

HITACHI MOTOR

HITACHI
Inspire the Next

Hitachi High-Efficiency Motors

With a century of motor development experience, Hitachi provides a new generational motor.

Main Features :

1. Global standard

- Conformity to JIS C 4213(Japan) [Efficiency class: IEC60034-30 Premium efficiency class (IE3)]

2. High-efficiency

- Compare to the standard motors, iron core shape is improved and material quality is raised
- Motor loss is reduced 30~40%
- This improvement realizes higher efficiency when compared with the standard motors

3. Long motor life

- The temperature of stator coil has been decreased at 10~20°C under a rationalization design and a high cooling effect for an electric part
- The coil insulation is achieved two times longer on operation life compared with the standard motor
- The bearings are also 2.5 times longer on operation life
- The operation life changes depending on operation conditions

4. Inverter operation is also available (1:10 or 1:20 constant torque)

- 0.4~1.5kW 4P is available to operate with 1:10(6~60Hz) speed under 100% constant torque operation using the inverters (In case the sensorless vector inverters are used) 1:20(3~60Hz) is also available with special design motors. These motors are adopted durable insulation system with advanced technology.

5. Furthermore benefit

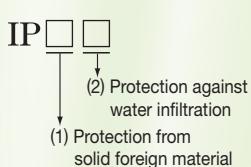

- Low noise and vibration can be realized with advanced technologies

Strengthened compatibility with the global standard

Standard-compatible with protective structure IP 55 and heat-resistant class F

Protective structure IP 55

The conventional "the motor" series employed "IP 44" even for outdoor types. However, "The motor Neo 100" outdoor series employs "IP55" based on the global standard.

Heat-resistant class F

"The motor Neo100" employs heat-resistant class F (the increase in motor temperature is within the range of heat-resistant classes E and B); the reliability of which has been improved.

Description of the protective structure (conforming to JIS C 4034-5)

Model	(1) Degree of protection from solid foreign material	(2) Degree of housing structure protection against water infiltration
Neo100 (IP55)	5 Rotating machine protected against dust	5 Rotating machine protected against fountain flow
Conventional (IP44)	4 Rotating machine protected against solid foreign material in excess of 1 mm	4 Rotating machine protected against splashes

Heat-resistant class	A	E	B	F	H
Limit of temperature rise*	60°C	75°C	80°C	105°C	125°C

* : A temperature which rises by 40°C or more is prescribed when the ambient temperature is supposed to be 40°C.

Circumferences of the spray test (Degree of housing structure protection against water infiltration)

