

An aerial night view of a city, likely Dubai, with a network of glowing white lines overlaid on the scene. The lines form a grid and connect various points across the city, suggesting a smart infrastructure or data network. The city lights are visible, and a prominent highway with light trails is in the center. In the top right corner, there is a vertical bar with several colored segments: blue, purple, red, orange, yellow, green, and grey.

**BELDEN**

# Belden Smart Building Solutions

---

A Belden smart building can improve and grow your business, enhance security, reduce operating costs, attract and retain employees, and adapt to changes with ease.

Belden offers a comprehensive portfolio for signal transmission, data communication networks and power supply of devices designed for a wide variety of applications.

## Why Choose a Belden Smart Building Solution?

A Belden smart building provides everything an enterprise needs to run smarter, automatically and efficiently. It also adapts to user preferences, creating a more productive work environment. It has technology and infrastructure to support:

### CONVERGENCE

Belden brings previously disparate, unconnected devices to your networks for direct communication and integration — without any human interaction or intervention — to share information, deliver high-quality AV, ensure life safety and improve building management.

### RELIABILITY

Get the reassurance of constant uptime, which allow business processes to continue, keeping revenue and productivity as high as possible. Belden's Smart Building Warranty covers several types of applications to make sure your systems work together for as long as possible.

### EFFICIENT POWERING

Belden brings you the ability to support local powering and Power over Ethernet (PoE), which delivers up to 100W through Ethernet cable to devices. Our systems support higher-power PoE, bringing power and data connections straight to monitors, cameras and other devices.

### PRODUCTIVITY

Belden systems and technology support many applications and technologies simultaneously, allowing people and devices on the network to complete jobs quickly and efficiently, without delays or bottlenecks.

### ANALYTICS

Belden systems support the sensor technology integrated into the many devices connected to your network. This allows you to quickly track and benchmark data - such as traffic patterns, occupancy rates and space utilization - in real time.

### ENVIRONMENTAL SOLUTIONS

Health and workplace well-being improve the environment and occupant satisfaction. Belden's green initiatives allow for buildings that are resource efficient, using less energy and water to reduce greenhouse gas emissions.

## Global Footprint

Belden has a global footprint with operations in North and South America, Europe, the Middle East and Asia Pacific to ensure that our in-house experts are available in an area near you.

Belden's global CICs (Customer Innovation Centers) are run by a multi-disciplinary team of engineers and consultants who combine technology and vertical market expertise to simplify network complexity and accelerate business impact. They work alongside your team to learn about your business and understand your processes to design and configure your Smart Building.

# Making Your Building Smart With Belden

A smart building is seamless in operation, thanks to its connected infrastructure.

Building systems that have stood alone for years using a combination of twisted-pair cabling, AC power and video cable – voice, data, wireless, lighting, HVAC, security, AV, etc. – can now be networked together using one common infrastructure.

All these devices, which use Internet protocol (IP) to send and receive data via the network, converge under one umbrella for cost savings, easier maintenance and better building control.

Because smart buildings are so connected, devices and systems talk directly to each other and make necessary adjustments instead of requiring manual control and

human intervention. The data gathered by these IP-enabled devices is sent back to the network – and to other devices – for evaluation.

Based on what these devices “see”, and experience, adjustments and enhancements are made in real time throughout the day to keep expenses down, reduce energy use, maintain comfort and prevent performance problems.

