**pneumatich**  
Pure air . Pure gas

# Compressed Air Treatment

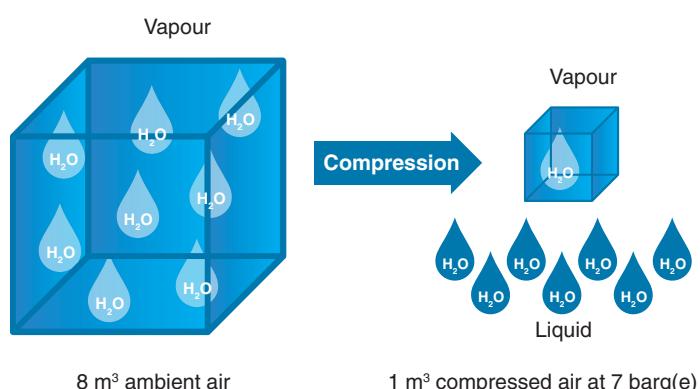

Untreated compressed air always contains contaminants because of the nature of the gas and how it is produced. The need for air treatment basically results from 3 characteristics of compressed air.

## Contaminants

- Liquid water - water aerosols - water vapor

## How are the contaminants formed?

As water is incompressible, the amount of moisture per m<sup>3</sup> increases when air is compressed. The maximum amount of moisture per m<sup>3</sup> air<sup>1</sup> is however limited for a certain temperature. Condensation will thus be formed when air is compressed.

## What problems can the contaminants cause?

- Corrosion of pipe lines
- Bad quality of the end product
- Malfunctioning of controls
- Build-up of ice
- Cultivation of micro-organisms

## The Pneumatech solution

- Water separators
- Drains
- Refrigeration dryers
- Adsorption dryers

<sup>1</sup>The so-called holding capacity of moisture in air.

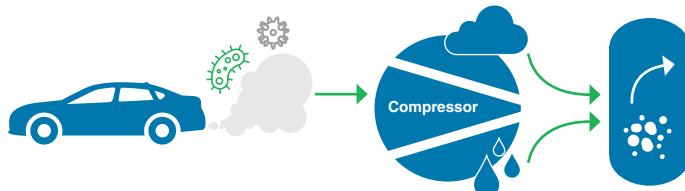

## Contaminants

- Liquid oil - oil aerosols - oil vapor
- Dirt - microorganisms - pipescale
- Trace gases: carbon monoxide, sulfur dioxide, nitrous oxide

## How are the contaminants formed?

Added by the compressor installation through oil lubricated compressors (oil), adsorption dryers and activated carbon filters (dirt), piping network and vessels (pipescale).

Trash in, trash out: oil vapors from car exhausts and industrial processes, atmospheric dirt and micro-organisms get sucked in by the compressor. As with water, their concentration – and thus importance – increases significantly after compression.

## What problems can the contaminants cause?

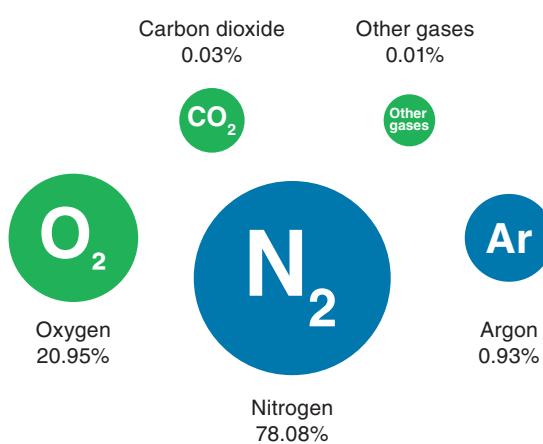

- Damaged production equipment, leading to inefficiencies and increased costs
- Air pollution, creating unhealthy work environments
- Pollution of the condensate

## Contaminants

- Oxygen: contaminant if oxidation is unwanted
- Nitrogen: contaminant if oxidation is wanted

## How are the contaminants formed?

Dry air is mainly composed of nitrogen (78%) and oxygen (21%). Air will keep the same nitrogen/oxygen ratio after compression, so additional treatment is needed to change this gas mix.

