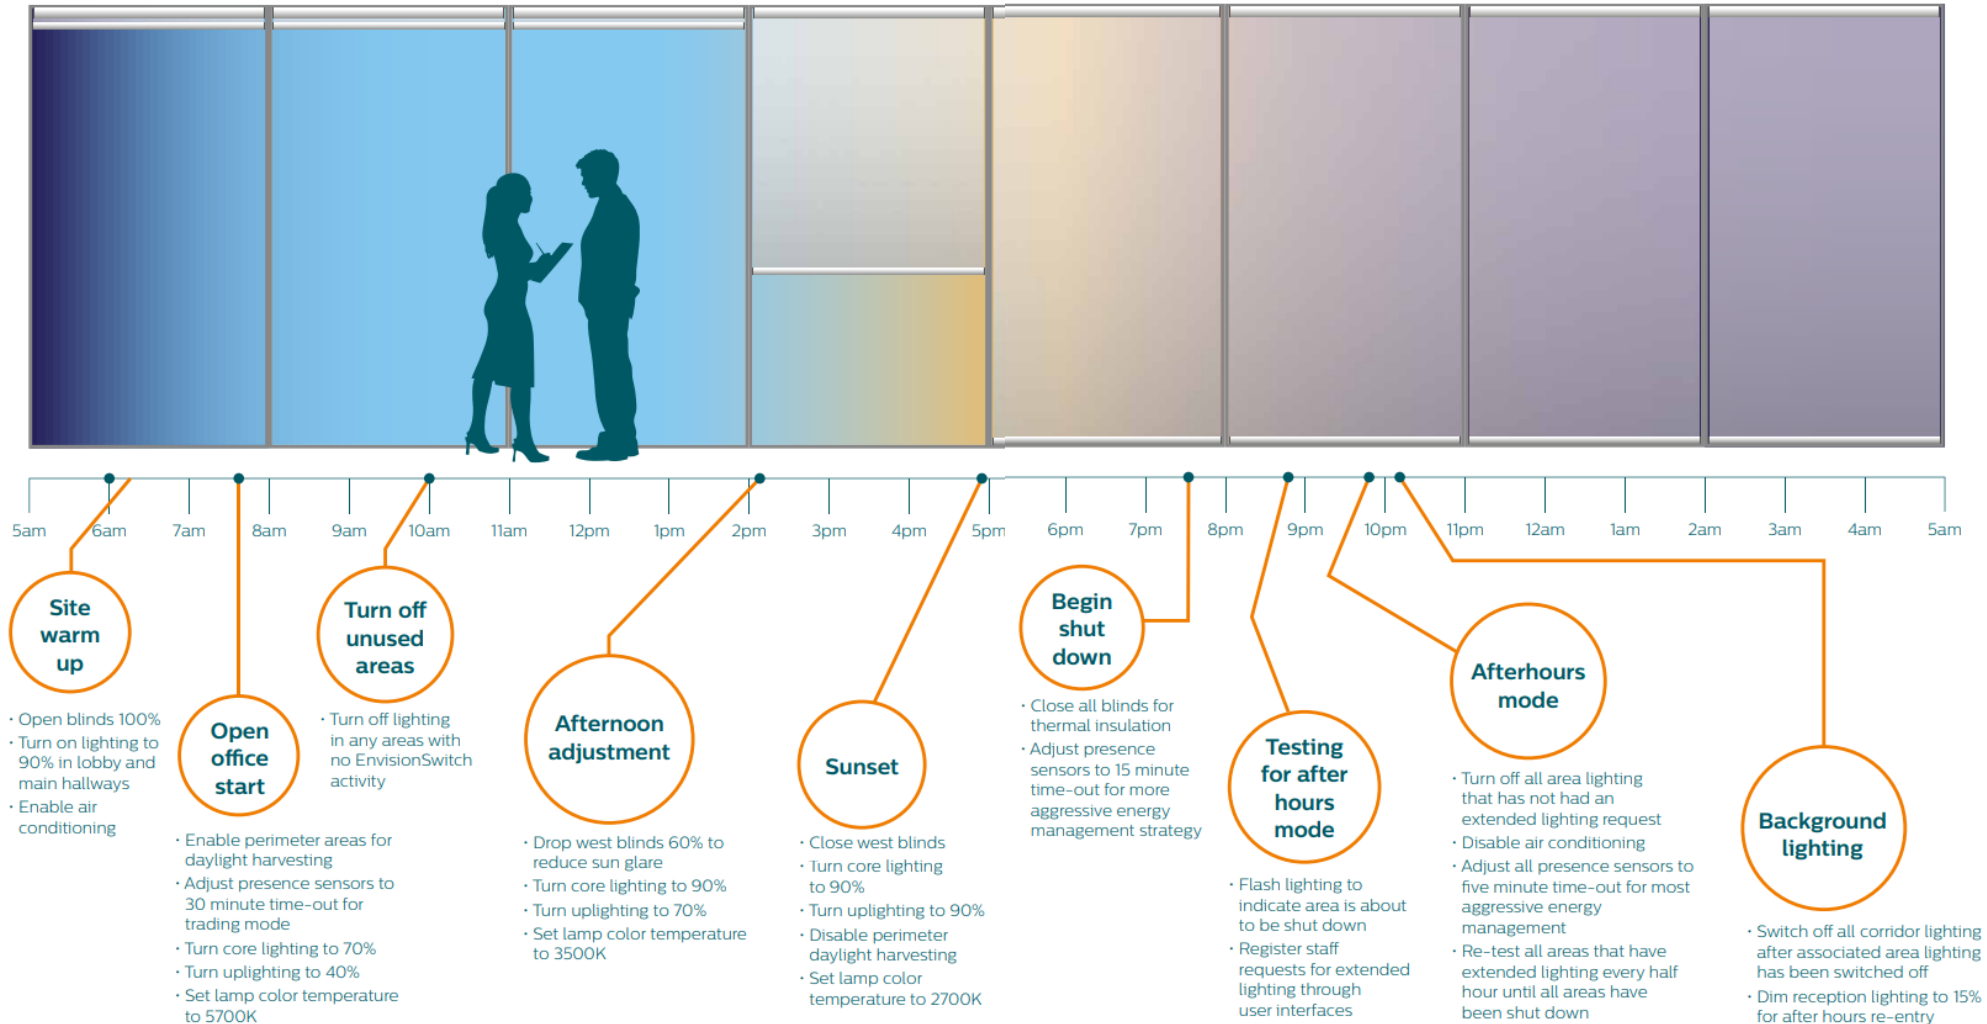

## Facade

The Dyalite control system can easily create dynamic and memorable lighting effects, complementing a building's facade while creating a positive and lasting impression of the company brand.

# A Daily Cycle of Office Lighting

// An automated event-based strategy maximizes energy efficiency and occupant comfort throughout the daily cycle."

# Create Multi-system Solutions

## 1 Occupancy Detection

A range of passive infrared and ultrasonic sensors ensure that user occupancy can be monitored for all areas, with lighting programmed to switch off or dim when an area has been unoccupied for a predetermined length of time. After hours, sensors ensure that occupied areas – along with an egress pathway – continue to be illuminated when required by any remaining occupants.

## 3 HVAC

Integration with the HVAC system ensures that heating/cooling is only provided for occupied areas, thereby saving unnecessary energy expenditure. Manual overrides ensure unoccupied rooms can be set up in advance to ensure the perfect environment is created when people arrive.

## 5 User Interfaces

While much of the Dyalite lighting control system is automated, a range of stylish user interfaces can be added to a system to provide local control of lighting, AV, blinds, HVAC and other integrated systems.

