## Technical specifications

Table 1 Technical specifications

Input voltage	5 VDC $\pm$ 0.25V
Power	500 mW (Operating); 950 mW (Max.)
Current	100 mA (Operating); 190 mA (Max.)
Standby current	<250 $\mu$ A
Laser	650nm laser diode
Laser safety	EN60825-1, Class 1
Decoding rate	100 times/sec
Scanning angle	$\pm 60^\circ$ , $\pm 65^\circ$ , $\pm 42^\circ$ (Skew, Pitch, Roll)
Min. element width	1.25mm (5mil) for Long-Range series; 0.08mm (3mil) for High-Density series
Decode capability	UPC-A, UPC-E, EAN-13, EAN-8, ISBN/ISSN, Code 39, Code 39 full ASCII, Code 32, Interleaved 2 of 5, Industrial 2 of 5, Matrix 2 of 5, Codabar(NW7), Code 128, Code 93, Code 11(USD-8), MSI/Plessey, UK/Plessey, UCC/EAN 128, China Post, GS1 DataBar (formerly RSS) variants (Optional)
Indicator	Beeper, LED
Interface supported	Keyboard wedge, RS-232, USB
Operating mode	Hand-held, Auto-detection (Optional)
Dimensions	Height $\times$ Width $\times$ Depth: 9.5cm $\times$ 6.7cm $\times$ 15.4cm
Weight	148g, without cable
Cable	Straight 2.0m
Connector type	RJ-45 phone jack connector
Case material	ABS + PC
Temperature	0° to 45°C (32° to 113°F), (Operating & Storage)
Humidity	5% to 85% (non-condensing)
Durability	1.5m (5 ft) drops to concrete
Programming method	Manual (reading special barcode)
Program upgrade	Online

## Parts of the scanner

Figure 1

- ① Exit window
- ② LED
- ③ Trigger
- ④ Cable interface port
- ⑤ Release-hole of the cable

Figure 2

Remove the interface cable:

1. Find the release-hole.
2. Insert a thin wire into the hole and pull out the cable gently.

# Introduction to installation

Note: If any of the below operation is incorrect, turn off the power immediately and check the scanner for any improper connections. Go through all steps again.

## Installation - keyboard wedge

1. Switch off the host and unplug the keyboard connector.
2. Attach the modular connector of the Y-cable to the cable interface port on the scanner.
3. Connect the round male DIN host connector of the Y-cable to the keyboard port on the host device.
4. Connect the round female DIN keyboard connector of the Y-cable to the keyboard.
5. Ensure that all connections are secure.
6. Switch on the host system.

Figure 3

## Installation - RS-232

1. Connect the RS-232 interface cable to the bottom of the scanner.
2. Connect the other end of the interface cable to the serial port on the host. Tighten the two screws to secure the connector to the port.
3. If the host does not have power supply (on PIN 9), connect the external power supply (DC adapter) to the RS-232 cable.

Figure 4

## Installation - USB

The scanner attaches directly to a USB host, and is powered by it. No additional power supply is required.

1. Refer to Figure 4, connect the USB interface cable to the bottom of the scanner.
2. Plug the series A connector in the USB host, or an available port of the terminal.
3. Windows will automatically detect the USB device.

## Scanning modes

The scanner has two scanning modes: hand-held and auto-detection. When the scanner is scanning, ensure the scan line crosses every bar and space of the symbol.

The auto-detection scanning mode has two operating modes: in-stand and always ON. The following is an introduction to in-stand auto-detection mode.

1. When the scanner is seated in the stand, the scanner operates in auto-detection mode (see Figure 6). When scanner is removed from the stand, it operates in its normal hand-held mode.
2. To scan a bar code, present the bar code and ensure the scan line crosses every bar and space of the symbol.
3. Upon successful decode, the scanner beeps and the LED lights.
4. When the laser light is off, the present bar code must be removed to active next scanning.

