

The background of the entire page is a blurred image of a person's face, looking towards the camera. A large, thick, red diagonal swoosh cuts across the page from the top left to the bottom right, partially obscuring the background image.

CCTV & Security

Solution Company

www.jescqtec.com

Greetings >>>

It is of our great honor and pleasure to introduce ourselves to your esteemed customers.

JES CQtec has been in business for more than 30 years in the security field. Our main product is high-end Security Cameras and CCTV system. In addition, we are also specialized in other security appliances such as Access Control, Fire Alarm and Car Park System, etc.

Our service ranges from security design, installation, regular maintenance and after-sales service. With engineering manpower having high-technology and long experiences, we are always trying to give satisfaction to you.

We are the main distributor of IDIS brand for CCTV System, which is one of the best-selling around the world. We can also provide all CCTV brands by request of customers.

The first priority of our business is focused on making customers happy and satisfied. We are in a strong belief that our well-trained engineers and staffs would meet your needs and wants.

So far since opening, JES CQtec has continued to grow up in the industry and now, becomes one of the largest service providers of security equipment in Thailand. This was entirely enabled by support, interest and good advices from our customers. In this regard, we would like to express much gratitude to our valuable customers.

In the future as well, we will do our best to satisfy you and also hope to look forward to getting your advices. Our ears are always open to listen from you.

We sincerely wish prosperity and success of your business along with happiness of you and your family.

CCTV Security System

>>> Partner IDIS

◆ NDA Compliant Security Cameras

National Defense Authorization Act (NDA), effective August 13, 2019, explicitly section 889. This section outlines the prohibited utilization of certain video surveillance, telecommunications services, equipment and components manufactured by specific organizations.

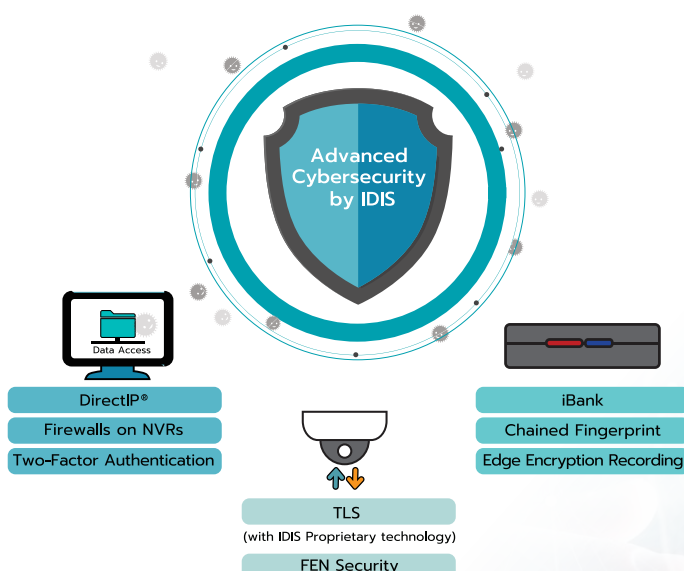

JES CQtec is committed to complying with all government and international trade regulations. JES CQtec offers NDA-compliance across IDIS product offerings, with many presently utilized in government, defense and a scope of commercial applications.

◆ NEXT Generation Video Management

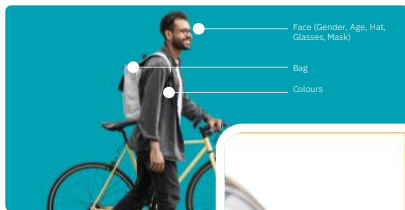

JES CQtec Solution is suitable for both large enterprise customers as well as surveillance operations for home security and small business. Born out of JES CQtec's deep understanding of the surveillance market and a huge range of customer applications, JES CQtec Solution is exceptionally scalable and flexible without the associated price tag. It offers the perfect solution for project-based rollouts as it features options for integration and the ability to transform surveillance and security operations to meet exact customer requirements.