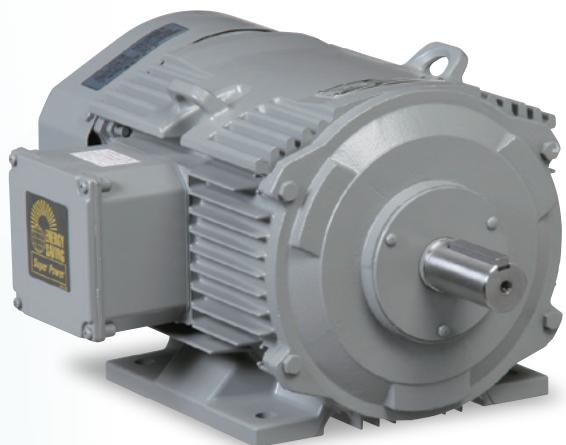

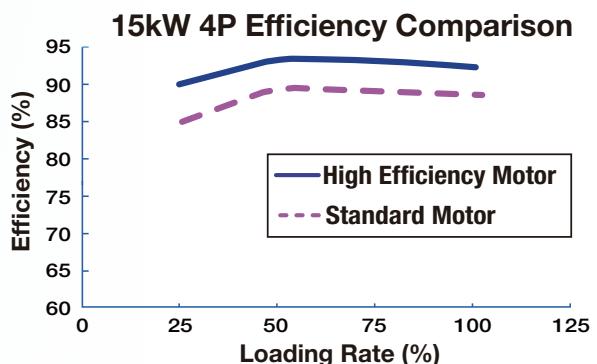

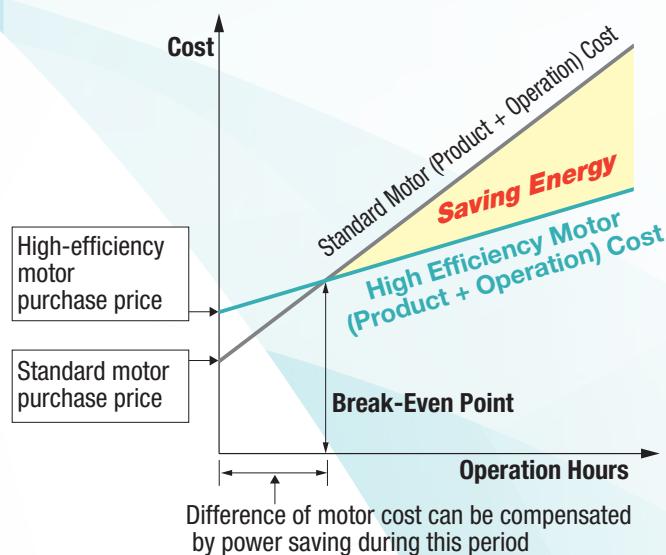

(Reference) IP44 spray test
Rotating machine protected against splashes

IP55 spray test
Rotating machine protected against fountain flow

6. Operational cost saving

- Considering the operational cost under long term period, the best idea is to adopt the high efficiency motors
- The point is just not to consider the initial cost of motor but overall cost including long term operation

- The annual energy savings with high efficiency motor can be estimated by following formula

$$\text{The annual saving fee} = \text{Output (kW)} \times \text{Operation hour (Hour/year)} \times \text{Power charge cost (Cost/kWh)} \times \left(\frac{100}{\text{Standard Motor efficiency} (\%)} - \frac{100}{\text{High efficiency motor efficiency} (\%)} \right)$$

High efficiency motor saves energy consumption in proportion to operating hour.

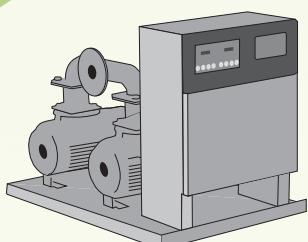

Sample calculation

Motor output : 15kW
 High-efficiency motor efficiency : 93.0%
 Standard motor efficiency : 88.5%
 Annual operation hours : 4,800hours (16h/day)
 Electric power rate : US\$0.15/kWh

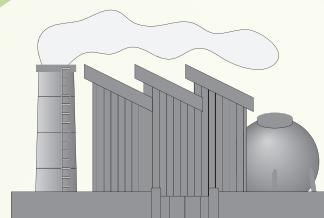

Annual energy saving
Approx. US\$590.49

Application examples

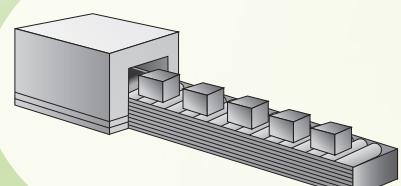

For fans, pumps and compressors.