Figure 6

## Programming instruction

Refer to the next page, the steps of programming are:

1. Scan the **SETUP** bar code on the parameter setting part.
2. Enter the option mode by scanning the **Option bar code**.
3. To the right of the option barcode, the necessary alphanumeric inputs are listed. Scan these alphanumeric entries.
4. Scan the **END** bar code, listed on the lower right hand corner of each parameter setting part.
5. **Notes that only one parameter can be setup at each time.**
6. During the process of programming, LED is lighting to indicate the programming correctness. LED will go off if any incorrect programming operation performed.
7. After each successful programming, LED will go off and the scanner will beep twice.
8. Throughout the programming bar code menus, **the factory default settings are indicated with asterisks (\*)**.

**Example:** to set **Flow control** to be XON/XOFF.

**Steps:** Scan the following barcodes in order.

SETUP bar code

Option bar code	Option	Alpha. entry
Flow control 0301	None RTS/CTS (Host: Low RTS) RTS/CTS (Host: High RTS) XON/XOFF ACK/NAK	00* 01  02  03  04
Inter-character delay 0302	00-99 (ms)	00-99 00*
Block trans. delay 0303	00-99 (10 ms)	00-99 00*
Response delay 0304	00-99 (100 ms)	00-99 00*

Figure 7

## Interface selection

This scanner supports interfaces such as keyboard wedge, RS-232 serial wedge, and USB interface. In most of the cases, simply selecting an appropriate cable provided by the manufacturer will work for a specific interface.

### Interface selection:

**Auto detection**-By setting this function, the scanner will automatically detect the keyboard wedge, RS-232 or USB interface for user.

 **%SETUP**    SETUP

Option bar code	Option	Alpha. entry
Interface selection  <b>0101</b>	Auto detection (Keyboard wedge /RS-232/USB)	00*
	Keyboard wedge	01
	RS-232	02
	USB	03

 **%%%END**    END

## Keyboard wedge

**Keyboard type:** As a keyboard interface, the scanner supports most of the popular PCs and IBM terminals.

**Keyboard layout:** The scanner supports different national keyboard layouts.

**Clock period:** According to the PS2 protocol, the clock is provided by the device, e.g. keyboard or scanner, with the period between 60us to 100us.

**Delay-after-compound-key:** In some rare occasions, machine with low speed PS2 communication port would require a free time gap following the press/release of the compound key (Shift, Ctrl or Alt).

**Numeric key:**

**Alphabetic key-** the scanner will output code result as alphabetic key.

**Numeric key-** the scanner will output code result as pressing numeric keypad ( '0', '1', '2', '3', '4', '5', '6', '7', '8', '9', '.', '+', '-', '/', '\*' only).

**Alt+ keypad-** the scanner will output code result as pressing Alt+ numeric key (on keypad). Note that the Num Lock control key must be ON. This setting can be specially adapted for use with different national keyboard layout.

**Power-on simulation:** All of the PCs check the keyboard status during power-on self test. It simulates keyboard timing and passes keyboard present status to the PC during power-on.

**Inter-character delay:** This delay is inserted after each data character transmitted.

**Inter-byte delay:** This delay is inserted after each byte transmitted. Normally a character is comprised of three or above bytes.

**Block trans. delay:** It is a delay timer between barcode data output. This feature is used to transfer continually with shorter barcode data.

**Caps Lock status:** By selecting *Caps Lock "ON"* or *Caps Lock "OFF"*, the scanner will output data string based on the information on the Caps Lock status.

**Caps Lock override:** If this function is enabled, on AT or AT notebook hosts, the keyboard ignores the state of the Caps Lock key. Therefore, an 'A' in the bar code is sent as an 'A' no matter what the state of the keyboard's Caps Lock key.

 %SETUP SETUP

 %%%END END

## RS-232 interface

### Flow control:

**None**-The communication only uses TxD and RxD signals without any hardware or software handshaking protocol.

**RTS/CTS**-If the scanner wants to send the barcode data to host computer, it will issue the RTS signal first, wait for the CTS signal from the host computer, and then perform the normal data communication. If there is no replied CTS signal from the host computer after the timeout duration, the scanner will issue an error indication. By setting (Host idle: Low RTS) or (Host idle: High RTS), the scanner can be set to match the Serial Host RTS line.