Smart buildings will challenge enterprise networks, calling for more bandwidth, more flexibility, more speed, more connection points and more reliability. Networks will need to support legacy and new systems, a mix of passive and active equipment, a mix of copper and fiber cabling and ever-increasing numbers of wireless devices

## Audio/Video Communication

1 Digital Signage

2 Cable Television System (CATV)

3 Background Music System (BGM)

## Energy Management

4 Heating, Ventilation and Air Conditioning System (HVAC)

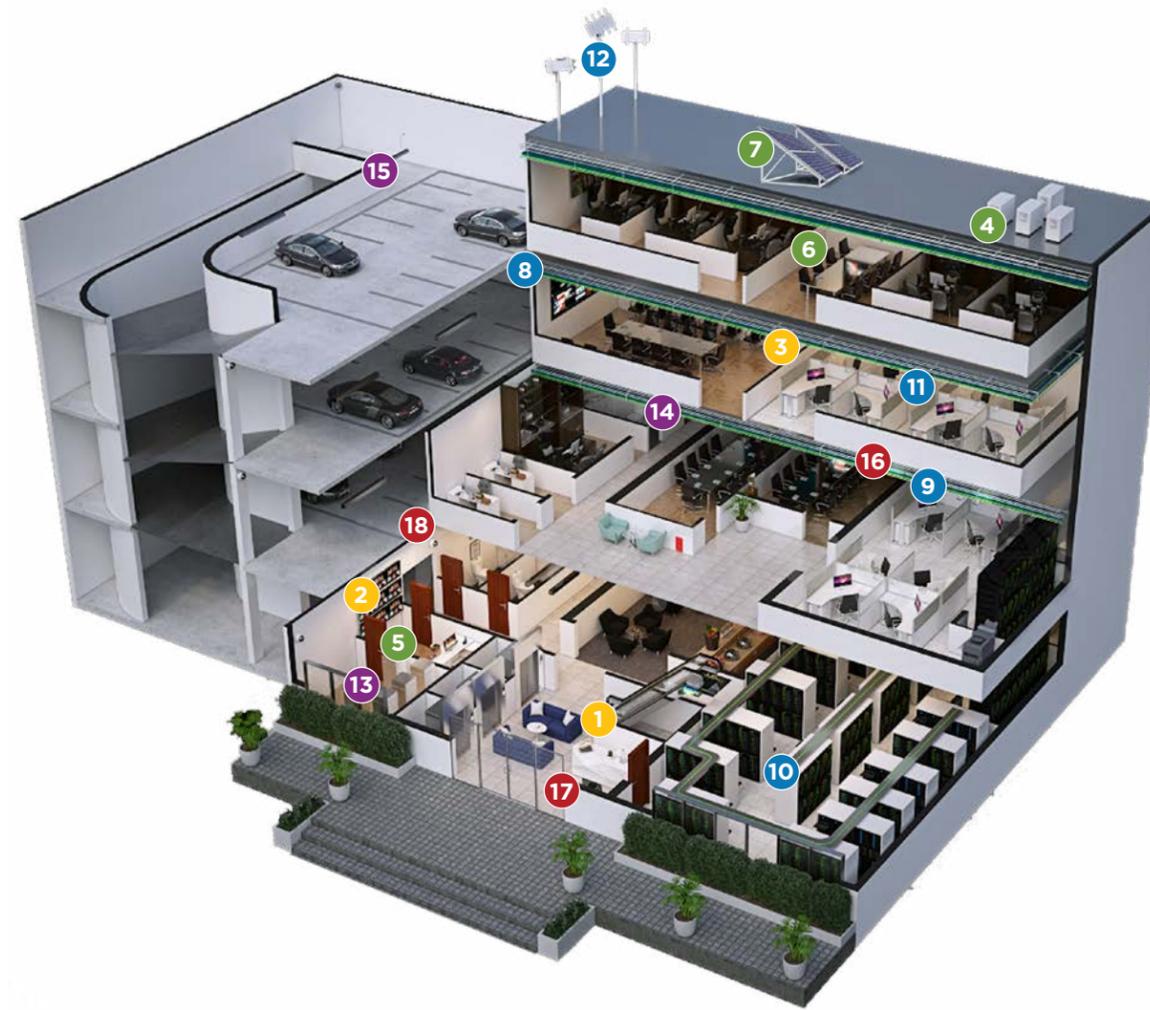

5 Power Management System (PMS)

6 Intelligent Lighting Control

7 Solar Energy System

## Networking Infrastructure

8 IP Telephony & TV

9 Structured Cabling - Fixed & Wireless (LAN)

10 Enterprise Data Center

11 In-Building Wireless

12 Distributed Antenna System (DAS)

## Operation Management

13 Building Management System (BMS)

14 Public Address and General Alarm (PAGA)

15 Car Park Management

## Security/Safety/Surveillance

16 Fire Alarm

17 Access Control

18 CCTV - Indoor & Outdoor

# Belden Has the End-to-End Solution

## Audio/Video Communication

Digital Signage

- Digital Signage is usually in the form of small to large billboards composed of LCDs, LEDs or similar display systems. It is generally connected by a content management system or software that sends the display system the data.
- Belden systems support 100W higher-power PoE devices like digital signage and video walls
- Belden systems support signal extension across large distances for 4K and UHD content

Cable Television System (CATV)

- CATV refers to the system that distributes television signals by means of coaxial and fiber cables. In remote and hilly areas, community antennas are constructed to receive broadcast signals and coaxial cables are used to carry cable television to subscribers.

Background Music System (BGM)

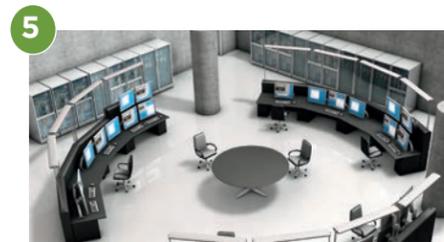

- Background Music System refers to a music playback system that plays continuous background music, normally via a distributed public address audio system in a building.
- Belden offers connectivity support for zoned and building-wide BGM systems
- Belden offers convergence solutions to allow systems to integrate with other devices for communications purposes

## Energy Management

Heating, Ventilation and Air Conditioning System (HVAC)

- HVAC System controls the ambient environment including temperature, humidity, air flow, and air filtering in a building.
- Belden offers cabling infrastructure to connect devices HVAC controls in plenum spaces or raised floors
- Belden can seamlessly integrate sensors, automation and monitoring for total thermal control

Power Management System (PMS)