## 2 AV

AV systems can also be integrated with lighting and blinds to allow single-button room set-up for presentations with a dedicated 'Presentation' scene. All services within the meeting/boardroom can be recalled from a single button press when entering the room and automatically shut down at the end of a meeting, when no occupants are detected after a set period of time.

## 4 Lighting / Scene Setting

Lighting levels can be optimized to suit individual tasks and to reflect different possible uses of a space. Moreover, sensor control facilitates automated occupancy based scenes as well as different daylight harvesting strategies.

## 6 Blinds

Blinds can be integrated with lighting and heating, ventilation and air conditioning (HVAC) systems to support daylight harvesting strategies and manage the thermal efficiency of the building.

## Philips Antumbra Series

## Philips Dynalite Revolution

## Philips Dynalite Touch Screen

### Philips AntumbraButton

Each easy-to-press mechanical button of the **PABP European** can be customized with text or icons and programmed to perform a wide variety of local and site-wide control functions.

### Philips AntumbraDisplay

The **PADP European** provides a central LCD display to present multiple pages of functions and system information.

### Philips AntumbraTouch

The **PATP European** has a smooth glass finish and uses capacitive touch technology to detect a person's presence.

The **PDRP European's** sleek, contemporary exterior can be tailored to suit any environment, with multiple button configurations, color choices, custom engraved labeling, and RGB backlights.

Designed as an integral part of the Dynalite system, the **PDTS** offers intelligent control and direct access to scheduling, scene editing, diagnostics and local environmental sensing.

Combining Ethernet connectivity, a powerful onboard processor, and contemporary design cues from the Antumbra user interface range, the **PDTS** is a sleek, functional complement to any project.

# Antumbra Series

lighting  
today

The stunning Antumbra range has a surprising number of features, packaged in a choice of three designs that redefine the concept of minimalist chic. When you first encounter Antumbra, it detects your body's own electrical field and wakes up with a striking wall-wash lighting effect. With its array of inbuilt features, the Antumbra range offers an unparalleled balance of form and function.

The innovative use of **field effect technology** allows the keypad to automatically detect your presence by your body's own electrical field.

A **wall-wash lighting effect** is triggered when approached, to welcome interaction. The built-in light sensor detects ambient light levels and ensures the wall-wash effect activates at a comfortable brightness level.

Each keypad contains an **integrated temperature sensor**, allowing temperature monitoring at different locations throughout a building and obviating the need for third-party BMS or HVAC sensors and controls.

Designed in two halves, the communication and application modules enable the keypad **to be installed in two stages**, without the need for further programming when the fascia is installed.

Labeling for the Antumbra keypads is available in a **choice of Arabic, Chinese, English, Hebrew, Japanese and Korean** with font size options. An additional library of icons has been created to give a visual representation of button functions that transcends language barriers.

All indicators and sensors are completely hidden, giving a **smooth streamlined finish**.

A selection of rim and fascia finish options is available for each Antumbra keypad. These can be mixed and matched to suit.

The AntumbraTouch range has a smooth glass finish and uses capacitive touch technology to detect finger pressure with no moving parts. Descriptive text and icon labeling describes functionality and is available in a range of languages.

## Dynalite Design Studio

The Dynalite Design Studio is a streamlined, intuitive design tool that helps you to customize the right user interface for your project, both functionally and aesthetically. Build your perfect interface with no need to memorize complex part numbers or ordering codes. Follow the Design Studio's easy steps to select from the full variety of panel types, orientations, fascia/rim finishes, and button labeling options. When you are satisfied with your choices, you can download a PDF of your final design for easy inclusion in your purchase order.

## Frame finishes

Black

White

Revolution has appealing proportions, with large, tactile buttons that provide generous space for labeling. Each button's tactile mechanical response and RGB backlight provide clear confirmation that the system has received the user's instruction. This results in an approachable UI that can be easily operated by a range of audiences regardless of age, ability, or language.