**XON/XOFF**-An XOFF character turns the scanner transmission off until the scanner receives an XON character.

**ACK/NAK**-After transmitting data, the scanner expects either an ACK (acknowledge) or NAK (not acknowledge) response from the host. When a NAK is received, the scanner transmits the same data again and waits for either an ACK or NAK. After three unsuccessful attempts to send data when NAKs are received, the scanner issues an error indication and discards the data.

**Inter-character delay:** Refer to Inter-character delay of Keyboard wedge.

**Response delay:** This delay is used for serial communication of the scanner when it waits for a handshaking acknowledgment from the host.

 %SETUP SETUP

Option bar code	Option	Alpha. entry

 %%%END END

## Hand-held scan & some global settings

### Scanning mode:

**Good-read off-**The trigger button must be pressed once to activate scanning. The light source of scanner stops scanning when there is a successful reading or no code is decoded after the **Stand-by duration** elapsed.

**Momentary-**The trigger button acts as a switch. Press button to activate scanning and release button to stop scanning. The light source of scanner stops scanning when there is a successful reading or no code is decoded after the **Stand-by duration** elapsed.

**Alternate-**The trigger button acts as a toggle switch. Press button to activate or stop scanning.

**Continue-**The scanner always keeps scanning, and it does not matter when the trigger button is pressed or duration is elapsed.

**Timeout off-**The trigger button must be pressed once to activate scanning. The light source of scanner stops scanning when no code is successful decoded after the **Stand-by duration** elapsed.

**Same barcode delay time:** If a barcode has been scanned and output once successfully, the laser beam must be off or moved away from the barcode beyond delay time to active scanning the same barcode. When this feature is set to be "0xFF", then the delay time is indefinite.

**Double confirm:** If it is enabled, the scanner will require a several times of same-decoded-data to confirm a valid reading.

**Global Max./Min. code length:** These two lengths are defined as the valid range of decoded barcode data length. Make sure that the minimum length setting is no greater than the maximum length setting, or otherwise the labels of the symbology will not be readable. In particular, the same value can be set for both minimum and maximum reading length to force the fixed length barcode decoded.

### Notes:

1. Please set the max./min. length for individual barcode in later sections, if special demand is requested.
2. The number of check digits is included in max./min. code length.
3. These two settings have no effect on the symbologies with fixed-length, e.g. UPC-A, UPC-E, EAN-13, EAN-8 and China Post.

**Global G1-G6 string selection:** The scanner offer one or two string group for ALL symbologies. By setting one or two digits to indicate which string group you want to apply. You may refer to the chapters of "String setting" and "String position & Number of truncated leading/ending character".

Example: Group 1 → set 01 or 10. Group 2 and 4 → set 24 or 42.

All valid settings include 00, 01, 02, 03, 04, 05, 06, 10, 11, 12, 13, 14, 15, 16, 20, 21, 22, 23, 24, 25, 26, 30, 31, 32, 33, 34, 35, 36, 40, 41, 42, 43, 44, 45, 46, 50, 51, 52, 53, 54, 55, 56, 60, 61, 62, 63, 64, 65 and 66.

**Element amendment:** If it is enabled, the scanner can read the barcode comprised with bars and spaces in different scale.

**Printable character only:** If it is enabled, the scanner will output the printable characters only, i.e. in ASCII from 20H to 7EH.

**Decoder optimization:** If it is enabled, the scanner will optimize the decoder with error correction. This function is not effective for all types of barcodes.

 %SETUP SETUP

Option bar code	Option	Alpha. entry

 %%%END END

## Indication

**Power on alert:** After power-on the scanner will generate an alert signal to indicate a successful self-test.

**LED indication:** After each successful reading, the LED above the scanner will light up to indicate a good barcode reading.

**Beeper indication:** After each successful reading, the scanner will beep to indicate a good barcode reading, and its beep tone duration is adjustable.