## What problems can the contaminants cause?

- Oxygen causes oxidation, leading to explosions or fire of flammables (fast oxidation) or to rotting processes and corrosion of metals (slow oxidation).
- Nitrogen is an inert gas that can prevent oxidation to happen.

## The Pneumatech solution

- Coalescing filters for oil aerosols/particles
- Oil vapor filters
- Dust filters
- Oil-water separators
- Breathing air units

## The Pneumatech solution

- PSA nitrogen generators
- Membrane nitrogen generators
- PSA oxygen generators

# AD-series Refrigerant Dryer

## AD-series Refrigerant Dryer

- Optimized design, prevent the condensed water into compressed air system

## Cost Saving

- Long maintenance intervals, reduce the downtime and maintenance times
- Improve the service-life and reliability of pneumatic instruments and devices
- Reduce the pipeline leakage and energy consumption
- Reduce the possibility that the final product quality be effected by moisture

## Safe & Reliable

- Redundant design, high quality component
- Highly efficient cooling system control (hot air by-pass)

## Easy Installation

- Install and run
- Optimized structure, easy to install
- Single electric interface, automatic load adjustment

Pressure  
Dew Point  
7-10°C

Operating Pressure						7 bar(100psi)			
Operating Temperature						35°C			
Room Temperature						25°C			
Limit Conditions									
Max Operating Pressure						13 bar(188psi)			
Max/Min Operating Temperature						55°C			
Max Room Temperature						5°C/45°C			

# PRIMAK D-series Refrigerant Dryer

## Precise dryness to meet your actual production requirements

- Excellent water separation efficiency and high heat dissipating capacity ensures PDP performance.

## More energy saving system to improve your production efficiency

- Compared to the shell & tube refrigerant cooler, the HE with energy recycle system can reduce the energy consumption by 50%
- R410A refrigerant, energy saving and environment friendly.

## Proper dimension and minimum installation space

- Integrated design makes full use of spaces to maximize the area occupied
- Flexible placement allowed backside to the wall

## More reliable operation saves maintenance

- The cooling compressor with imported industrial-class motor
- HGB& Capillary system to keep the long-term stable operation
- Automatic assembly on flowline ensures the reliability of connections
- Strict factory inspection and pressure test ensure long-time and reliable operation

Design Standards	PRIMAK D10-21	PRIMAK D40-260
Dew Point	10°C	10°C
Pressure Range	4-13 bar / 60-188 psi	4-13 bar / 60-188 psi
Voltages	230V	230V
Frequency	50Hz	50Hz
Controller	Basic	Basic
Technology	Refrigerant R134a	Refrigerant R410A
Usage	Continuous	Continuous
Common Applications	Automotive, General Industry	Automotive, General Industry, Wood, Paper, Cement, Mining

Correction Factor	0.90	0.97	1.00	1.03	1.06	1.08
	11	12	13			

Primak D design working condition: environment temperature 25°C. intake temperature 35°C. The maximal pressure drop: less than 0.35bar.

The new flow rate value can be obtained by dividing the current or real flow rate by the correction factor related to the real operation conditions.

# Compressed Air Filters

## Pneumatech Pride

For over 40 years, Pneumatech products have provided complete solutions for all of our customers' filtration needs. Today, we're very proud to continue that legacy with our newest line of enhanced filtration systems and replacement elements – all in stock and ready to ship.

In the Pneumatech product range, we can deliver compressed air filters in dual offer with the PEF (Economic) and the PPF (Professional) variants.

### Reference conditions:

Compressed air inlet pressure: 7bar (g) 102 psig

Compressed air inlet temperature: 1 oC/33.8oF

Important features and benefits
Enhanced high-performance filter cores ensure ultimate strength and low risk of implosion
New, enhanced filter design to ensure high filter efficiency, low pressure drop and guaranteed lifetime performance
Optimized head design for low pressure drop
Robust and extremely easy to maintain
Cartridge labeling color based on type of filtration grade, makes it easy to service