Factories under long time operation

For process machines for non stop operation

Product specifications

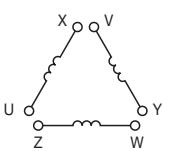

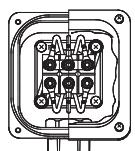

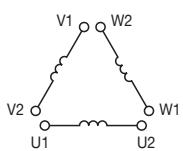

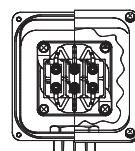

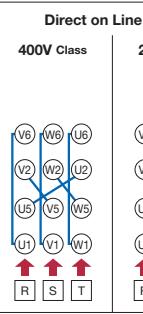

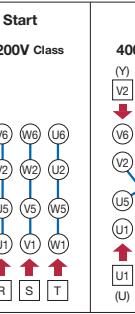

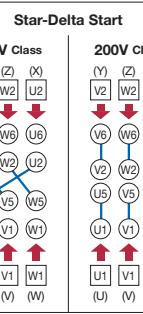

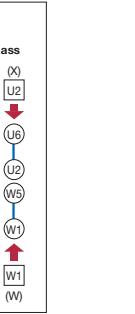

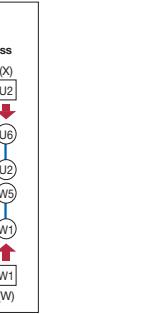

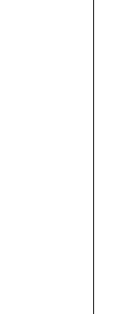

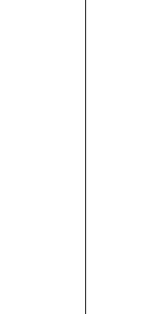

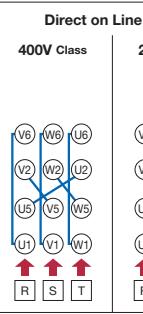

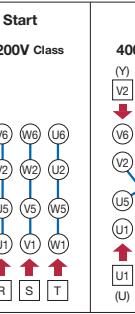

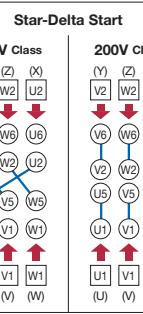

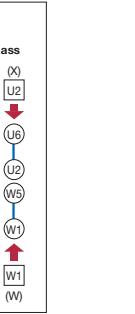

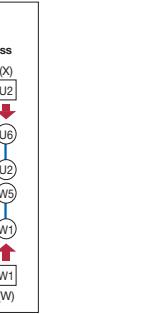

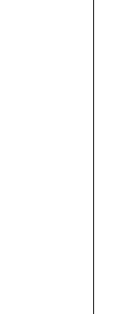

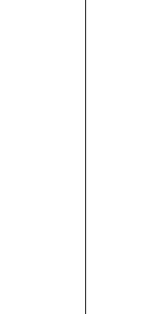

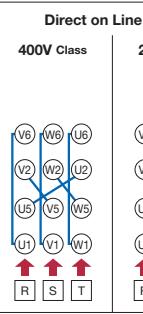

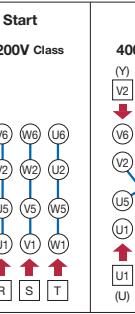

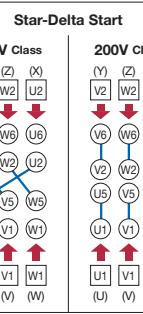

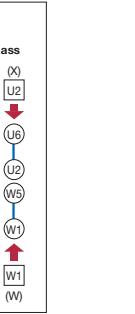

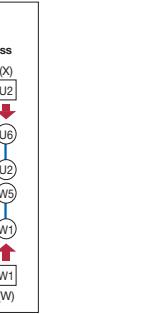

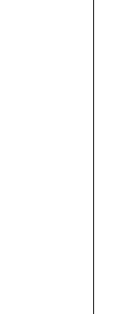

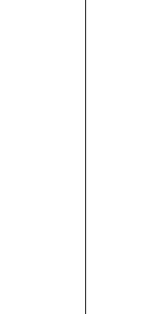

Item		Specifications
Standard		JIS C 4213 (Efficiency classes: JIS C 4034-30:2011 Premium efficiency class (IE3))
Construction		Totally enclosed fan-cooled types (Indoor and outdoor types)
Model	Foot mount	Indoor type TFO-LK(0.75~3.7kW), TFO-LKK(5.5kW~)
		Outdoor type TFOA-LK(0.75~3.7kW), TFOA-LKK(5.5kW~)
Output	Flange mount	Indoor type VTFO-LK(0.75~3.7kW), VTFO-LKK(5.5kW~)
		Outdoor type VTFOA-LK(0.75~3.7kW), VTFOA-LKK(5.5kW~)
Output	2 Poles	0.75~132kW
	4 Poles	0.75~132kW
	6 Poles	0.75~110kW
Heat-resistant class		155 (F) ※1
Rating		S1 (Continuous)
Protection		Indoor types:IP44 Outdoor types:IP55