**Beep tone duration:** This parameter can be adjusted for a good reading upon favorite usage.

|||||  
%SETUP SETUP

Option bar code	Option	Alpha. entry

## Code 39

### Read:

#### Format

★	Data digits (variable)	Check digit (optional)	★
---	------------------------	------------------------	---

**Check digit verification:** The check digit is optional and made as the sum module 43 of the numerical value of the data digits.

**Check digit transmission:** By setting Enable, check digit will be transmitted.

**Max./Min. code length:** Each symbology has own max./min. code length. If both setting of max./min. code length are "00"s, the setting of global max./min. code length is effective. The length is defined as to the actual barcode data length to be sent. Label with length exceeds these limits will be rejected. Make sure that the minimum length setting is no greater than the maximum length setting, or otherwise all the labels of the symbology will not be readable. In particular, you can see the same value for both minimum and maximum reading length to force the fixed length barcode decoded.

**Code ID setting:** Refer to [Code ID setting](#) of UPC-A.

**Insertion group selection:** Refer to [Insertion group selection](#) of UPC-A.

**Start/End transmission:** The start and end characters of Code 39 are "★"s. You can transmit all data digits including two "★"s.

**"★" as data character:** By setting Enable, "★" can be recognized as data character.

**Convert Code 39 to Code 32:** Code 32 is a variant of Code 39 used by the Italian pharmaceutical industry. Note that Code 39 must be enabled in order for this parameter to function.

#### Format of Code 32

"A" (optional)	Data digits (8 digits)	Check digit
----------------	------------------------	-------------

**Code 32 Prefix "A" transmission:** By setting Enable, the prefix character "A" can be added to all Code 32 barcodes.

**Laser Light Direction Setting:** By scanning the barcode above, the decoding direction of the scanner's laser light is from left to right. By scanning the up-side-down barcode above, the decoding direction of the scanner's laser light is from right to left.

## G1-G6 & FN1 substitution string setting

### Format of barcode data transmission

Prefix	Code name	Preamble	Code ID	Code length	Code data	Code ID	Postamble	Suffix
--------	-----------	----------	---------	-------------	-----------	---------	-----------	--------

**Suffix string setting:** The <enter> key is represented in different ASCII when it is applied by different OS. For a Windows/DOS OS, <enter> is represented as <CR><LF> (0x0D 0x0A); for an APPLE MAC OS, <enter> is represented as <CR> (0x0D); for a Linux/Unix OS, <enter> is represented as <LF> (0x0A).

### Prefix/Suffix string setting: & Preamble/Postamble string setting:

They are appended to the data automatically when a barcode is decoded.

Example: Add a symbol of “\$” as a prefix for all symbologies.

Steps:

- 1) Scan **SETUP** and **Prefix string setting** barcode.
- 2) Use the ASCII table to find the value of \$→24.
- 3) Scan **2** and **4** from the barcode on the foldout back page.
- 4) Scan **END** barcode.

Scanning steps: Scan the following barcodes in order.

**Insert G1/G2/G3/G4 string setting:** The scanner offers 4 positions and 4 character strings to insert among the symbol.

Example: Set G1 string to be “AB”.

Original code data	“1 2 3 4 5 6”
Output code data	“1 2 A B 3 4 5 6”

Steps:

- 1) Scan **SETUP** and **Insert G1 string setting** barcode.
- 2) Use the ASCII table to find the value of A→41, B→42.
- 3) Scan **4**, **1** and **4**, **2** from the barcode on the foldout back page.
- 4) Scan **END** barcode.
- 5) Refer to the chapter of G1-G4 string position & Code ID position.
- 6) Refer to the chapter of Hand-held scan & some global settings.

Testing barcode:

**FN1 substitution string setting:** The FN1 character (0x1D) in an UCC/EAN128 barcode, or a Code 128 barcode, or a GS1 DataBar barcode can be substituted with a defined string.

**Truncate leading G5 string setting:** By setting, a defined leading character or string can be truncated. Also a single character can be un-defined.

