## LJTick-DAC Testing Utility

[Log in](#) or [register](#) to post comments

This application will allow you to configure and test [LJTick-DACs](#) attached to any UD family device (UE9, U3, or U6). While the actual cross platform Python script is contained in the [LabJackPython](#) package, we provide a stand-alone application for the convenience of our customers running Microsoft Windows.

If you get an error message that says something like “This application has failed to start because the application configuration is incorrect ...”, try downloading this update for your machine:

[x86 \(32-bit Windows\)](#)

[Link to Microsoft Downloads for 32-bit machines](#)

[x64 \(64-bit Windows\)](#)

[Link to Microsoft Downloads for 64 bit machines](#)

### **File Attachment:**

 [LJTickDAC.zip](#)