◆ Cyber Security

JES CQtec has consistently and aggressively considered cybersecurity concerns from R&D through customer installation, developing a rich and comprehensive set of technologies and features to ensure maximum protection for end users of their popular end-to-end line of hardware and software solutions.

CCTV Intelligence Solution

24/7 Comprehensive Coverage

The system also boasts 99% accuracy in detecting intruders, minimizing false alarms.

Quick Response to Intrusions

AI camera detects an intrusion, it triggers local active deterrence measures in real-time and notifies. High-risk behavior smoking detection for public no-smoking area, call detection for petrol or gas station etc.

Face recognition

Function can be used for Stranger Detection in areas where only authorized personnel are allowed to be present.

Comprehensive

Focusing on human and vehicle. face recognition, stereo analysis, ANPR, etc.

Intrusion detection sensors

24/7

Monitoring is maintained 24 hours a day. The system possesses inherent flexibility, allowing for the configuration of notifications according to specific requirements.

Detection

There are many types of sensor systems, such as infrared beams that can distinguish between humans and animals. Detection is also possible through image analysis, vibration, and sound. Additionally, it can link or send signals to cameras to record footage when an event occurs.

Entrance-Exit System

Non-stop Access Experience **NEW**

ANPR technology that recognizes license plates in just 0.8 seconds

Visual Record & Search

Visual verification of alarmed events and efficient monitoring

Easy come, easy go

Helps you quickly find available parking spaces. Search the video and image by date/time/license plate.

Comprehensive surveillance

Provides 24/7 surveillance with access camera and guidance camera.

Access & Security Inspection

Video verification with X-ray imaging

X-ray images can be interoperable with video monitoring for cross-referencing and retrieval

Improving personnel entry

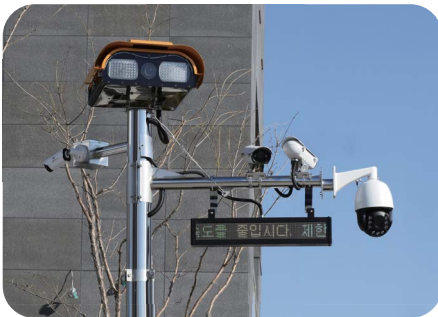

Fast egress relieves traffic pressures. Adds efficient management and maintenance. Provides visual verification of alarm events. Several authentication credentials: Face, ID cards, fingerprints, PIN codes, etc.

AI-based video security system specialized company

Smart Parking Control System

An integrated vehicle entry control system that extracts the license plates in the video using the camera installed at the entrance, stores the extracted license plates and entry records, and connects them to the installed peripherals (blockers, electronic displays, etc.) to separate and control internal and external vehicles.

AI Accident Prevention System

Integration of multi-purpose artificial intelligence crackdown Software (center program)

Parking Enforcement System

It is a system for monitoring and cracking down on parked vehicles in a no-parking zone in real time in the traffic situation room, and there are systems that enable fully automatic unmanned crackdown by detection method and that enable semi-automatic direct crackdown.

Video Monitoring Camera

The integrated fault management system, which is a real-time fault recovery system for on-site CCTV equipment, is the best product that has been prepared to maintain and manage all CCTV-equipped equipment for such as power, current, and humidity.

Electric Fence & Vibration

Electric Fence System

Electric fences are designed for perimeter security with a high voltage of 5-14 kV to prevent intruders.

Tension Fence System

A wire fence designed to monitor vibrations, prevent climbing, and can send alerts to a central unit if the wires are cut.

Tension Fence System

A wire fence designed to monitor vibrations, prevent climbing, and can send alerts to a central unit if the wires are cut.

Public Address System

Improved Efficiency

Since this is a network system that can also support analog devices such as speakers, it results in better operational efficiency than before.

Smart Public Address System

A public address system that supports scheduled announcements or event-triggered broadcasts, with the ability to link with devices such as cameras or various access control systems.

Accurate Notification System

A public address system connected to various sensors. In the event of an emergency, the system provides notifications to facilitate timely evacuations or problem-solving.

Control Center

Comprehensive Service

Includes LED and LCD display systems, monitors, control keyboards, and management service software.

