Recognized objects	Support detection of the following types of human postures: standing, running, squatting, moving forward, crawling, climbing, hatted, under umbrella, etc. Support the following types of vehicle recognition: bicycle, car, motorbike, bus, truck
Results Display	Support conditional display results according to specified objects
Behavior Detection	Density Detection:Support detecting the number of designated objects within a specific area, triggering an event and counting when the set quantity is exceeded.
	Prohibited Zone with counting:Support triggering an event and counting immediately when a designated object enters a restricted zone.
	Zone with Dwell with counting:Support triggering an event and counting when a designated object enters a restricted zone and remains there for a specified period of time.
	Tripwire with counting:Support triggering an event and counting when a designated object crosses a security line.
	AI missing object detection:Supports triggering an event when a specified object stays in a restricted area for a designated period of time, and also triggers an event when the object disappears or leaves the restricted area and meets the specified time criteria.
Counter Function	All Object Detection(AND):Support detecting and recognizing multiple designated objects within a specified recognition zone, and trigger an event when they are simultaneously present.
	Lack of any Object Detection (NAND):Support triggering an event when any of the specified objects is not present within the set detection zone (based on NAND rule)
	Counter:Support 8 counters that start counting when a specified object trigger(s) an event
	Reset value:Support setting the initial value of a counter(s), and the event trigger starts counting from the initial value
Recognition Speed	Operand:Expressions such as +1, -1, and = can be used as the counter counting method
	Reset Every:Counter(s) reset cycle can be set to: 1 minute, 5 minutes, 30 minutes, 1 hour, 1 day, 1 week, 1 month, etc., and the counter can be reset to the initial value according to the cycle
	Counter triggering >=:When performing density detection, the number of objects that trigger the event can be set (up to 300); when the number of recognized objects reaches the specified number, the event is triggered and the counter starts to count
Number of Detectable Objects	Support object recognition speed up to 6 frames per second
Video Resolution	Can detect up to 18 objects per frame
Object Filtering	Support up to 4K(3840 x 2160) resolution for image capture, 720P resolution is used for recognition
Event Trigger	Object Type:Support recognizing specified object, instead of processing all types of objects Object Size:Support 0~100% adjustable size of object (compared to frame) for classification Object Confidence Level:Support 0~100% adjustable confidence level of object
Detection Time	Support setting trigger by specific behaviors of specified objects. Support setting 8 Cold Zones to minimize false alarms and improve the accuracy
Minimum Recognition Resolution	After an event is triggered by specified object, the next detection will be carried out according to the set detection time (2~30 seconds)
Detection Zone / Tripwire	Support vehicle recognition at 80X80 pixels, person recognition at 80X100 pixels, and motorcycle/bicycle recognition at 80X100 pixels.
Polygon Detection	Support setting 4 detection zones (about the size of camera FoV) or lines which are influenced by independent filter condition (object size, confidence, dwell, classification and behavior) and to trigger independent events (output)
Pixel Count	Support detection zone which is a polygon that can be freely dragged and that the shape can be modified by 6 draggable anchor points. Support detection line which is a line attached to a polygon that the shape can be modified by 4 draggable anchor points. Also, direction of the line can be set by dragging the 4 anchor points or clicking the "Enable direction button"
Alarm Output	Support displaying the pixel count of selected object(s) on the web UI
Heartbeat Checking	Digital Output : Support triggering digital output of camera Smart Event : Support triggering up to 4 virtual inputs of camera HTTP POST : Support displaying an alarm on LILIN IP LED Panel / Support displaying an alarm on specific channel of LILIN Navigator VMS / Support triggering digital outputs for LILIN I/O Box / Support triggering digital outputs for LILIN NVR / Support triggering HTTP POST to integrate with third-party devices / Support triggering a PTZ camera to go to a preset
Recording System Integration	Support checking the camera AI operation status and pushing notifications every 1~30 minutes
Supported Cameras	Support event search to playback or snapshot on LILIN Navigator VMS and NVR
	LILIN Z6/P6 series cameras (excluding vehicle-mounted P6R37 series cameras)