- Power Management System refers to the building air conditioning and mechanical ventilation, energy and climate management system to monitor and manage energy demand and climate condition in a building.
- Belden offers cabling infrastructure to connect devices PMS monitors
- Belden can seamlessly integrate sensors, automation and monitoring for energy management

Intelligent Lighting Control

- Intelligent Lighting Control System ensures visibility for building occupants, life safety and overall atmosphere in a building.
- Belden offers cabling infrastructure to provide individual fixture management and control in any type of space
- Belden systems support Power over Ethernet to take DC power straight to LEDs anywhere

Solar Energy System

- Solar Energy System is one of the most promising renewable clean energy source, absorb and convert sunlight into electricity. Usually, some other monitoring and tracking systems will be integrated with Solar System to improve the overall efficiency.
- Belden's Type H1Z2Z2-K Solar Cables can be used as the interconnection cable between solar panels and PV inverters.
- For long distance communication, Belden offers fiber optic cables that suitable for outdoor environment and UV resistant.

## Networking Infrastructure

8

IP Telephony & TV

- IP Telephony & TV System refers to the system through which TV services are delivered using the Internet Protocol suite over a packet-switched network such as a LAN or the Internet, instead of being delivered through traditional terrestrial, satellite signal, and cable television formats

9

Structured Cabling - Fixed & Wireless (LAN)

- Local Area Network is the backbone communication infrastructure for information transmission in a building.
- Belden offers infrastructure to support wired and wireless devices, as well as carry high-speed communication and remote power
- Belden systems support high bandwidth and higher power throughput requirements brought forth by BYOD and IoT

10

Enterprise Data Center

- Local Area Network is the backbone communication infrastructure for information transmission in a building.
- Belden offers infrastructure to support wired and wireless devices, as well as carry high-speed communication and remote power
- Belden systems support high bandwidth and higher power throughput requirements brought forth by BYOD and IoT

11

In-Building Wireless

- A data center is a facility that centralizes an organization's shared IT operations and equipment for the purposes of storing, processing, and disseminating data and applications.
- Belden manufactures the widest breadth of copper/fiber 400G/100G/40G products, BAV/control cable and switches for data center, giving you unique end-to-end expertise.
- Belden offer full range of DAC, AOC and Transceivers meets the requirement of data center today and tomorrow.