Voltage / Frequency	2Poles	220/380V or 380/415V 50Hz
	4Poles	220/230V 60Hz 400V 50/60Hz, 440/460V 60Hz
Lead wire construction		Lug connection: 2 Poles 22kW~, 4 Poles 18.5kW~, 6 Poles 15kW~ ~ 5.5kW~ Available Y-△ starting
Number of lead wires		6: (5.5kW~) 12: 2 Poles 22kW~, 4 Poles 18.5kW~, 6 Poles 15kW~
Painting color		Rigail gray (munsell 8.9Y 5.1/0.3)
Transmission system		2Poles 11kW~: Direct coupling only 2Poles ~7.5kW and all of 4 Poles~: Direct or belt coupling
Rotation		Clockwise when viewed from the anti-load side
Environment	Temperature	-30~40°C
	Humidity	95%RH or less
	Altitude	1,000m or less
Atmosphere		No corrosive gas, no explosive gas, no steam, no dew condensation, and little dust

Note : Request a dimensional drawing to us for design use because the specifications may be subject to change.

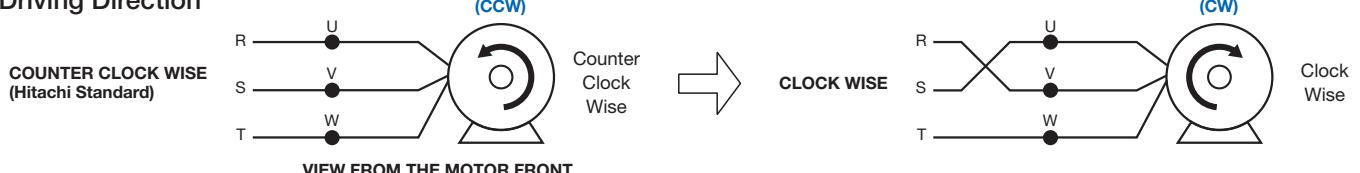

※1 Temperature rise : Frame size 112M or less class E, Frame size 132S~180M class B

Driving Direction

How to order the motors.

Model indication (Example):

xxHP (or kW) TFO-LK(LKK) xP IP55 + Voltage/Hz + Optional Spec.

| | |
Output Type No of pole

Please specify the model indication upon your inquiry when request.

Example : 3HP (or 2.2kW), 4pole, Foot Mount, Protection class IP55, Voltage 380V 50Hz

For new installation

3HP (or 2.2kW) TFO-LK 4P IP55 380V 50Hz

For replacement

3HP (or 2.2kW) TFO-LK 4P IP55 380V 50Hz + MFG No.

MFG No. (Manufacturing No.) is also need to check specifications

Model Explanation

Three-Phase

V T F O A - LK

Flange Mounted

V = Vertical shaft

Y = Horizontal shaft

Design
Three-phase Motor with
Cylindrical Rotor

LK = Ordinary Squirrel
cage rotor (<5HP)

LKK = Special Squirrel
cage rotor (>5HP)

A = Outdoor Type
(Installation outside of Building)