Revolution leads the way in modular UI design. Its sleek, contemporary exterior can be tailored to suit any environment, with multiple button configurations, color choices, custom engraved labeling, and RGB backlights.

Internal environmental sensors and seamless connectivity elevate Revolution beyond lighting control, enabling it to communicate local conditions to the Dynalite network and provide valuable opportunities for HVAC integration.

**Field effect technology** detects the presence of an approaching user and lights up the keypad to encourage interaction.

**RGB backlit buttons** can be independently configured from an endless color palette, responding dynamically to a button press or system event.

The backlights fade when Revolution is not in use, enabling the panel to blend into its environment, reducing light pollution, and conserving energy.

**Integrated temperature and humidity\* sensors** contribute location-specific environmental data to the system, eliminating the need for third-party BMS or HVAC sensors and controls.

Modular architecture allows the communication module to be precommissioned offsite and installed separately, before the frame and button options are finalized.

Engraved labeling is available in a **choice of Arabic, Chinese, English, Hebrew, Japanese and Korean** with font and size options, as well as an extensive icon library that transcends language barriers.

All indicators and sensors are completely hidden, giving a **sleek, minimalist aesthetic**.

The **glass-look polycarbonate finish** combines style and durability. It is scratch and fingerprint resistant, and can withstand the use of hospital-grade cleaning agents.

# Color Touchscreen

The Philips Dynalite Color Touchscreen (PDTS) adds a new dimension of control. The PDTS supports a range of sensing features that provide end-users with the ultimate in system interaction. The screen interface can be customized to control all automation elements from one location.

## Fascia finish

Black Borosilicate  
Glass

Fascia color matches  
AntumbraTouch

## Touchscreen features:

- Intuitive controls
- Built-in time clock
- Temperature and humidity sensor
- Proximity sensor with halo response

lighting  
today

## Philips Dynalite apps

The Philips Dynalite control app has a simple streamlined interface that delivers intuitive automated control into the hands of the end-user.

DynamicTouch offers a completely tailored solution for customers who want a unique and finely tuned bespoke user interface for their office or home.

EnvisionTouch comfortably exceeds most clients' smart home control requirements and runs on both Android and iOS.

**Other software user interface options.** For small to medium businesses, the Philips Dynalite Ethernet Gateway provides a customizable browser based interface.

For larger enterprises, Philips Dynalite System Manager provides multi-user site-wide access.

## Control app

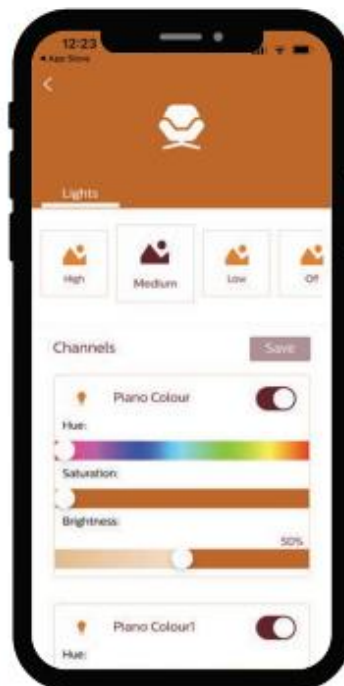

The Philips Dynalite control app is available for iOS. It provides portable control of the Philips Dynalite system in both residential and commercial applications. Wrapped in a modern and intuitive user interface, this app allows users to manage scenes, control individual channels and apply schedules.