12

Distributed Antenna System (DAS)

- A Distributed Antenna System (DAS) can be designed for use indoors or outdoors and can be used to provide wireless coverage in hotels, subways, airports, hospitals, businesses. (DAS) is a network of antennas, connected to a common source via Coaxial cable. DAS are distributed throughout a building or an area to improve network performance.
- Belden has whole range of cables available for the DAS solution.

## Operation Management

13

Building Management System (BMS)

- BMS is the computerized measurement, control and management of building services in a facility.
- Belden supports accommodation for devices/sensors/systems that rely on both legacy protocols and newer IP based communications, e.g. IoT.
- PoE-enabling cable & connectivity solutions supporting devices with up to 100W of power for devices.
- REVConnect® for BMS direct field termination which supports up to CAT6A connectivity and 100W PoE

14

Public Address and General Alarm (PAGA)

- PAGA System refers to an electronic sound amplification and distribution system with a microphone, amplifier and loudspeakers, used to allow a person to address to general public in a building for announcement and safety/emergency purposes.
- Belden offers cabling for proper zoning and integration of PA systems with fire and security systems for automated and manual messaging
- Belden offers cabling infrastructure to support centralized system control and management

15

Car Park Management

- Car Parking Management System offers real-time indication of available parking lots in various zones of the car park through signage display. Individual lot sensors with LED lamp indicators further enhance the lot counting and directional guiding services.
- Belden offers cabling infrastructure to support centralized system control and management
- Belden offers cabling for proper zoning and management of parking lots

## Security/Safety/Surveillance

16

Fire Alarm

- Designed to detect unwanted presence of fire by monitoring environmental changes. In the event of an emergency, the system provides a visual alert for the occupants to escape safely.
- Belden offers connectivity that allows fire alarms and mass notification systems to display safety alerts and updates.
- Belden solutions meet different local and international alarm standards for different regions.

17

Access Control

- Selective restriction of access for certain doors and facilities based on system parameters.
- Belden offers reliable and easy-to-install cabling to support bandwidth and power requirements of access control systems for data transfer and management

18

CCTV - Indoor & Outdoor

- Belden offers integration support for CCTV systems to converge with other facility devices in order to automatically identify threats and send alerts.
- PoE solutions that enable cable and connectivity to support devices with up to 100W of power for indoor and outdoor surveillance.
- REVConnect® supports signaling and power solutions for CCTV systems in white, gray and outside spaces

## Planning For Your Smart Building

**AV-over-IP** (Internet Protocol) describes the distribution of audio, video and control signals over the LAN using IP switching and configuration protocols.