Totally enclosed with ventilating fan

T = Exterior design → Totally enclosed

F = Ventilation System → Ventilation Fan

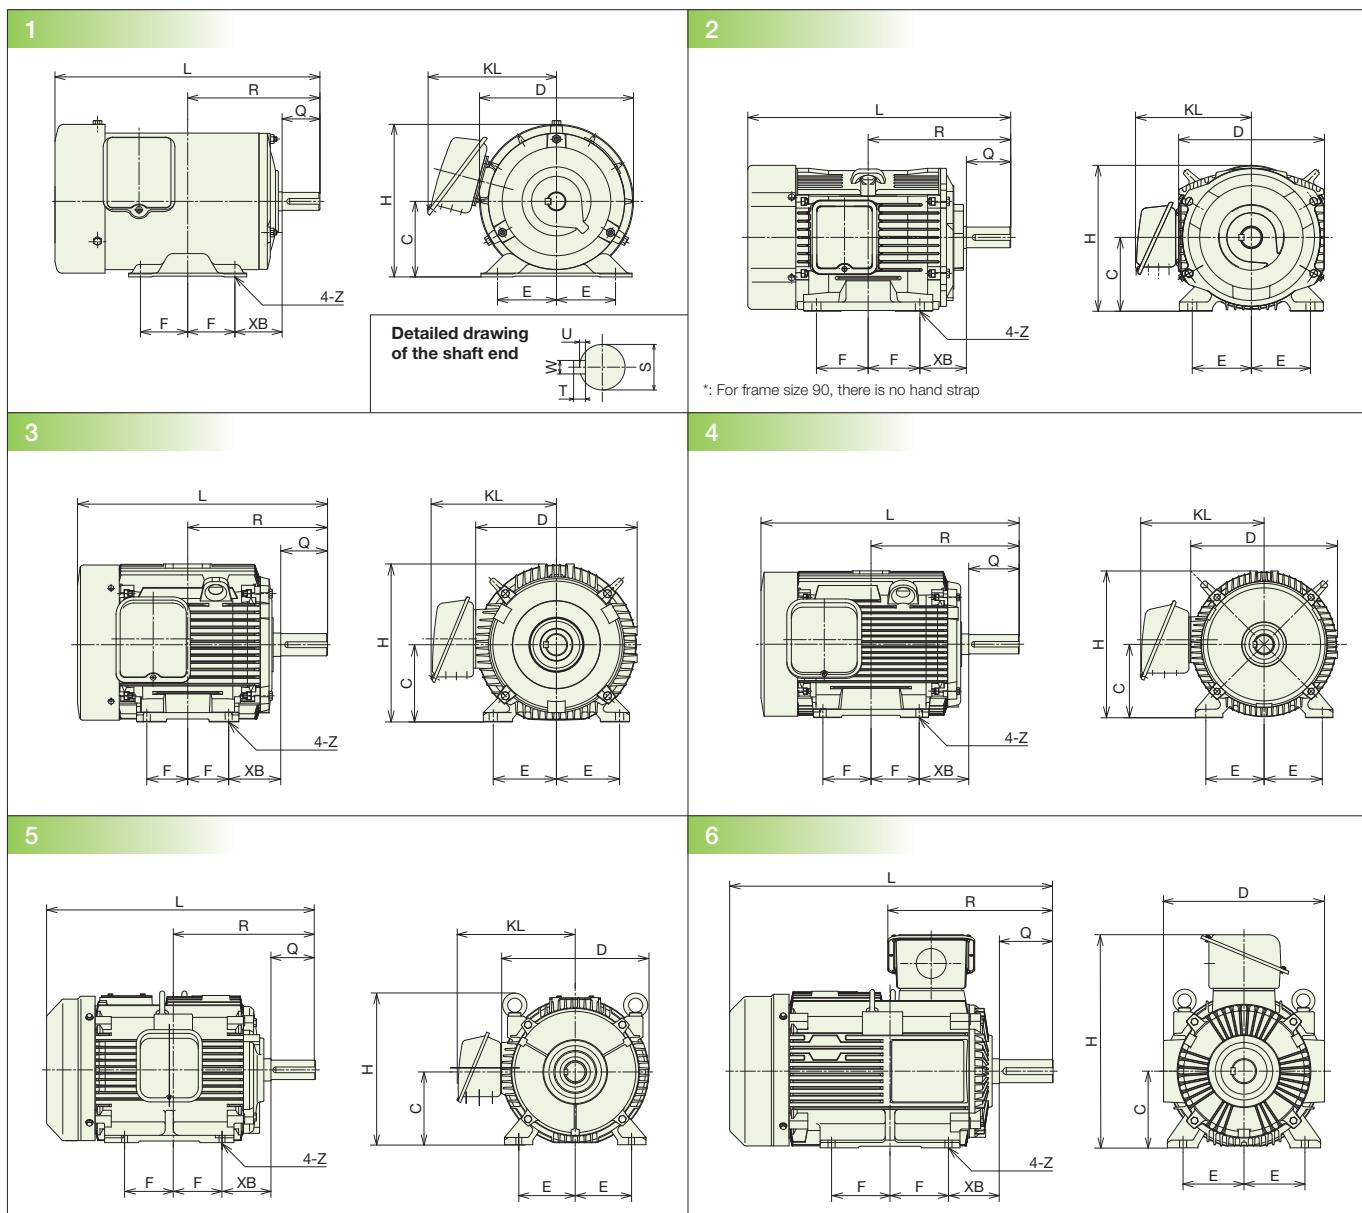

O = Bearing → Ball bearing, Pin Bearing

kW and HP comparable table

HP	1	2	3	5	7.5	10	15	20	25	30	40	50	60	75	100	120	150	175

Brake Motors

On Brake & Off Brake model
Brake model : HBA, FA, NA
Output : 0.2 ~ 30kW (in case 4 pole)

Gear Motors

GA/GH-series (For General load)
Output : 0.2 ~ 11kW 1/5 ~ 1/100

High-Pressure Blowers

Vortex Blower
E-series (Large air flow type)
G-series (High-pressure type)
DN-series (General type)

Water Pumps

JD Type : Circulation Pumps
JL Type : In-line Pumps
Output : 0.25kW ~ 11kW

Technical Managements

Special Instruction

[Inspect the machine before use]

- Please inspect the following area before turning on the switch ;
- Inspect if the following area are in ground wiring and insulation wiring,
 - Inspect preventive apparatus and control circuit if they are working properly.
 - Is the value of insulation resistance less than $1M\Omega$ or not.
 - Inspect if machine installation (direct belt) is correctly done.

[Precaution during use]

- Should be careful in loading capacity and frequency in turning on the machine. Machine should not be on for a long period of time.
- If the motor rotates in a wrong direction, in case of three-phase motor, swap the two wires. In case of single-phase motor, re-wiring following the connection circuit.
- Voltage Amp should be within a correct limitation.
 - Is voltage amp correct as indicated in the instruction manual ?
 - Is there any balance in voltage amp for three-phase line ?
 - Is the electrical distributed power higher than the indicated limitation? It should be adjusted to an appropriate loading capacity.