**Repeat of a G5 character setting:** While G5 is set as a single defined/un-defined character, G5 can also be set to be repeated. This setting is ignored when the truncate number is more than the barcode data characters. The option of “FF” for this setting is not active while the option of **Truncate leading G5 string setting** is “00”.

Example: Truncate all leading zeros for all symbologies.

Original code data	“0001 2 3 4 5 6”
Output code data	“1 2 3 4 5 6”

Steps:

Testing barcode:

**Truncate ending G6 string setting:** By setting, a defined ending character or string can be truncated. Also a single character can be un-defined.

**Repeat of a G6 character setting:** While G5 is set as a single defined/un-defined character, G6 can also be set to be repeated. This setting is ignored when the truncate number is more than the barcode data characters. The option of “FF” for this setting is not active while the option of **Truncate ending G6 string setting** is “00”.

 %SETUP SETUP

Option bar code	Option	Alpha. entry
Prefix string setting  8001	0-22 characters None	00-FF <sub>16</sub> 00*
Suffix string setting  8002	0-22 characters <ENTER>	00-FF <sub>16</sub> 0A0D*
Preamble string setting  8003	0-22 characters None	00-FF <sub>16</sub> 00*
Postamble string setting  8004	0-22 characters None	00-FF <sub>16</sub> 00*
Insert G1 string setting  8005	0-22 characters None	00-FF <sub>16</sub> 00*
Insert G2 string setting  8006	0-22 characters None	00-FF <sub>16</sub> 00*
Insert G3 string setting  8007	0-22 characters None	00-FF <sub>16</sub> 00*
Insert G4 string setting  8008	0-22 characters None	00-FF <sub>16</sub> 00*
FN1 substitution string setting  8009	0-4 characters <SP>	00-FF <sub>16</sub> 20*
Truncate leading G5 string setting  8010	A un-defined character 1-22 defined characters <0>	00 01-7F <sub>16</sub> 30*
Repeat of a G5 character setting  8011	Once Defined times Un-defined times (All)	01* 01-22 FF
Truncate ending G6 string setting  8012	A un-defined character 1-22 defined characters <0>	00 01-7F <sub>16</sub> 30*
Repeat of a G6 character setting  8013	Once Defined times Un-defined times (All)	01* 01-22 FF

 %%%END END

## G1-G4 string position & Code ID position

### Format of barcode data transmission

Prefix	Code name	Preamble	Code ID	Code length	Code data	Code ID	Postamble	Suffix
--------	-----------	----------	---------	-------------	-----------	---------	-----------	--------

**Insert G1/G2/G3/G4 string position:** The scanner offers 4 positions to insert strings among the symbol. In case of the insertion position is greater than the length of the symbol, the insertion of string is not effective.

**Code ID position:** It is allowed to select different positions of code ID placement.

Option bar code	Option	Alpha. entry
Insert G1 string position  8101	00-99	00-99 00*
Insert G2 string position  8102	00-99	00-99 00*
Insert G3 string position  8103	00-99	00-99 00*
Insert G4 string position  8104	00-99	00-99 00*
Code ID position  8105	Before code data After code data	00* 01
Reserved  8106		
Reserved  8107		

## String transmission

*Note: The information in this chapter is closely related to the chapter of String setting.*

### Format of barcode data transmission

Prefix	Code name	Preamble	Code ID	Code length	Code data	Code ID	Postamble	Suffix
--------	-----------	----------	---------	-------------	-----------	---------	-----------	--------

**Preamble transmission:** By setting Enable, preamble will be appended before the data transmitted.

**Postamble transmission:** By setting Enable, postamble will be appended after the data is transmitted.

**Code ID transmission:** Code ID can be transmitted in the format of either Proprietary ID or AIM ID. Refer to the chapter of Default setting for each barcode.

**Code length transmission:** The length of code data string can be transmitted before the code data when Enable is selected. The length is represented by a number with two digits.

**Code name transmission:** By setting Enable, code name will be transmitted before code data.

**Case conversion:** The characters within code data or the whole output string can be set in either upper case or lower case.