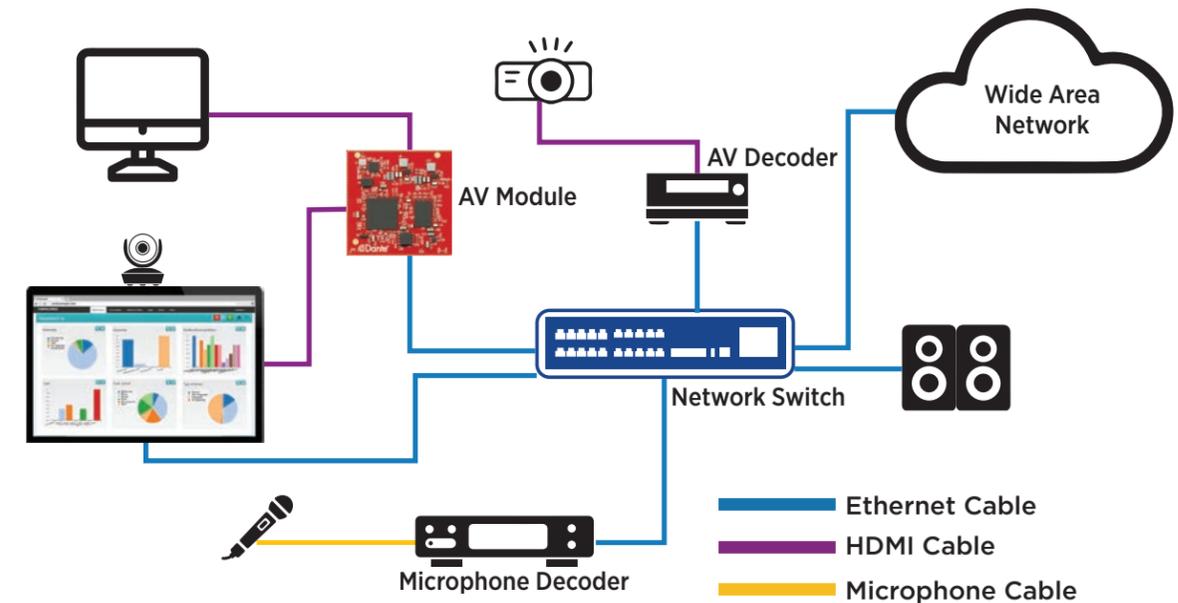

There are two types of networking methods: circuit switching and packet switching.

AV has primarily used circuit switching for AV switching networks – this is how HDBaseT systems work. On the other hand, IT has traditionally used packet switching for data networks.

In a circuit switched network, dedicated point-to-point connections are made to distribute streams of data.

In a packet switched network, data is sliced into small packets and delivered to various destinations that request the data.

The key advantage of Ethernet-based packet switched networks is that they allow many services and users to share the same network infrastructure.

**The Single Pair Ethernet (SPE)** standard can help introduce significant cost savings and easier installation in building automation and management. Everything from access management, fire safety and lighting to HVAC, communications and security rely on some kind of Ethernet-based connectivity, and the related devices need to be powered. SPE allows power and data to be presented together on one single twisted wire pair (Power Over Data Line or PODL). SPE, based on xBASE-T1 protocols, will become a key technology in smart buildings. Thin cables with miniaturized connectors make it possible to significantly increase terminal equipment connection density.

Compared to traditional Ethernet cabling, this approach offers a significantly higher number of connection points. SPE works with 10BASE-T1 to 1000BASE-T1, offers 15-1,000-meter link ranges at Gbit/s transmission rates, and can supply terminal equipment with up to 50 watts.

- Cost savings and easier installation
- Allows power and data to be presented together on one single twisted wire pair
- Significantly increase terminal equipment connection density

Through **IP Convergence**, signals like voice and video can be easily converted into digital data, compressed into IP packets and transported over a single, packet-switched IP network.

More and more applications moving toward IP Convergence direction such as CCTV, AV, Access Control, LED Lighting, so on and so forth. With these next-generation applications, businesses can become even more connected to their stakeholders and drive efficiencies.

IP Convergence leads to easy configuration of single infrastructure, and suit to all application in smart building market.