- Inspect to make sure there is no vibration sound and abnormal heating.

Outdoor Installation

- Use a motor that has a totally enclosed with cooling fan and can be placed outside a building. The motor can be installed outside because it can prevent any water droplets in between core structures. The terminal box should have water protection and seal that can prevent water coming into lead wire connection. Insulated wires can tolerate humidity and seal that can prevent water seeping into lead wire connection.
- You can connect wires in steel tubed connection on the side (For wire connection of motor outside the building, you should follow the instructional pictures in preventing rain from iron pipe seeping into the terminal box).
- General type of totally enclosed motor with cooling fan is IP44 class. If installing in high dust area, you can use IP54 class. In case having water injection into a machine, you can use IP55 class.

Maintenance

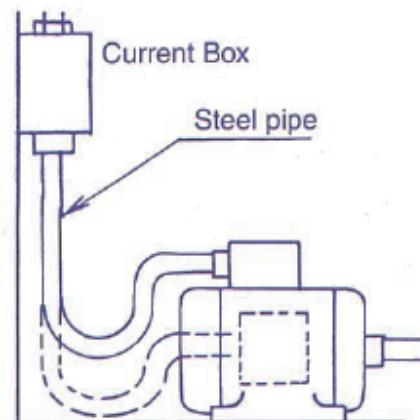

[Daily basis]

- Surrounding environment :
Inspect the temperature around the entire machine, humidity, dust, gas and ventilation system.
- Working essentials :
Inspect the electric distribution (loading capacity), frequency and voltage amp.
- Loading condition and machine connection :
Inspect the tension of connecting belt.
- Condition around machine connection area :
Vibration and sound for making sure if it's working properly.

[Periodic basis]

- Should be inspected
Bearings, insulating stator (no less than $1M\Omega$, looseness of any bolt and nut, colors, etc. Including inspection of motor condition if it's working correctly at least once a year.
