After-sales service

New products recommendation

Fixed way for scan and check

Mobile picking goods

Fixed sorting in courier and logistics

Warehouse

Free hands to decrease working intensity.

Goods picking and inventory in warehouse of Logistics, Courier and E-commerce makes AUTOID®Pad scan and check goods and at the same time pick goods with a trolley and mounting bracket. This frees hands to improve working efficiency.

Cashier In Retail

Mobile cashier makes transaction any time and any place.

Mobile cashier solution with fixed and mobile two using ways occupies a small place, achieves non-cash payment, and finishes transaction any time and any place. This can solve the problems of occupying too much space, not being moved easily and only cashier desk for payment in traditional way.

Mobile cashier in Retail

Semi-automatic scanning way in important working processes

Applied in automatic production lines

Manufacturing

Various working ways & high cost-effective scanning

AUTOID®Pad has the fixed data collection way. It has semi-automatic operating in the working process of data collection in manufacturing. Compared with traditional way by PDA and gun scanner, this can free hands and expand applications range. Also it can replace fixed scanner and industrial control equipment in low&medium-speed production line. So this makes high cost-effective AUTOID®Pad.