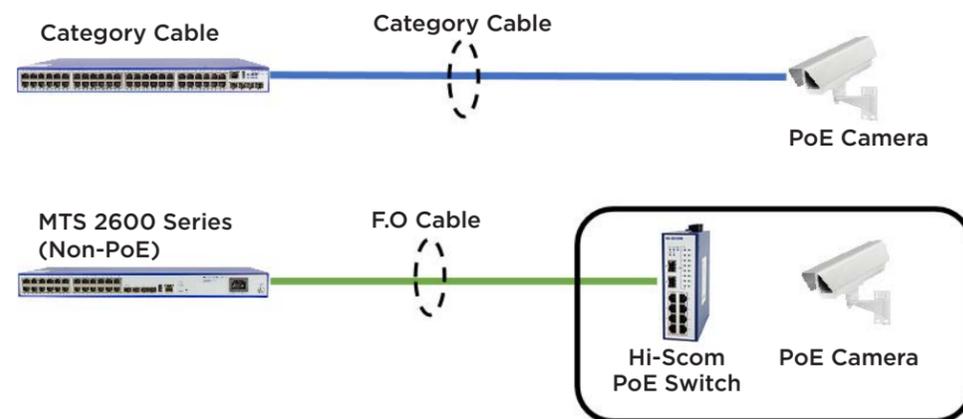

- Cost Reduction: single IP infrastructure reduce complexity.
- Ease of Use: plug and play terminology, easy configurable.
- System Uptime: reliable product to maintain system uptime.
- Highly Scalable: network base accommodate larger devices.

**PoE** plays a key role in delivering both data and power to thousands of smart devices behind smart building implementations. In modern IoT deployment, PoE provides an alternative method of powering devices in those locations may not have power sources available.

The benefits of PoE Technology:

- Power and data can be delivered through one cable
- Quick deployment (without needs of additional power sources)
- Cost saving

## Your Single-Source, End-to-End Infrastructure Solution Provider

### 10GXS Category 6A Cable

#### Key Technology

- Innovative Cable design
- EquiSpline™ ensures structural integrity and maintains distance between pairs
- EquiBlock™ Barrier Technology achieves uniform heat flow dissipation while maintaining insertion loss performance

#### Benefits

- Guaranteed 625 MHz Bandwidth (all benefits of 10GX cable) plus
- Smaller Diameter, Smaller Bend Radius and save space of conduit and tray
- Fewer Twists for easy termination
- Highest Power Rating up to 100W of 4pPoE no length de-rating (100-meter channel)

### FiberExpress Optic Cable

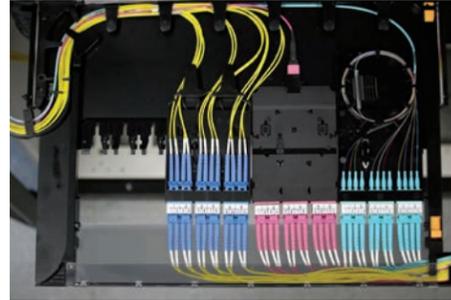

Belden offers indoor and outdoor fiber cable in tight buffer and loose tube designs. Armored, burial, and ruggedized designs are suited to a host of enterprise environments. For each product design, items for OM1, OM2, OM3, OM4, and OS2 (Single mode) items have been developed. Belden offers pre-terminated MPO trunk cables for data center applications and flexible ribbon fiber cables for the Hyperscale data center applications. Most of the Belden fiber products are third-party tested by either ETL or UL and approved for commercial building codes.

## DCX System Optical Distribution Frame

Handle high amounts of fibers cable and add density to fiber frames without compromising on ease-of-use, with the new DCX Optical Distribution Frame, which features innovations like slide-out cassette trays, complete bend radius protection and multiple frame and cabinet configuration options. This solution optimizes and futureproofs the ROI of fiber infrastructure, ensuring the ability to support ever-increasing data center bandwidths, IP migration and new types of technology requiring more fiber connection.

- Scalable - Cable Management to support a potentially unlimited number of fiber connection
- Customizable - Side-by-side, back-to-back and left or right configurations
- High Density - 4608 fibers per frame; up to 55% higher density without compromising ease-of-use
- Modular - Migrate from Base-12 to Base-8/16/24 without changing housings

## Belden REVConnect® Solution

REVConnect® Systems combine high-performance cable with REVConnect® Connectivity components that feature Belden's innovative, game-changing REVConnect® Connectivity. This reduces rework and retesting, is simple for entry-level technicians to learn quickly and makes it simple to adapt to emerging applications and IoT devices.