**Plug-and-play** - Connect the app to the Philips Dynalite system and it's ready to use.

**Scene management** - Recall and edit pre-defined lighting scenes and control individual lighting channels.

**Scene scheduling** - Trigger lighting scenes based on a schedule.

**Simple connection** - Connect to the PDEG - Philips Dynalite Ethernet Gateway, through your local Wi-Fi network.

iPhone with Philips Dynalite Control  
- an intuitive automated control app

## DynamicTouch

Available for iOS devices only. Fully customizable app for home or commercial control.

iPhone with DynamicTouch  
- a totally customizable app

## EnvisionTouch

Available in two versions: iOS and Android. Self-configuring application with standardized templates and functionality to speed up and simplify commissioning & installation processes.

iPhone with EnvisionTouch  
- a self configuring app

The **presence detector switch** is designed with pyroelectricity infrared induction and optical sensing control technology. In dim light conditions, this product has the automatic control effect of "lighting up when people come over and turning off with a time delay when people go away", which causes the load lamps to light up and automatically turn off with a time delay.

Corridor

The **voice and light control switch** is designed with voice induction and optical sensing control technology. In dim light conditions, this product has the automatic control effect of "lighting up when senses the voice, turning off with a time delay when senses no voice", which makes the load lamps light up and automatically turn off with a time delay. If someone makes a voice after lighting up the load lamp, it will be triggered again and restart calculation of the time delay.

Underground

The **touch time delay switch** has the automatic control effect of "lighting up when people touch the button and turning off with a time delay", which makes the load lamp turn on and automatically turn off with a time delay. If someone touches the switch after lighting up the load lamp, it will restart calculation of the time delay.

Cellar

This **presence detector and floor wash light** is designed with pyroelectricity infrared induction and optical sensing technology. In darkness, it will automatically light on when sense human. When people come, it continues light on; when people go, it will light off with a delay.

How does Simon Smart work?

Smart scene switch

Simon BLE using **Bluetooth Mesh communication** architecture, with many-to-many and decentralized mesh communication mechanism, **each node is connected with each other**, which can effectively avoid single point of failure

## Features

### Switch Control

Independent control of each light

### Dimming & Tunable WH

Support to adjust light brightness and color temperature

### Smart Scene

Light can be controlled independently or be in a group

### Constant Illumination Control

Detect sunlight intensity and dynamically adjust indoor lighting

### Timing Control

The selected scene can be executed after a certain period of time

### Independent Control

Independent lighting control of each area

### Curtain Control

Smart curtain control can be realized via Simon BLE

### Infrared Dynamic Monitoring

Real-time monitoring person motion and adjust lighting scenes correspondingly

**TRILUX**  
SIMPLIFY YOUR LIGHT.

After Wilhelm Lenz founded the “manufacture for luminaire components” in Menden, Germany, **TRILUX** has been knowing as the potential and diversity of light for 111 years.

Today **TRILUX Simplify Your Light** represents the most simple and reliable path to customized, energy-efficient and sustainable lighting solutions.

## SUSTAINABLE

### Particularly simple maintenance access.

Maintenance work in cleanrooms is particularly time consuming and cost intensive due to the elevated hygiene requirements. Fidesca G3 LED is prepared for this twice over. Firstly, with a long service life of 90,000 h (L80), and secondly, with easy maintenance access. If maintenance is required, the luminaire's light engine can be replaced. No luminaire replacement, no interventions in the building structure.

90,000 h

## MAINTENANCE IN RECORD TIME

**Bye-bye effort:** for easy maintenance and repair, the luminaire head can be opened without tools and with just one hand via a practical locking lever. Replacing the electrical block also does not require any tools.

Simple and reliable

TWENTY TWO

## INDIVIDUAL LIGHTING CONCEPTS

In addition to the large number of luminaire inserts, other components such as sensors, emergency lighting, spotlights or loudspeakers can be simply inserted via plug and play. This makes it easy to implement individual lighting concepts.

Customized

## SMART MODULE WITH SENSOR

On request, Tugra is available with an intelligent end cap with sensor technology, e.g. for detecting persons. The sensor technology controls either the single luminaire or individually connected luminaire groups, and can also implement smart applications such as running light in parking garages and logistics applications. Subsequent conversion is quick and easy via the end cap.