24/7 Monitoring

Supports continuous 24-hour operation. Additionally, it features high-definition monitoring, diverse interface options, and an aesthetically pleasing design that is easy to use.

Storage System

Designed for IPSAN storage mode and direct video stream storage mode, allowing for extended recording durations.

Data Center & UPS Solution

Uninterruptible Power Supply System

The backup power unit utilizes energy from batteries. Multiple units can be connected to increase operational efficiency, and it includes a display screen or can be connected to a computer to show status.

Ventilation System

Designed for continuous 24-hour operation. It can effectively control humidity and includes an air filtration system to manage air circulation.

Large-Scale Storage System

The system utilizes high-performance servers capable of efficient processing. It can connect with various systems for data storage.

Fire Alarm System

Site Survey

Has a team of engineers to design an appropriate system, along with risk assessment and installation budgeting.

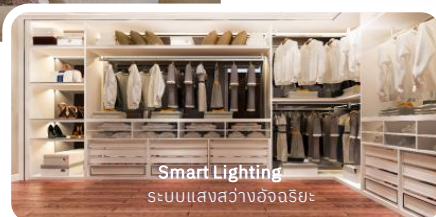

Design

The design utilizes specialized, world-class standard software for building and factory system design. It can design piping systems and calculate appropriate water pressure for fire suppression systems.

Safety

Supports over 30 international fire protection standards, such as EN12845, NFPA750, CEA400, and others.

Home Automation

Home Security

The backup power unit utilizes energy from batteries. Multiple units can be connected to increase operational efficiency, and it includes a display screen or can be connected to a computer to show status.

Ventilation System

Designed for continuous 24-hour operation. It can effectively control humidity and includes an air filtration system to manage air circulation.

Large-Scale Storage System

The system utilizes high-performance servers capable of efficient processing. It can connect with various systems for data storage

>>> References

Since 2009, We have been the sole service provider to Bangkok Bank, assuming responsibility for the Bank's CCTV system.

We have provided CCTV security services for headquarters and all branches of BANGKOK BANK. The sites call for perfect non-stopped operation of taking pictures and recording, in order to protect from robbery and other dangers. For this, JES CQtec is operating a special team ready to immediately send serviceman at any time.

We have been installing gas stations of PTT since 2010. Many gas stations in Bangkok and upcountry have been installed by us.

JES CQtec has been the main contractor for gas stations which are directly managed by PTT itself. Most stations were installed by IP class Cameras, as they need clearer picture image. We are providing regular services to maintain product quality.

>>> References

SOS Call Emergency Alert System

There are SOS emergency buttons located on various floors, which will send alerts to the central control room.

Dashboard Central Control System

Software for managing devices throughout the building, capable of displaying parking space status, access control device status, SOS status, and others.

Parking Guidance

A system that displays whether parking spaces are available or occupied, utilizing LED signage to indicate the number of available slots, and includes a vehicle search system via license plate recognition.

Gate Access Control Access Control System

At the internal entry and exit points of the building, there is a Visitor system used to define access permissions for users to specific floors and rooms. Cards can be issued from a kiosk or a service counter.

Lift Control

Inside the elevator, there is a floor-specific access control system. It functions only by tapping a card issued from a kiosk or a service counter.

Car Park

At the building's entrance and exit, there will be ticket dispensers and License Plate Recognition (LPR) cameras for Members and Visitors, along with a Payment system.

CIFS

Central Institute of
Forensic Science

Security Inspection System

Building's entry and exit points, there are security inspections such as baggage scanners using X-ray systems, similar to those used at airports or immigration checkpoints. There are also personnel scanners for detecting metals, weapons, or illegal items, with equipment that meets safety standards for pregnant women.

Access Control

In front of each room, there will be card readers and facial recognition scanners to verify identity and record entry and exit data.

CCTV System

A 24-hour surveillance system utilizing CCTV cameras that meet the **NDAA** standard, which is a United States standard. You can be confident in the security system, with cameras located both inside and outside the building to prevent incidents and collect data to be used as evidence when various situations occur.