### Reliable

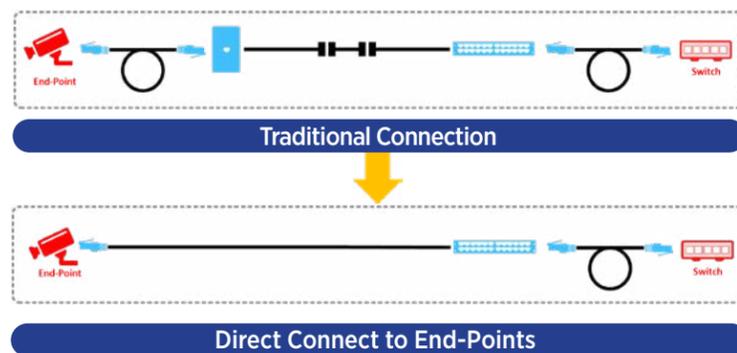

- Connectivity that you can count on to work well the first time
- Compare against other brands which require lengthy rework

### Easy

- As you'll see, an easy, fast termination that is universal for all connectivity styles

### Versatile

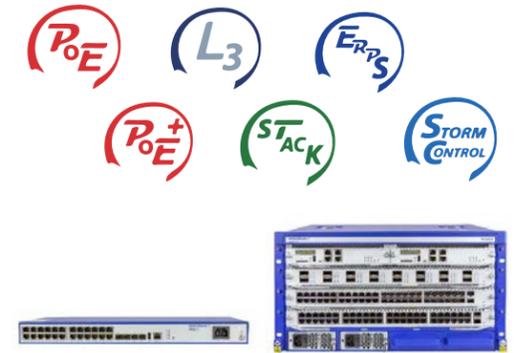

- Featuring the 'core' termination, REVConnect® allows for any 1 of 8 modules to be terminated using the same core termination process and tools
- Switching among these 8 modules occurs in a matter of seconds

## Hirschmann IT MTS Switch

The Hirschmann IT High Performance and Multi-purpose Switches Portfolio Set the Standard for Quality, Reliability and Service.

- Support PoE/PoE+ function (persistent PoE)
- Various interfaces (GE TX, SFP, SFP+ and QSFP)
- Rich L3 feature (RIP, OSPF, ISIS, BGP, as well as IPv6)
- Support up to 8 devices in one stacking
  - \* Persistent PoE Supply - power supplying will not be interrupted during device rebooting.

## Hirschmann IT Dragonfly

Hirschmann IT Dragonfly is next gen indoor and outdoor Wi-Fi 6 access point.

- Support a maximum concurrent data rate of 2.975Gbps
- Support OFDMA, MU-MIMO, BSS Coloring, TWT, WPA3 and all other Wi-Fi 6 features
- RF management ensures the access point stay clear of all radio frequency interference sources
- Support Fine tuned QoS parameters to differentiate and provide appropriate QoS for every application

## Hirschmann IT Raven Next-Generation Firewall

Raven NGFW includes modern functions to complete Hirschmann IT total solution.

- Applications, users and protocols are assessed in forwarding and security policies (typical NGFW features).
- Provides up to 40G QSFP interface to co-work with MTS2948 and MTS8K switch.
- RAVEN NGFW can get latest cyber security events from over 70 traffic flow sampling centers around the world with RAVEN EYE database.
- AV/IPS/APP-ID are available and optional features to make it suffice various application needs.

### Cyber Security Solution

Tripwire Enterprise is an industry leading security configuration management (SCM) suite that provides a full integrated solution for configuration policy, file integrity and remediation management. With compliance polices that support the framework of more than 42 entities, the suite lets IT and OT cybersecurity, compliance and IT/OT operations teams rapidly achieve a foundational level of security throughout their IT and OT infrastructures by reducing the attack surface, increasing system integrity and delivering continuous compliance.