**FN1 substitution transmission:** The scanner supports a FN1 substitution feature for keyboard wedge, USB and RS-232 interface. The replacement string of FN1 can be chosen by user (see chapter of G1-G6 & FN1 substitution string setting).

## Troubleshooting

Problem	Possible causes	Possible solutions
Nothing happens when you follow the operating instructions, or the scanner displays erratic behavior.	No power to the scanner.	Check the system power. Ensure the power supply is connected.
	Incorrect cables.	Use the original cables.
	Connections are loose.	Check for loose cable connections.
Laser comes on, but the scanner does not decode.	Bar code symbol is unreadable.	Check the symbol to make sure it is not defaced. Try scanning test symbols of the same bar code type.
	Scanner is not programmed for the correct bar code type.	Be sure the scanner is programmed to read the type of bar code you are scanning.
	Distance between scanner and bar code is incorrect.	Move the scanner closer to or further from the bar code.
Scanned data is incorrectly displayed on the host.	Scanner is not programmed to work with the host. Check scanner host type parameters or editing options.	<p>Be sure proper host is selected.</p> <p>For RS-232, ensure the scanner's communication parameters match the host's settings.</p> <p>For a USB-HID keyboard or a keyboard wedge configuration, ensure the system is programmed for the correct keyboard type and language, and the CAPS LOCK key is in the correct state.</p>
Other circumstances.		Contact your distributor or the manufactory support centre.

## **Maintenance**

Cleaning the exit window is the only maintenance required. A dirty window may affect scanning accuracy.

1. Do not allow any abrasive material to touch the window.
2. Remove any dirt particles with a damp cloth.
3. Wipe the window using a tissue moistened with water.
4. Do not spray water or other cleaning liquids directly into the window.
5. Use a soft, dry cloth when cleaning the scanner.

## Assembling the stand

1. See the figure above, tighten the screws.
2. Bend the neck to the desired position for scanning.
3. Screw mounting: Screw one #10 wood screw into each screw-mount-hole until the base of the stand is secured.
4. Tape mounting: ①Peel the paper liner off one side of each piece of tape and place the sticky surface over each of the three rectangular tape holders. ②Peel the paper liner off the exposed sides of each piece of tape and press the stand on a flat surface until it is secure.

## ASCII Table

L H	for keyboard wedge		for RS-232	
	0	1	0	1
0	Null		NUL	DLE
1	Up	F1	SOH	DC1
2	Down	F2	STX	DC2
3	Left	F3	ETX	DC3
4	Right	F4	EOT	DC4
5	PgUp	F5	ENQ	NAK
6	PgDn	F6	ACK	SYN
7		F7	BEL	ETB
8	Bs	F8	BS	CAN
9	Tab	F9	HT	EM
A		F10	LF	SUB
B	Home	Esc	VT	ESC
C	End	F11	FF	FS
D	Enter	F12	CR	GS
E	Insert	Ctrl+	SO	RS
F	Delete	Alt+	SI	US

Notes: The 2nd and the 3rd columns above are used for keyboard wedge only.

L H	2	3	4	5	6	7
0	SP	0	@	P	`	p
1	!	1	A	Q	a	q
2	“	2	B	R	b	r
3	#	3	C	S	c	s
4	\$	4	D	T	d	t
5	%	5	E	U	e	u
6	&	6	F	V	f	v
7	‘	7	G	W	g	w
8	(	8	H	X	h	x
9	)	9	I	Y	i	y
A	*	:	J	Z	j	z
B	+	;	K	[	k	{
C	,	<	L	\	l	
D	-	=	M	]	m	}
E	.	>	N	^	n	~
F	/	?	O	_	o	DEL

Example: ASCII “A” = “41”.

## Return default parameters & others

**%%%DEF**

### **WARNING: Default value initialization**

If you wish to return the scanner to all the factory default settings, scan the barcode above.

**%%%VER**

### **Firmware version list**

If you wish to display the firmware version, scan the barcode above.

Configuration alphanumeric entry barcode