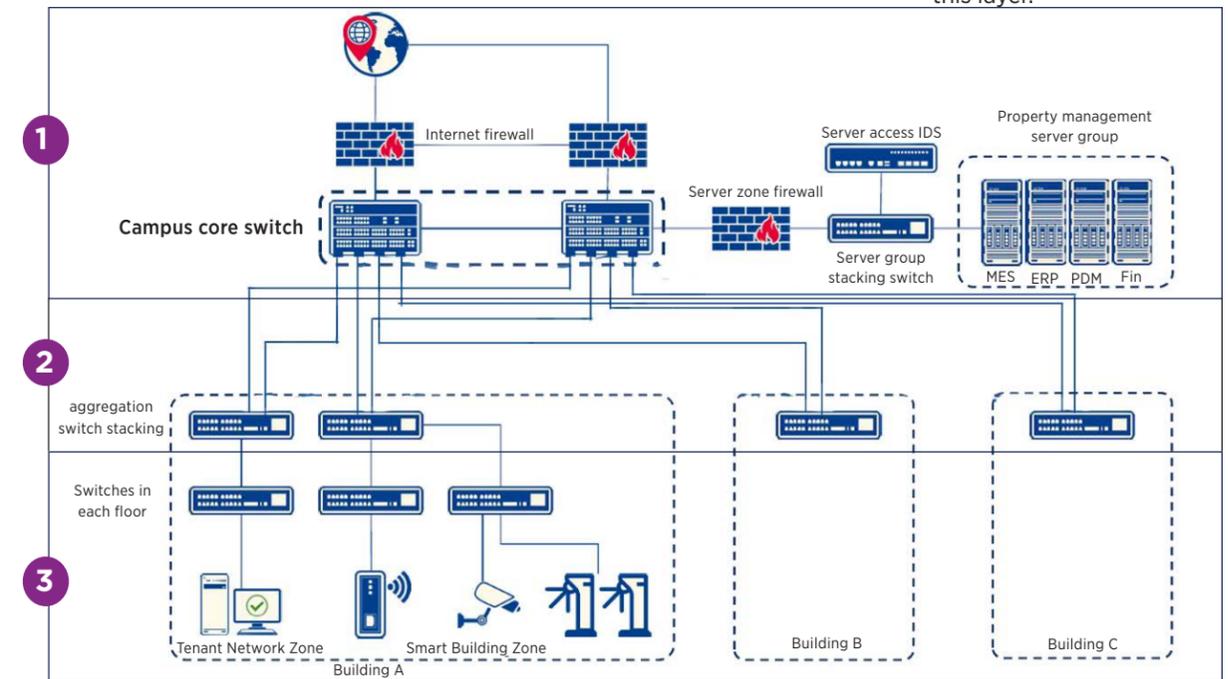

Tripwire Log Center™ collects, analyzes and correlates log data from devices, servers and applications. Why does this matter in an ICS context? ICS create a staggering amount of data, and Tripwire Log Center helps you cut through the noise and focus only on what matters by pre-processing data before filtering it into your security information and event management system (SIEM). This data can be extremely helpful when creating a proactive maintenance strategy—for example it can send an alert if a patch cord is about to fail.

### Typical 3-layer Enterprise Network Reference Architecture

- 1 Access Layer** provide the user access and support PoE/PoE+ application to end devices.
- 2 Distribution/Aggregation Layer** typically segregated by floor/block basis, serve as the bridge between access layer and core layer for network redundancy purpose.
- 3 Core Layer** provide network routing and redundancy, required high bandwidth and high performance L3 switches at this layer.

## Understanding Belden's Smart Building Portfolio

#	Solution	Product Group	Product Family	Audio/Video Communication			Energy Management				Networking Infrastructure					Operation Management			Security/Safety/Surveillance
